Microsoft learning site Introduction to PowerApps

Microsoft Power Platform Functional Consultant Sample Questions (Q73-Q78):

NEW QUESTION # 73

You are creating a model-driven app that has an embedded Power BI report. Another functional consultant set up an environment variable for the report.

You add the dashboard to a solution in the development environment and then import the changes to a production environment as a managed solution.

When you test the report, the data appears the same as it did in the development environment.

You delete the solution in production.

You need to resolve the development environment issue before redeploying the solution.

What should you do?

- A. Remove the environment variable current value.
- **B. Update the environment variable current value**
- C. Create a new environment variable.
- D. Update the environment variable default value.

Answer: B

NEW QUESTION # 74

You create a Power Apps app for Microsoft Teams using Microsoft Dataverse for Teams. Users report that they are unable to view the app in Teams. You need to ensure that users can access the app. What should you do?

- **A. Request that a tenant administrator pin the app to the app bar in Teams.**
- B. Share the app with individual users by using the Maker portal.
- C. Share the app with a security group in Teams.
- D. Publish the app by using the Maker portal.
- E. Share the app with a security group by using the Maker portal.

Answer: A

Explanation:

When you create a Power Apps app for Microsoft Teams using Microsoft Dataverse for Teams, the app needs to be added to the app bar in Teams before it can be accessed by users. This can only be done by a tenant administrator. To ensure that users can access the app, you would need to request that the tenant administrator pin the app to the app bar in Teams.

Sharing the app with a security group by using the Maker portal (A) or in Teams (B) would allow users in that group to access the app, but they would still need to be able to find and open the app.

Here are some references from Microsoft that may be helpful in understanding how to make Power Apps app available in Teams:

Microsoft docs: Add a Power Apps app to a Microsoft Teams channel

Microsoft docs: Pin a Power Apps app to the app bar in Microsoft Teams

Microsoft docs: Distribute Power Apps for Microsoft Teams

NEW QUESTION # 75

Drag and Drop Question

A customer has a support website that includes FAQ pages, knowledge articles, and support content.

You plan to leverage an existing Power Virtual Agents bot to enhance and streamline existing support functionality for the existing support portal.

You need to create topics from existing website content. The process must minimize human errors during topic creation.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer

area and arrange them in the correct order.

Answer:

Explanation:

Explanation:

You can use content from existing webpages when creating a Power Virtual Agents bot. This is useful if you already have help or support content, such as FAQ pages or support sites.

There are three main steps to using the feature:

1. Select Suggest topics on the Topics page to extract content from FAQ/support pages or online files.
2. Add the suggested topics to your bot.
3. Enable the topics.

NEW QUESTION # 76

You are a Dynamics 365 Customer Service administrator.

You need to configure the following automation for the sales team:

- * Send an email when the status changes on an Opportunity.
- * Text the sales manager when an Opportunity is created.
- * Create a Wunderlist task when an Opportunity is open for 30 days.

Which tool should you use for each requirement? To answer, select the appropriate options in the answer area.

NOTE Each correct selection is worth one point.

Answer:

Explanation:

Explanation

NEW QUESTION # 77

You need to design the chat solution to answer the inquiry from Guest1.

Which three components can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Variables
- B. Topics
- C. Smart match
- D. Escalations
- E. Synonyms

Answer: A,C,E

Explanation:

Scenario: Guest1 inquires about snow conditions several times during each day of their stay.

Variables let you save responses from your customers in a conversation with your bot so that you can reuse them later in the conversation.

Synonyms allows you to manually expand the matching logic by adding synonyms. Smart match and synonyms seamlessly work together to make your bot even smarter.

Topic 2, ADatum Corp.

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Background

ADatum Corporation provides verification and investigation services that are used by insurance companies, law firms, and other organizations in the public sector. Services include verifying an individual's background, qualifications, and specific scenarios that require onsite visit.

The thorough work ADatum Corporation performs results in highly accurate cases with minimal critical information missing. Because of these high-quality results, ADatum Corporation is quickly proving itself as one of the best in the industry. In recent months, business has significantly increased, with most new business coming from high-profile companies and individuals.

Management has decided to create a new qualification verification (QV) role to help ensure that clients get the most accurate results. This role examines completed work to ensure that nothing is missed.

Current environment

Data storage and retention

- * All information sent by clients for services is stored in Microsoft Dataverse with a model-driven app as the interface.
- * Clients enter their data in a website, which then uses a service account to create the records in the Dataverse database.
- * Team members currently have full access to all Service Request records.

Service requests

- * The Service Request table includes header information about the individual or organization that is the subject of verification.
- * New Service Request records are assigned to a queue. All potential users who will be performing the verifications have access to these records.
- * A service request is assigned to a single user who will ensure that all qualifications are verified. This single user is the only one able to process Qualification records related to their own service requests.
- * Many required tasks when performing verification services are currently done by using manual processes.
- * To keep up with demand, ADatum Corporation identifies several processes that can be replaced by using Power Automate flows to hire fewer new staff and keep costs down.

Qualification verification

- * The qualification table contains details about an individual school degree, professional qualifications, and other qualifications that must be verified.
- * A service request can have one or more Qualification records associated with it.
- * Record status is pending verification until the initial team member finishes, at which point the member changes the status to Complete.
- * When all qualification records related to a service request are verified either by manual or automated processes, the results are made available to ADatum Corporation's client.
- * In the rare event that results are questioned, a new service request is created and verified independently of the previous work that took place.
- * To complete a service request, users perform the following actions:
 - * Send a templated email by using Microsoft Outlook to the client after all qualifications for a service request are checked.
 - * Change the service request status to Completed. Currently, service requests do not indicate when all Qualification records are addressed.

Microsoft Power platform environment

- * The following environments exist: development, testing, user acceptance testing (UAT), and production.
- * Managed solutions are used to move customizations from the development environment to other higher-level environments. These solutions are created and maintained by the power users and provided to internal IT for deployment when they are ready.
- * Two managed solutions, Verification Process Automation and Onsite Visit, share several components.
- * All customizations to Power Platform components are performed by several power users who have received training and are certified as subject matter experts.
- * Power users have been granted the System Administrator security role in the development environment.
- * Corporate policy prohibits power users from writing code due to lack of a formal code review process.
- * Internal IT will not be able to supply any development resources for this project due to a lack of staff.

This means that any customizations and automation created for this project must be low-code/no-code for the power users to implement them.

- * Customizations created by power users are deployed by internal IT.

Requirements

Process automation

ADatum Corporation plans to establish a new QV department to verify completed work so that the quality of work is maintained.

The new process for verifying professional qualifications must automate the following:

- * Enter data and navigate the authority's website. The authority website UI changes frequently because the company constantly improves the user experience.
- * Search page contents for a specified value to determine validity.
- * Update the corresponding Qualification record in Dataverse.

The new process for completing a service request must automate the following:

- * Set the Service Request record status to Complete when work on all Qualification records is finished.
- * Send an email to the client with the results when the service request is completed. The email must list each qualification as either Valid or Not Valid, depending on the verification.

Qualification verification

Service request results will not be released to clients until all related Qualification records are set to a Complete status.

- * To check work done by a wide array of users, 10 percent of Qualification records must be double checked.
- * Qualification records must be automatically assigned to a queue.
- * Qualification records must be flagged with a new status field named Assigned to ensure that records are rechecked.
- * Ensure that only QV team members can change the status from Assigned to In Progress to Complete.
- * Record the name of the QV team member who performed the work and the date completed.

Governance and security

- * All components required for the verification process must be included in a new solution.
- * Corporate security requires that deployments to non-development environments must be automated using service accounts.
- * User security and data access must also be consistent across environments, except for the elevated access of the power users in the development environment.
- * The Onsite Visit managed solution has a table that is not in the Verification Process Automation managed solution. This table must be upgraded prior to the go-live date without the other shared components.
- * A VP of sales requires a test environment to demonstrate to potential clients the security policies that are included in their initial offering.

Issues

- * More employees than are required can access individual client information and continue to have access after a service request is completed.
- * When users go on vacation, all their outstanding Service Request records are assigned to a substitute employee. The substitute employees are unable to see all the qualifications related to their service requests.
- * Currently, testing the new QV functionality outside the development environment is not possible due to corporate security policies requiring the same security role across all environments.
- * Internal IT reports that the solution import to the test environment failed because of missing dependencies related to the flow for completing service requests.
