HCL-DOM-AADM-12 Reliable Test Simulator - Reliable HCL-DOM-AADM-12 Study Guide

Our HCL-DOM-AADM-12 quiz torrent can provide you with a free trial version, thus helping you have a deeper understanding about our HCL-DOM-AADM-12 test prep and estimating whether this kind of study material is suitable to you or not before purchasing. With the help of our trial version, you will have a closer understanding about our HCL-DOM-AADM-12 exam torrent from different aspects, ranging from choice of three different versions available on our test platform to our after-sales service. Otherwise you may still be skeptical and unintelligible about our HCL-DOM-AADM-12 Test Prep. So as you see, we are the

corporation with ethical code and willing to build mutual trust between our customers.

HCL Software Academy HCLSoftware Certified Associate Administrator Exam - Notes/Domino 12 Sample Questions (Q28-Q33):

NEW QUESTION # 28

The AdminP task processes its queue from the ____ database.

- A. names.nsf
- B. mail.box
- C. certlog.nsf
- **D. admin4.nsf**

Answer: D

Explanation:

The Administration Process (AdminP) is an automated system for updating the Domino Directory and managing various server and database tasks throughout a domain. All administrative requests-such as user renames, deletions, or moves-are submitted as "request notes" to the Administration Requests database (admin4.nsf) . The AdminP task on each server monitors this database, identifies tasks it needs to perform, and records the results of those actions back into the same database for the administrator to review.

NEW QUESTION # 29

Which database is used by Domino to store DDM event data?

- A. names.nsf
- B. admin4.nsf
- **C. ddm.nsf**
- D. events4.nsf

Answer: C

Explanation:

Domino Domain Monitoring (DDM) is a feature that centralizes the monitoring of multiple servers within a domain. All event data generated by DDM-such as probes that check server health or security-is stored in the ddm.nsf (Domino Domain Monitoring) database. Administrators use this database to view reports, track trends, and identify specific issues that require attention across their entire server infrastructure.

NEW QUESTION # 30

Which two security options can be enforced via a Desktop Policy for Notes client users? (Choose two)

- **A. Force Smart Upgrade client installation**
- **B. Enforce ID file locking on client inactivity**
- C. Mail encryption routing path
- D. Disabling full-text indexing

Answer: A,B

Explanation:

Desktop Policies are used by administrators to standardize the Notes client environment and enforce security behavior. Two key security-related settings managed through these policies include enforcing ID file locking , which automatically locks the user's ID after a specific period of inactivity to prevent unauthorized access on a shared workstation. Additionally, policies can force Smart Upgrade , ensuring that all users are running the approved, secure version of the Notes client software by automating the installation of updates.

NEW QUESTION # 31

Which Domino document is used to define the mail routing topology between servers?

- **A. Connection document**
- B. Domain Configuration document
- C. Server document
- D. Person document

Answer: A

Explanation:

A Connection document is the primary tool used in the Domino Directory to define mail routing topology and replication schedules between servers. It specifies the source and destination servers, the connection type (e.g., Local Network), and the specific times when the Router should push mail or when databases should replicate between the two systems.

NEW QUESTION # 32

What is the role of the Domino Domain Monitoring (DDM) feature?

- A. To encrypt all SMTP mail messages
- **B. To centralize event collection and monitoring across servers**
- C. To replicate directory entries across domains

Answer: B

Explanation:

Domino Domain Monitoring (DDM) is designed to give administrators a high-level view of the health of their entire infrastructure. Its primary role is to centralize event collection and monitoring across servers within a domain. By using specialized probes, DDM gathers status information from various servers and aggregates the data into a single database (ddm.nsf), allowing administrators to identify and resolve issues from one central location.

Here is the next batch of questions (51-60) from your provided list, strictly following the requested formatting and verified for the HCL-DOM-AADM-12 exam.

NEW QUESTION # 33

.....

There are other several HCL Software Academy HCL-DOM-AADM-12 certification exam benefits that you can gain after passing the HCL Software Academy HCL-DOM-AADM-12 certification exam. However, you should keep in mind that passing the HCLSoftware Certified Associate Administrator Exam - Notes/Domino 12 certification exam is not a simple and easiest task. It is a challenging job that you can make simple and successful with the complete HCL-DOM-AADM-12 Exam Preparation.
