

Administering Information Security in Microsoft 365 Actual Test Guide Boosts the Function to Simulate the Exam - Prep4SureReview

2026 Latest Prep4SureReview SC-401 PDF Dumps and SC-401 Exam Engine Free Share: <https://drive.google.com/open?id=1is9tQdOdWxP7GgMWtwFdKvOfQIUHGEh>

The web-based Administering Information Security in Microsoft 365 (SC-401) practice exam is accessible from any major OS, including Mac OS X, Linux, Android, Windows, or iOS. These Microsoft SC-401 exam questions are browser-based, so there's no need to install anything on your computer. Chrome, IE, Firefox, and Opera all support this Microsoft SC-401 web-based practice exam. You can take this Administering Information Security in Microsoft 365 (SC-401) practice exam without plugins and software installation.

Microsoft SC-401 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Manage Risks, Alerts, and Activities: This section assesses Security Operations Analysts on insider risk management, monitoring alerts, and investigating security activities. It covers configuring risk policies, handling forensic evidence, and responding to alerts using Microsoft Purview and Defender tools. Candidates must also analyze audit logs and manage security workflows.
Topic 2	<ul style="list-style-type: none"> • Protect Data Used by AI Services: This section evaluates AI Governance Specialists on securing data in AI-driven environments. It includes implementing controls for Microsoft Purview, configuring Data Security Posture Management (DSPM) for AI, and monitoring AI-related security risks to ensure compliance and protection.
Topic 3	<ul style="list-style-type: none"> • Implement Information Protection: This section measures the skills of Information Security Analysts in classifying and protecting data. It covers identifying and managing sensitive information, creating and applying sensitivity labels, and implementing protection for Windows, file shares, and Exchange. Candidates must also configure document fingerprinting, trainable classifiers, and encryption strategies using Microsoft Purview.
Topic 4	<ul style="list-style-type: none"> • Implement Data Loss Prevention and Retention: This section evaluates Data Protection Officers on designing and managing data loss prevention (DLP) policies and retention strategies. It includes setting policies for data security, configuring Endpoint DLP, and managing retention labels and policies. Candidates must understand adaptive scopes, policy precedence, and data recovery within Microsoft 365.

Free PDF Microsoft - Newest SC-401 New Exam Braindumps

Are you sometimes nervous about the coming SC-401 exam and worried that you can't get used to the condition? Never worry, we can offer 3 different versions for you to choose: PDF, Soft and APP versions. You can use the Soft version of our SC-401 study materials to stimulate the exam to adjust yourself to the atmosphere of the real exam and adjust your speed to answer the questions. The other 2 versions also boost their own strength and applicable method and you could learn our SC-401 training quiz by choosing the most suitable version to according to your practical situation.

Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q59-Q64):

NEW QUESTION # 59

Hotspot Question

You have a Microsoft 365 subscription that contains a sensitivity label named Contoso Confidential.

You publish Contoso Confidential to all users.

Contoso Confidential is configured as shown in the Configuration exhibit. (Click the Configuration tab.)

New sensitivity label

- ✓ Label details
- ✓ Scope
- ✓ Items
- ✓ Groups & sites
- ✓ Schematized data assets (preview)
- Finish**

Review your settings and finish

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
If a user account is disabled, the user will be immediately prevented from opening a file protected by Contoso Confidential.	<input type="radio"/>	<input type="radio"/>
Guest users will be able to open documents protected by Contoso Confidential.	<input type="radio"/>	<input type="radio"/>
Contoso Confidential will be applied automatically to the files stored in Microsoft SharePoint. Online.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Answer Area

Statements	Yes	No
If a user account is disabled, the user will be immediately prevented from opening a file protected by Contoso Confidential.	<input type="radio"/>	<input checked="" type="radio"/>
Guest users will be able to open documents protected by Contoso Confidential.	<input type="radio"/>	<input checked="" type="radio"/>
Contoso Confidential will be applied automatically to the files stored in Microsoft SharePoint. Online.	<input type="radio"/>	<input checked="" type="radio"/>

NEW QUESTION # 60

Hotspot Question

You have a Microsoft 365 E5 subscription.

From the Microsoft Purview Data Security Posture Management for AI portal, you review the recommendations for AI data security.

You plan to create a one-click policy to block elevated risk users from pasting or uploading sensitive data to AI websites.

How will the policy be configured? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

The policy mode will be configured to use:

- Test it out first
- Turn it on right away
- Keep it off

The policy will apply to:

- Devices only
- SharePoint sites only
- Instances only
- Devices and SharePoint sites
- Devices, Instances, and SharePoint sites

Answer:

Explanation:
Answer Area

The policy mode will be configured to use:

A screenshot of a dropdown menu with three options: "Test it out first" (highlighted in green), "Turn it on right away", and "Keep it off".

The policy will apply to:

A screenshot of a dropdown menu with five options: "Devices only" (highlighted in green), "SharePoint sites only", "Instances only", "Devices and SharePoint sites", and "Devices, Instances, and SharePoint sites".

Explanation:

Box 1: Test it out first

To configure the policy that blocks elevated risk users from uploading or pasting sensitive data to AI websites, you will configure the policy in "Test" mode within the Microsoft Purview portal to begin with, and then change it to a block-with-override mode to enforce protection on risky users for the relevant web browsers.

Box 2: Devices only

* Devices - Yes

Policies within Microsoft Purview's Data Security Posture Management for AI (DSPM for AI) can apply to user devices, specifically through Endpoint data loss prevention (DLP), which monitors and can block sensitive data from being pasted or uploaded to third-party AI sites accessed via browsers on those devices. This is achieved by onboarding Windows computers to Microsoft Purview and configuring Endpoint DLP policies to detect and prevent sharing sensitive information through the browser.

NEW QUESTION # 61

You have a Microsoft 365 E5 subscription that uses Microsoft Defender for Cloud Apps.

You plan to deploy a Defender for Cloud Apps file policy that will be triggered when the following conditions are met:

A file is shared externally.

A file is labeled as internal only.

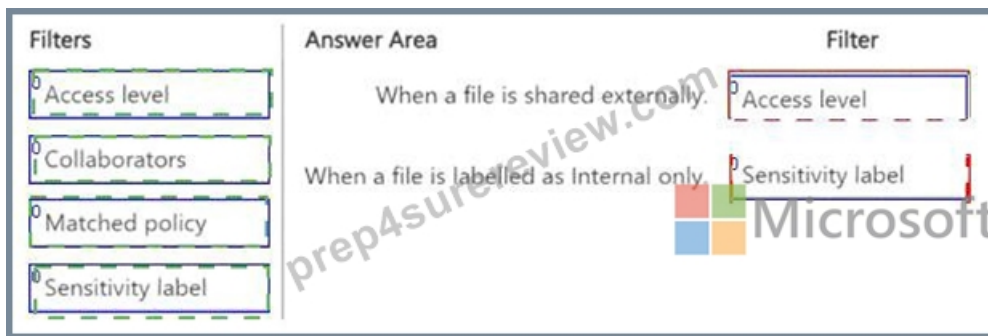

Which filter should you use for each condition? To answer, drag the appropriate filters to the correct conditions. Each filter may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

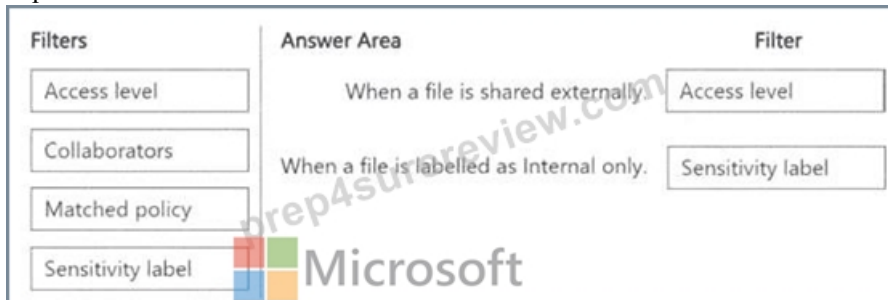

A screenshot of a drag-and-drop interface. On the left, under the heading "Filters", there are four items: "Access level", "Collaborators", "Matched policy", and "Sensitivity label", each with a small circle icon. On the right, under the heading "Filter", there are two empty rectangular boxes. The text "When a file is shared externally." is positioned above the first box, and "When a file is labelled as internal only." is positioned above the second box. A watermark "Microsoft" and "prep4surereview.com" are visible in the background.

Answer:

Explanation:

Explanation:

In Defender for Cloud Apps file policies, Access level is the filter used to detect how a file is exposed (e.g., Public on the internet, External, Internal, Private). Choosing Access level = External matches files that are shared with users outside your organization- exactly the "shared externally" condition.

Ref: Microsoft Defender for Cloud Apps - Create/Use file policies (File filters: Access level), Microsoft Learn.

See: Microsoft Defender for Cloud Apps > Policies > File policies documentation describing file filters including Access level and its values (Public, External, Internal, Private).

To target files that carry an MIP/AIP classification such as Internal Only, you use the Sensitivity label file filter. Defender for Cloud Apps ingests Microsoft Purview Information Protection labels and lets you build file policies that trigger when a specific label is applied.

Ref: Integrate Microsoft Information Protection with Microsoft Defender for Cloud Apps and File policies - Sensitivity label filter, Microsoft Learn.

These docs explain that MCAS can filter and govern files by Sensitivity label and apply governance based on labels such as Internal Only, Confidential, etc.

Why not the other options?

Collaborators filters by specific users/domains; it's useful to find files shared with a particular external user but not for the generic "shared externally" condition.

Matched policy is for files already flagged by another policy/DLP engine and does not detect "Internal Only" labeling by itself.

NEW QUESTION # 62

You have a Microsoft 365 E5 subscriptions.

You deploy Microsoft Purview Data Security Posture Management for AI (DSPM for AI).

You need to edit the default policies created as part of the deployment.

Which two Microsoft Purview solutions should you use? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Compliance Manager
- B. Data Lifecycle Management
- C. Data Loss Prevention
- D. DSPMforAI
- E. Information Protection
- F. Insider Risk Management
- G. Information Barriers

Answer: D,E

Explanation:

Step 1 - Understand the feature

The scenario is about Microsoft Purview Data Security Posture Management for AI (DSPM for AI), a capability in Microsoft Purview that helps:

- * Discover sensitive data across AI environments (including Copilot for Microsoft 365).
- * Assess data exposure risks.
- * Apply policies for data classification and protection.

When you deploy DSPM for AI, Microsoft Purview automatically creates default policies to classify and protect sensitive content. Step 2 - Which solutions are used to edit these policies?

* DSPM for AI (D) # This is the core solution where the default DSPM policies are deployed and visible. To edit or manage them, you must use the DSPM for AI blade in Microsoft Purview.

* Information Protection (B) # DSPM relies on Microsoft Information Protection (MIP), specifically sensitivity labels and sensitive information types. These labels and SITs are part of Purview Information Protection. Editing classification rules (e.g., sensitivity labels, sensitive info types, trainable classifiers) requires Information Protection.

Reference:

* Microsoft Purview Data Security Posture Management for AI (DSPM for AI)

* Overview of sensitivity labels in Microsoft Purview Information Protection Step 3 - Why not the others?

* A. Insider Risk Management # Detects risky insider activities (data theft, sabotage). Not used to configure DSPM policies.

* C. Compliance Manager # Provides compliance score and assessments, but does not configure DSPM policies.

* E. Information Barriers # Used to restrict communication between groups of users. Not related to DSPM.

* F. Data Lifecycle Management # Manages retention and deletion of data. Not related to DSPM for AI policy editing.

* G. Data Loss Prevention (DLP) # Protects sensitive data from being shared in apps/services, but DSPM's default policies are not edited here.

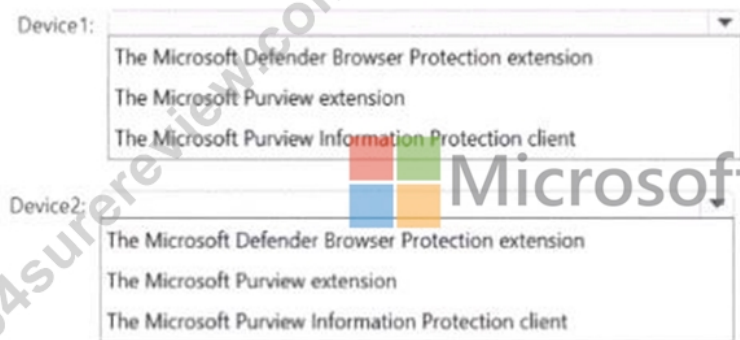

NEW QUESTION # 63

You have a Microsoft 365 ES subscription that contains two Windows devices named Device1 and Device2. Device1 has the default browser set to Microsoft Edge. Device2 has the default browser set to Google Chrome.

You need to ensure that Microsoft Purview insider risk management can collect signals when a user copies files to a USB device by using their default browser.

What should you deploy to each device? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

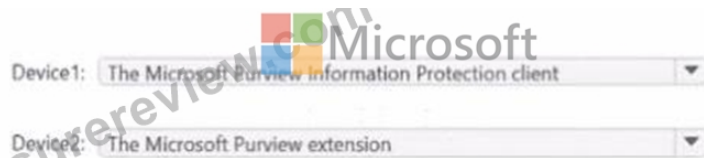

Answer:

Explanation:
Answer Area

Explanation:

Step 1 - Scenario

The requirement is to ensure Microsoft Purview Insider Risk Management can collect signals when a user copies files to a USB device using their default browser. The devices differ by browser type:

Device1 # Default browser = Microsoft Edge

Device2 # Default browser = Google Chrome

Step 2 - Signal collection methods in Insider Risk Management

Insider Risk Management uses Microsoft Purview Information Protection client and Purview browser extensions to collect activity signals.

For Microsoft Edge (Chromium-based), insider risk signals are collected via the Microsoft Purview Information Protection client.

For Google Chrome, signals are collected through the Microsoft Purview extension (available in the Chrome Web Store).

The Microsoft Defender Browser Protection extension is for web protection against malicious sites, not for insider risk activity signals, so it is irrelevant here.

Step 3 - Microsoft Reference

Microsoft documentation:

"For insider risk signals collection in Microsoft Edge, the Microsoft Purview client must be deployed. For Google Chrome, the Microsoft Purview extension is required." Reference: Insider risk management activity signals

NEW QUESTION # 64

.....

Just the same as the free demo, we have provided three kinds of versions of our Microsoft SC-401 preparation exam, among which the PDF version is the most popular one. It is understandable that many people give their priority to use paper-based SC-401 Materials rather than learning on computers, and it is quite clear that the PDF version is convenient for our customers to read and print the contents in our Administering Information Security in Microsoft 365 SC-401 study guide.
