We have the confidence and ability to make you finally have rich rewards. Our 350-801 Learning Materials provide you with a platform of knowledge to help you achieve your wishes.

Cisco 350-801 Exam consists of multiple-choice questions, simulations, and drag-and-drop questions. 350-801 exam is timed and

candidates must complete the exam within the allotted time. 350-801 exam is administered by Pearson VUE, a leading provider of computer-based testing services. Candidates who pass the exam will receive the Cisco Certified Network Professional Collaboration certification.

Cisco Implementing and Operating Cisco Collaboration Core Technologies Sample Questions (Q59-Q64):

NEW QUESTION # 59
In a company meeting employees join virtually and listen. However, the SpeakerTrack device that is connected to a collaboration endpoint that follows the speaker suddenly stops working. What is the cause of this issue?

- A. The SpeakerTrack device is in standby mode
- B. The SpeakerTrack is running a firmware version that is not compatible with the codec
- C. The left camera or right camera is disconnected
- D. The microphone panel is obstructed to detect the voice of the speaker

Answer: B

NEW QUESTION # 60
Multiple route patterns match a number. How does Cisco Unified Communications Manager determine which pattern to use?

- A. the one that discards everything PreDot
- B. the one with the longest match
- C. the one that comes first in numerical order
- D. the one with the closed match

Answer: D

NEW QUESTION # 61
What is the major difference between the two possible Cisco IM and Presence high-availability modes?

- A. Balanced mode provides user load balancing and user failover only for manually generated failovers.
  Active/standby mode provides an unconfigured standby node in the event of an outage, but it does not provide load balancing.
- B. Balanced mode does not provide user load balancing, but it provides user failover in the event of an outage.
  Active/standby mode provides an always on standby node in the event of an outage, but it does not provide load balancing.
- C. Balanced mode provides user load balancing and user failover in the event of an outage. Active/standby mode provides an always on standby node in the event of an outage, and it also provides load balancing.
- D. Balanced mode provides user load balancing and user failover in the event of an outage. Active/standby mode provides an always on standby node in the event of an outage, but it does not provide load balancing.

Answer: D

Explanation:
Balanced mode provides user load balancing and user failover in the event of an outage. Active/standby mode provides an always on standby node in the event of an outage, but it does not provide load balancing.
Here is a more detailed explanation of the two modes:
* Balanced mode: In balanced mode, the IM and Presence Service nodes are configured to work together to provide high availability. The nodes are configured in a redundancy group, and the system automatically balances the load of users across the nodes in the group. If one of the nodes fails, the system automatically fails over the users to the other nodes in the group.
* Active/standby mode: In active/standby mode, one of the IM and Presence Service nodes is designated as the active node, and the other nodes are designated as standby nodes. The active node handles all of the user traffic, and the standby nodes are only used if the active node fails. If the active node fails, the system automatically fails over to one of the standby nodes.

NEW QUESTION # 62
Refer to the exhibit.

Refer to the exhibit. This INVITE is sent to an endpoint that only supports G.729. What must be done for this call to succeed?

- A. Nothing both sides support payload type 101.
- B. Nothing; both sides support G.729.
- C. Add a transcoder that supports G.711ulaw and G.729.
- D. Add a media termination point that supports G.711ulaw and G.729.

Answer: C

NEW QUESTION # 63

Where is urgent priority enabled to bypass the T302 timer?

- A. directory number
- B. CTl port
- C. transformation pattern
- D. route partition

Answer: D

Explanation:
Urgent priority is enabled on the directory number configuration page. This allows the call to be routed at once to the fully qualified DN without any necessity to wait for inter-digit-timeout. If the Urgent Priority checkbox is disabled and you have overlap patterns configured, then CUCM waits for the user to dial further digits.
The other options are incorrect because:
* Route partitions are used to group route patterns and route lists.
* Transformation patterns are used to convert dialed digits into a different format.
* CTI ports are used to connect Cisco Unified Communications Manager to third-party applications.
