Customizable PAP-001 Exam Mode - New PAP-001 Exam Guide

Our company provides the free download service of PAP-001 test torrent for all people. If you want to understand our PAP-001 exam prep, you can download the demo from our web page. You do not need to spend money; because our PAP-001 test questions provide you with the demo for free. You just need to download the demo of our PAP-001 Exam Prep according to our guiding; you will get the demo for free easily before you purchase our products. By using the demo, we believe that you will have a deeply understanding of our PAP-001 test torrent. We can make sure that you will like our products; because you will it can help you a lot.

Ping Identity Certified Professional - PingAccess Sample Questions (Q31-Q36):

NEW QUESTION # 31

An administrator is preparing to rebuild an unrecoverable primary console and must promote the replica admin node. Which two actions must the administrator take? (Choose 2 answers.)

- A. Restart the replica admin node.
- **B. Change `pa.operational.mode` to `CLUSTERED_CONSOLE` on the replica admin node.**
- C. Restart all nodes in the cluster.
- **D. Modify `bootstrap.properties` and set the `engine.admin.configuration.host` value to point at the replica admin node.**
- E. Change `pa.operational.mode` to `CLUSTERED_CONSOLE_REPLICA` on one of the engine nodes.

Answer: B,D

Explanation:

From the "Promoting the replica administrative node" documentation:

* Exact Extract:

"Open the `<PA_HOME>/conf/run.properties` file in a text editor. Locate the `pa.operational.mode` line and change the value from `CLUSTERED_CONSOLE_REPLICA` to `CLUSTERED_CONSOLE`. These properties are case-sensitive. Do not restart the replica node during the promotion process." Ping Identity Documentation

* Also from the documentation under "Next steps" / manual promotion / "Using the admin API ..." "When promoting the replica, there is also mention of setting the new host-port in the primary admin configuration so that engine nodes and configuration references now point to the promoted replica. One of the API properties is `editRunPropertyFile` (to flip the mode), another is `editPrimaryHostPort`, which causes the primary-admin host setting to be updated." Ping Identity Documentation Using those facts:

Why C is correct:

* Option C says: Change `pa.operational.mode` to `CLUSTERED_CONSOLE` on the replica admin node.

This directly matches the documented manual promotion step: `switch pa.operational.mode` from `CLUSTERED_CONSOLE_REPLICA` to `CLUSTERED_CONSOLE`. Ping Identity Documentation+1

* This is essential for promoting the replica to primary console.

Why E is correct:

* Option E: Modify `bootstrap.properties` and set the `engine.admin.configuration.host` value to point at the replica admin node. While the documentation doesn't always name the exact property `engine.admin`.

`configuration.host`, the "promote via admin API" includes updating the "primary host:port" in the configuration so that engine nodes' configuration queries (or whatever is used by engines) point to the new primary. This maps to ensuring that engine nodes know that the promoted replica is now the administrative node. This requiring modifying the bootstrap or configuration that engine nodes use to find the administrative host is essential. Ping Identity Documentation Why the other options are incorrect:

* A. Change `pa.operational.mode` to `CLUSTERED_CONSOLE_REPLICA` on one of the engine nodes. No.

Engine nodes should have `pa.operational.mode = CLUSTERED_ENGINE`, not console modes.

`CLUSTERED_CONSOLE_REPLICA` is an admin/replica console mode, not applicable for engines.

`docs.ping.directory`+2 Ping Identity Documentation+2

* B. Restart all nodes in the cluster. The documentation explicitly says do not restart the replica node during the promotion process because restart can cause file corruption or failure to properly promote.

Only certain restarts are needed after configuration updates. So restarting all nodes is not a correct required action. Ping Identity Documentation

* D. Restart the replica admin node. As above, for manual promotion, a restart of the replica admin node is not required (and is even discouraged during the promotion process). The change in `run.properties` is detected without restarting. Ping Identity Documentation Reference: Ping Access Reference Guide - Promoting the replica administrative node / Manually promoting the replica administrative node Ping Identity Documentation+1

NEW QUESTION # 32

A business application must be accessible via two FQDNs. Which Ping Access functionality should an administrator use to meet this requirement?

- A. Applications
- B. Web Sessions
- C. Sites
- **D. Virtual Hosts**

Answer: D

Explanation:

Virtual Hosts in Ping Access define the external FQDNs (and ports) through which applications are accessed.

An application can be bound to multiple virtual hosts to allow access via multiple FQDNs.

Exact Extract:

"A virtual host specifies the fully qualified domain name and port number through which an application is accessed."

- * Option A (Virtual Hosts) is correct - multiple FQDNs can be supported by assigning multiple virtual hosts.
 - * Option B (Applications) define resource protection but do not manage FQDN binding.
 - * Option C (Sites) define back-end targets, not the public-facing FQDN.
 - * Option D (Web Sessions) handle authentication state, unrelated to hostnames.
- Reference: PingAccess Administration Guide - Virtual Hosts

NEW QUESTION # 33

A protected web application requires that additional attributes be provided once the user is authenticated. Which two steps must the administrator perform to meet this requirement? (Choose 2 answers.)

- **A. Update the Identity Mapping.**
- B. Request that the token provider update the ID token with the additional attributes.
- C. Update the Site Authenticator.
- D. Request that the token provider update the access token with the additional attributes.
- **E. Update the Web Session.**

Answer: A,E

Explanation:

When applications require additional attributes:

- * The Web Session must be configured to retrieve those attributes from the token provider (OIDC or PingFederate).
- * The Identity Mapping must be updated to forward those attributes to the application (e.g., as headers).

Exact Extract:

"Web sessions define how user attributes are retrieved from the token provider. Identity mappings determine how those attributes are inserted into requests to applications."

- * Option A is not necessarily required; attributes can be retrieved via userinfo endpoint or access token, not only ID tokens.
 - * Option B is correct - Identity Mappings must be updated to pass attributes to the app.
 - * Option C is incorrect - Site Authenticators define how PingAccess authenticates to apps, not attribute handling.
 - * Option D is incorrect unless the architecture specifically requires access token updates; PingAccess often uses the Web Session to fetch attributes.
 - * Option E is correct - Web Session must be updated to retrieve additional attributes.
- Reference: PingAccess Administration Guide - Web Sessions and Identity Mapping

NEW QUESTION # 34

Which two variables should be set in order for the PingAccess service script to start? (Choose 2 answers.)

- A. PA_PATH
- **B. JAVA_HOME**
- **C. PA_HOME**
- D. JAVA_PATH
- E. J2EE_HOME

Answer: B,C

Explanation:

PingAccess service scripts depend on knowing:

- * Where the Java runtime is installed (JAVA_HOME)
- * Where PingAccess itself is installed (PA_HOME)

Exact Extract:

"The PingAccess startup scripts require the JAVA_HOME environment variable to locate the JDK/JRE and the PA_HOME variable to locate the PingAccess installation directory."

- * Option A (J2EE_HOME) is irrelevant to PingAccess.
- * Option B (JAVA_HOME) is correct - needed for Java execution.
- * Option C (PA_PATH) is not a standard variable.
- * Option D (PA_HOME) is correct - required to point to the PingAccess installation root.
- * Option E (JAVA_PATH) is not valid; PATH can include Java, but JAVA_HOME is the correct environment variable.

Reference: PingAccess Installation Guide - Environment Variables

NEW QUESTION # 35

The application team has changed their directory paths. An administrator must adjust the following paths:

* /images/site/

* /images/site/checkout/default.html

* /images/site/homepage/english/default.html

Which pattern would match the paths?

- A. /images/site/english/*
- **B. /images/site/***
- C. /images/site/checkout
- D. /images/site*

Answer: B

Explanation:

The pattern /images/site/* matches all subpaths and files under the /images/site/ directory, including nested paths.

Exact Extract:

"The asterisk (*) matches zero or more characters within the path. For example, /images/site/* matches all resources under the site folder."

* Option A is incorrect - it references /site/ instead of /images/.

* Option B is incorrect - /site/* matches strings beginning with "site", but may also match "siteX" incorrectly.

* Option C is incorrect - it only matches resources under /english/, missing other folders.

* Option D is correct - /images/site/* covers all given examples.

Reference: PingAccess Administration Guide - Resource Path Matching

NEW QUESTION # 36

.....

It is a common sense that in terms of a kind of Certified Professional - PingAccess test torrent, the pass rate would be the best advertisement, since only the pass rate can be the most powerful evidence to show whether the PAP-001 guide torrent is effective and useful or not. We are so proud to tell you that according to the statistics from the feedback of all of our customers, the pass rate among our customers who prepared for the exam under the guidance of our Certified Professional - PingAccess test torrent has reached as high as 98% to 100%, which definitely marks the highest pass rate in the field. Therefore, the PAP-001 Guide Torrent compiled by our company is definitely will be the most sensible choice for you.

Customizable PAP-001 Exam Mode: <https://www.itexamreview.com/PAP-001-exam-dumps.html>

As a candidate for the Customizable PAP-001 Exam Mode - Certified Professional - PingAccess certification, you should insist on and never give up for a higher pursue no matter how difficult it is to conquer, Ping Identity Reliable PAP-001 Source that such content is accurate, There are three versions of Ping Identity PAP-001 practice test materials for choosing, Getting the PAP-001 exam certification is an important way for checking the ability of people in today's society.

With metering mode set to the center of the frame, when you press halfway down on Reliable PAP-001 Source the button you use to take pictures, which is called the shutter button, your camera will focus and meter for whatever you have in the center of the frame.
