## Cisco Implementing Cisco Enterprise Advanced Routing and Services Sample Questions (Q480-Q485):

### NEW QUESTION # 480

Refer to the exhibit A network engineer received a call from the vendor for a failed attempt to remotely log in to their managed router loopback interface from 192.168.40.15 Which action must the network engineer take to resolve the issue?

- A. The EIGRP configuration must be updated to include a network statement for loopback 100
- B. The IP access list VENDOR must be applied to interface loopback 100
- C. The time-range configuration must be changed to use absolute instead of periodic
- D. The source IP summarization must be updated to include the vendor source IP address

Answer: A

### NEW QUESTION # 481

Refer to the exhibit. An engineer configured router R3 to redistribute the prefix 10.10.10.0/24 from OSPF into EIGRP. R1 has no connectivity to the prefix. Which action enables receipt of prefixes on R1?

- A. R1 is not receiving the next-hop IP address of R3. R2 must enable the network 10.20.20.0/24 within EIGRP.
- **B. R1 does not have a neighbor relationship with R2. The EIGRP process should be cleared on R1.**
- C. Duplicate router IDs on R1 and R3, R1 should modify its router ID.
- D. R3 is advertising the 10.20.20.0/24 prefix with a TTL of 1, R3 must set the TTL to 2 for this prefix.

**Answer: B**

### NEW QUESTION # 482

A network administrator is trying to access a branch router using TACACS+ username and password credentials, but the administrator cannot log in to the router because the WAN connectivity is down. The branch router has following AAA configuration:

Which command will resolve this problem when WAN connectivity is down?

- A. aaa authentication login console group tacacs+ enable
- B. aaa authentication login default group tacacs+ console
- **C. aaa authentication login default group tacacs+ local**
- D. aaa authentication login default group tacacs+ enable

**Answer: C**

Explanation:

With the "aaa authentication login default group tacacs+ local" command configured, when logging in, the password supplied will be attempted to be verified by the TACACS+ server before access is granted. If the server is unavailable/unreachable, then the switch will fall back to using the local authentication database.

### NEW QUESTION # 483

Drag and drop the MPLS terms from the left onto the correct definitions on the right.

**Answer:**

Explanation:

Explanation:

### NEW QUESTION # 484

Refer to the exhibit.

Refer to the exhibit. A customer finds that traffic from the application server (192.168.1.1) to the HUB site passes through a congested path that causes random packet drops. The NOC team influences the BGP path with MED on RB, but RD still sees that traffic coming from RA is not taking an alternate route. Which configuration resolves the issue?

- A.
- B.
- C.
- **D.**

**Answer: D**

### NEW QUESTION # 485

.....
