

JN0-683 Training Online & New Exam JN0-683 Braindumps

2026 Latest VCEdumps JN0-683 PDF Dumps and JN0-683 Exam Engine Free Share: https://drive.google.com/open?id=1gYTKGEzPFA1K8B8zFV_oM9qu0HxSwE5d

In our lives, we will encounter many choices. Some choices are so important that you cannot treat them casually. The more good choice you choose in your life, the more successful you are. Perhaps our JN0-683 exam guide can be your correct choice. Our study guide is different from common test engine. Also, the money you have paid for our JN0-683 Study Guide will not be wasted. We sincerely hope that our test engine can teach you something. Of course, you are bound to benefit from your study of our JN0-683 practice material.

Juniper JN0-683 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • EVPN-VXLAN Signaling: This section assesses an understanding of Ethernet VPN (EVPN) concepts, including route types, multicast handling, and Multiprotocol BGP (MBGP). It also covers EVPN architectures like CRB and ERB, MAC learning, and symmetric routing.
Topic 2	<ul style="list-style-type: none"> • Data Center Multitenancy and Security: This section tests knowledge of single-tenant and multitenant data center setups. Candidates such as Data Center Professionals are evaluated on ensuring tenant traffic isolation at both Layer 2 and Layer 3 levels in shared infrastructure environments.
Topic 3	<ul style="list-style-type: none"> • Data Center Deployment and Management: This section assesses the expertise of data center networking professionals like architects and engineers, focusing on key deployment concepts. Topics include Zero-touch provisioning (ZTP), which automates device setup in data centers without manual input.
Topic 4	<ul style="list-style-type: none"> • Data Center Interconnect: For Data Center Engineers, this part focuses on interconnecting data centers, covering Layer 2 and Layer 3 stretching, stitching fabrics together, and using EVPN-signaled VXLAN for seamless communication between data centers.

Best Juniper JN0-683 Training Online Help You Pass Your Juniper Data Center, Professional (JNCIP-DC) Exam From The First Try

You will feel convenient if you buy our product not only because our JN0-683 exam prep is of high pass rate but also our service is also perfect. What's more, our update can provide the latest and most useful JN0-683 exam guide to you, in order to help you learn more and master more. We provide great customer service before and after the sale and different versions for you to choose, you can download our free demo to check the quality of our JN0-683 Guide Torrent before you make your purchase. You will never be

disappointed for buying our JN0-683 exam questions.

Juniper Data Center, Professional (JNCIP-DC) Sample Questions (Q63-Q68):

NEW QUESTION # 63

You are asked to automatically provision new Juniper Networks devices in your network with minimal manual intervention. Before you begin, which two statements are correct? (Choose two.)

- A. You must have an NTP server to perform time synchronization.
- B. You must have a DHCP server that provides the location of the software image and configuration files.
- C. You must have a system log (syslog) server to manage system log messages and alerts.
- D. You must have a file server that stores software image and configuration files.

Answer: B,D

Explanation:

* Zero-Touch Provisioning (ZTP):

* ZTP is a feature that allows for the automatic provisioning of devices with minimal manual intervention. It is widely used in large-scale deployments to quickly bring new devices online.

* Key Requirements for ZTP:

* A. DHCP Server: A DHCP server is crucial for ZTP as it provides the necessary information to new devices, such as the IP address, the location of the software image, and configuration files.

* D. File Server: The file server is where the software image and configuration files are stored. The device downloads these files during the provisioning process.

* Incorrect Options:

* B. Syslog Server: While a syslog server is important for logging and monitoring, it is not a requirement for the initial provisioning process.

* C. NTP Server: An NTP server is used for time synchronization, which is essential for accurate logging and operation but not specifically required for ZTP.

Data Center References:

* ZTP simplifies the deployment process by automating the initial configuration steps, relying heavily on DHCP for communication and a file server for delivering the necessary configuration and software.

NEW QUESTION # 64

Which three statements are correct about symmetric IRB routing with EVPN Type 2 routes? (Choose three.)

- A. Symmetric routing requires MAC-VRF.
- B. Symmetric routing is less efficient than asymmetric routing.
- C. An L3 interface (IRB) is required for each local VLAN.
- D. Symmetric routing supports the EVPN service VLAN bundle.
- E. Symmetric routing requires an extra transit VNI for each VRF.

Answer: A,C,E

Explanation:

* Symmetric IRB Routing with EVPN Type 2 Routes:

* Symmetric Routing: In symmetric IRB (Integrated Routing and Bridging), routing occurs in both directions at the ingress and egress leaf nodes using the same routing logic. This is contrasted with asymmetric routing, where different routing logic is used depending on the direction of the traffic.

* Required Components:

* Option A: An L3 IRB interface is necessary for each VLAN that participates in routing, as it handles the Layer 3 processing for the VLAN.

* Option B: MAC-VRF is required for symmetric routing to maintain a mapping of MAC addresses to the appropriate VRF, ensuring correct forwarding within the EVPN.

* Option D: A transit VNI (Virtual Network Identifier) is required for each VRF to encapsulate the Layer 3 traffic as it traverses the network, allowing the IP traffic to be appropriately forwarded.

Conclusion:

* Option A: Correct-Each local VLAN needs an IRB interface for L3 processing.

* Option B: Correct-MAC-VRF is necessary for handling MAC address resolution in symmetric routing.

* Option D: Correct-Transit VNIs are required for routing VRF-specific traffic across the network.

Options CandE are incorrect because:

- * C: Symmetric routing can work with various VLAN models, including single or multiple VLANs within an EVPN instance.
- * E: Symmetric routing is generally more efficient than asymmetric routing as it uses consistent routing logic in both directions.

NEW QUESTION # 65

You are asked to configure telemetry on the OFX Series devices in your data center fabric. You want to use sensors that have a vendor-neutral data model. Which type of sensor should you use in this scenario?

- **A. JTI OpenConfig sensors**
- B. JTI native sensors
- C. Python sensors
- D. analog sensors

Answer: A

Explanation:

* Telemetry in Data Centers:

* Telemetry allows for real-time monitoring of network devices by collecting and exporting data such as interface statistics, routing table updates, and other key metrics.

* Vendor-Neutral Data Models:

* Option A: JTI (Junos Telemetry Interface) OpenConfig sensors use a vendor-neutral data model, which is important for ensuring compatibility across different network devices and systems.

OpenConfig is an industry-standard model, which facilitates integration with various telemetry collection systems.

Conclusion:

* Option A: Correct - OpenConfig sensors provide a vendor-neutral solution for telemetry, ensuring broad compatibility and flexibility in data center environments.

NEW QUESTION # 66

You are asked to deploy 100 QFX Series devices using ZTP. Each QFX5120 requires a different configuration.

In this scenario, what are two components that you would configure on the DHCP server?

(Choose two.)

- A. the MAC address of the FTP server
- **B. the IP address of the FTP server**
- C. the MAC address for each QFX5120
- **D. the management IP address for each QFX5120**

Answer: B,D

Explanation:

The IP address of the FTP server: In a Zero Touch Provisioning (ZTP) deployment, the DHCP server needs to provide the IP address of a server (such as an FTP or TFTP server) that holds the configuration files or software images required for the device. The QFX devices will reach out to this server during the boot process to download their necessary configuration and images.

The management IP address for each QFX5120: The DHCP server should also provide the management IP address for each QFX5120, allowing the devices to connect to the network and communicate with the ZTP server for configuration.

NEW QUESTION # 67

You are asked to deploy 100 QFX Series devices using ZTP. Each OFX5120 requires a different configuration. In this scenario, what are two components that you would configure on the DHCP server?

(Choose two.)

- **A. the MAC address for each OFX5120**
- **B. the management IP address for each OFX5120**
- C. the MAC address of the FTP server
- D. the IP address of the FTP server

Answer: A,B

Explanation:

* Zero Touch Provisioning (ZTP):

* ZTP allows for the automated configuration of network devices, like QFX Series switches, without manual intervention. During ZTP, a switch will obtain its configuration from a DHCP server and then download the required software and configuration files from a specified server (e.g., FTP, HTTP).

* DHCP Server Configuration:

* Option B: The DHCP server needs to know the MAC address for each QFX5120 to provide a specific configuration based on the device identity. By mapping the MAC address to a particular configuration, the DHCP server can ensure that each switch gets the correct configuration.

* Option D: The management IP address for each QFX5120 must also be assigned by the DHCP server. This IP address allows the device to communicate on the network and access the configuration files and other required resources during the ZTP process.

Conclusion:

* Option B: Correct-MAC addresses allow the DHCP server to identify each QFX5120 and assign the appropriate configuration.

* Option D: Correct-Management IP addresses are essential for network communication during ZTP.

NEW QUESTION # 68

.....

By offering the most considerate after-sales services of JN0-683 exam torrent materials for you, our whole package services have become famous and if you hold any questions after buying Data Center, Professional (JNCIP-DC) prepare torrent, get contact with our staff at any time, they will solve your problems with enthusiasm and patience. They do not shirk their responsibility of offering help about JN0-683 Test Braindumps for you 24/7 that are wary and considerate for every exam candidate's perspective. Understanding and mutual benefits are the cordial principles of services industry. We know that tenet from the bottom of our heart, so all parts of service are made due to your interests.
