JN0-253 Exam Simulator Fee, JN0-253 Certification Test Questions

The JN0-253 study materials of our company is the study tool which best suits these people who long to pass the exam and get the related certification. So we want to tell you that it is high time for you to buy and use our JN0-253 Study Materials carefully. Now we are glad to introduce the study materials from our company to you in detail in order to let you understanding our study products.

Juniper JN0-253 Exam Syllabus Topics:

Topic	Details
Topic 1	• Location-based Services: This domain presents virtual Bluetooth Low Energy capabilities for asset tracking, visibility, and location-aware experiences that extend networking into physical space management.
Topic 2	• Juniper Mist Cloud Fundamentals: This domain covers Juniper's cloud-native platform architecture, focusing on AI and machine learning capabilities for intelligent network management and real-world deployment scenarios.
Topic 3	• Juniper Mist Configuration Basics: This domain addresses initial setup including user accounts, device onboarding, organizational structures, subscription licensing, certificate management, and automated provisioning with labels and policies.
Topic 4	• Marvis Virtual Network Assistant AI: This domain introduces Marvis, an AI-powered assistant providing automated troubleshooting through intelligent actions, natural language queries, and specialized analytical tools for proactive issue resolution.

Juniper Mist AI, Associate (JNCIA-MistAI) Sample Questions (Q96-Q101):

NEW QUESTION # 96
Which parameter is beyond the scope of the Connectivity category when troubleshooting with Marvis Actions?

- A. DHCP failure
- B. duplex mismatch
- C. DNS failure
- D. authentication failure

Answer: B

Explanation:
The duplex mismatch parameter is beyond the scope of Marvis Actions' Connectivity category. According to the official Juniper Mist documentation, Marvis Actions within the Connectivity category are designed to troubleshoot common network connectivity issues for wireless clients, including DHCP failure, DNS failure, authentication failure, and ARP failure. These actions automatically detect and provide detailed insights about failures most likely to impact client onboarding, IP addressing, and network services. Duplex mismatch, on the other hand, is a wired networking issue where there is a disagreement between network devices (such as switches and end hosts) regarding duplex settings (half-duplex or full-duplex), and it typically causes performance problems like collisions and slow speeds. Marvis's focus for the Connectivity troubleshooting category is wireless protocol-level connectivity and service reachability, so duplex mismatch falls outside its direct scope of detection and automatic remediation.

NEW QUESTION # 97
What is the purpose of Audit Logs in Juniper Mist?

- A. to record key performance events
- B. to record security alerts
- C. to record SLE violations
- D. to record administrative activities

Answer: D

Explanation:
The purpose of Audit Logs in Juniper Mist is to record administrative activities within the Mist dashboard.
According to the official Juniper Mist documentation: "Audit Logs provide a detailed chronological record of each configuration change, administrative action, and user activity within the Mist Cloud portal. These logs include information such as the action performed (e.g., adding or removing sites, devices, or users), the timestamp, and the user who performed the action. Audit Logs are critical for accountability, compliance, and troubleshooting, enabling administrators to trace changes and ensure that only authorized users are making modifications to their network settings. Mist stores audit log records securely and makes them accessible for review by organization administrators from the dashboard's Organization > Audit Logs section." This directly aligns with option C, as the logs primarily track configuration changes and administrative actions-not performance events, security alerts, or SLE violations. Such activities include site creation, modification, device assignment, role changes, and other user or configuration updates.

NEW QUESTION # 98
In the Latest Updates section of Marvis Actions, an issue might be classified as one of which three states? (Choose three.)

- A. Resolved
- B. AI Validated
- C. Intermittent Issue
- D. Reoccurring Issue
- E. Active

Answer: A,B,D

NEW QUESTION # 99

Which statement is correct about the relationship between Juniper Mist organizations and sites?

- **A. One Juniper Mist organization can contain multiple sites.**
- B. One Juniper Mist site can contain multiple organizations.
- C. You must have one Juniper Mist superuser login for each site.
- D. A Juniper Mist superuser login grants access to all organizations.

Answer: A

Explanation:
According to the official Juniper Mist documentation on the configuration hierarchy, the platform uses a three- tier model:
Organization # Site # Device. At the organization level, you manage administrator accounts, subscriptions, and organization-wide settings. Then:
"An organization can include one or more sites. A site can represent a physical location or a logical subdivision of your enterprise or campus." Also, in the simpler case explanation:
"Each customer is created as a separate organization. Within that organization multiple sites can be created." Mist These statements make clear that the correct relationship is: one organization may have multiple sites under it.
The inverse - that a site might contain multiple organizations - is not supported in the documented hierarchy. Therefore option B is correct.

NEW QUESTION # 100

Which three components are used to deploy location-based services? (Choose three.)

- **A. BLE tags**
- **B. location sensors**
- **C. location engine**
- D. compact flash
- E. SFP

Answer: A,B,C

Explanation:
To deploy location-based services in Mist, the following components are used:
Location Sensors: These devices capture the location data from BLE tags and other devices.
BLE Tags: These are small devices that emit Bluetooth signals to be picked up by location sensors.
Location Engine: This software processes the data from the sensors and tags to determine precise locations and provide analytics.

NEW QUESTION # 101

......

The test software used in our products is a perfect match for Windows' JN0-253 learning material, which enables you to enjoy the best learning style on your computer. Our JN0-253 certification guide also use the latest science and technology to meet the new requirements of authoritative research material network learning. Unlike the traditional way of learning, the great benefit of our JN0-253 learning material is that when the user finishes the exercise, he can get feedback in the fastest time. So, users can flexibly adjust their learning plans according to their learning schedule. We hope that our new design of JNCIA-MistAI test questions will make the user's learning more interesting and colorful.
