

# Pass Guaranteed Quiz 2026 Fantastic H19-308\_V4.0: Valid HCSA-Presales-Storage V4.0 Test Cost

H19-308\_V4.0 is the authentic study guides with the latest exam material which can help you solve all the difficulties in the actual test. Our H19-308\_V4.0 free demo is available for all of you. You will receive an email attached with the H19-308\_V4.0 training dumps within 5-10 minutes after completing purchase. Immediately download for the H19-308\_V4.0 study pdf is available for study with no time wasted. We have money refund policy to ensure your interest in case the failure of H19-308\_V4.0 actual test.

Candidates who become Huawei H19-308\_V4.0 certified demonstrate their worth in the Huawei field. H19-308\_V4.0 certification is proof of their competence and skills. This is a highly sought after credential and it makes career advancement easier for the candidate. To become Huawei H19-308\_V4.0 Certified, you must pass the HCSA-Presales-Storage V4.0 (H19-308\_V4.0) Exam. For this task, you need actual and updated H19-308\_V4.0 Questions.

## H19-308\_V4.0 Updated Test Cram - H19-308\_V4.0 New Dumps Sheet

People need to increase their level by getting the Huawei H19-308\_V4.0 certification. If you take an example of the present scenario in this competitive world, you will find people struggling to meet their ends just because they are surviving on low-scale salaries. Even if they are thinking about changing their jobs, people who are ready with a better skill set or have prepared themselves with Huawei H19-308\_V4.0 Certification grab the chance. This leaves them in the same place where they were.

## Huawei HCSA-Presales-Storage V4.0 Sample Questions (Q261-Q266):

#### NEW QUESTION # 261

Statement 1: RAID 2.0+ is NOT based on traditional RAID technologies.

Statement 2: RAID 2.0+ has excellent rebuild characteristics.

- A. Statement 1 is true and statement 2 is false.
- **B. Statement 1 is false and statement 2 is true.**
- C. Both statements 1 and 2 are false.
- D. Statements 1 and 2 are both true.

**Answer: B**

#### NEW QUESTION # 262

Which statements are incorrect about remote replication and HyperMetro features of storage systems? (Select all that apply)

- A. Asynchronous remote replication has no limit on the distance.
- **B. Both LUNs in a remote replication pair can provide services for servers.**
- C. Synchronous remote replication and HyperMetro technologies require that the distance does not exceed 300 km.
- **D. HyperMetro and synchronous remote replication technologies can implement automatic switchover upon a storage system fault.**

**Answer: B,D**

Explanation:

According to Huawei's BCManager and HyperReplication guides, "incorrect" statements must be identified to understand the distinction between disaster recovery (DR) and active-active solutions. Option B is incorrect because while HyperMetro supports automatic transparent failover (zero RTO) using a Quorum Server, standard synchronous remote replication typically requires manual intervention or third-party management software to trigger a switchover when the primary site fails. In synchronous replication, the secondary LUN is usually in a read-only state and cannot take over automatically without administrative action. Option D is incorrect because it describes an "Active-Active" state. In a standard Remote Replication pair, only the primary LUN is accessible for host I/O (Read/Write), while the secondary LUN is locked to maintain data consistency. Only the HyperMetro feature allows both LUNs in the pair to provide simultaneous read and write services to application servers across different sites. Regarding distance, while asynchronous replication is physically less constrained, synchronous and HyperMetro technologies are strictly limited by latency (typically requiring round-trip time <10ms and distance within 100km to 300km depending on the specific product line) to avoid severe application performance degradation.

#### NEW QUESTION # 263

OceanStor Dorado NAS delivers high performance. Which of the following scenarios does OceanStor Dorado NAS apply to? (Choose all that apply.)

- A. Metropolitan area network (MAN) centralized video security
- **B. Financial data exchange platforms**
- C. Carrier CDRs
- **D. EDA simulation**

**Answer: B,D**

Explanation:

OceanStor Dorado NAS primarily targets high-performance scenarios but is best suited for EDA simulation and financial data exchange platforms. While it can support video security and Carrier CDRs, these are not its primary focus areas, as they typically require different storage optimizations.

OceanStor Dorado NAS excels in high-performance, low-latency applications such as EDA simulations and financial data exchange platforms. Although it may support video security and CDRs, these applications often rely more on dedicated or specialized storage solutions optimized for streaming and sequential data access.

#### NEW QUESTION # 264

Which of the following is the maximum performance (IOPS@SPC-1) that OceanStor V5 can achieve?

- A. 4 Million IOPS@1ms

- B. 3 Million IOPS@lms
- C. 6 Million IOPS@lms

**Answer: C**

#### NEW QUESTION # 265

A snapshot is a full copy of a LUN in SAN storage.

- A. TRUE
- B. FALSE

**Answer: B**

Explanation:

In Huawei OceanStor systems, a snapshot is not a full physical copy of the data. Huawei uses a technology called HyperSnap, which typically employs a "Copy-on-Write" (COW) or "Redirect-on-Write" (ROW) mechanism.

When a snapshot is created, the system generates a point-in-time (PIT) logical image of the source LUN. It does not immediately duplicate the data blocks; instead, it records the state of the data at that specific moment. If data in the source LUN is subsequently modified, the original data is preserved (in COW) or new data is written to a new location (in ROW) to maintain the integrity of the snapshot. Because only the metadata and the changed blocks are managed, snapshots are created near-instantaneously and consume very little initial space.

A "full copy" would be referred to as a Clone (HyperClone) or a LUN Copy, both of which require a 1:1 ratio of physical storage space relative to the source and take significant time to complete. Therefore, a snapshot is a virtual, point-in-time image, not a full physical duplicate.

#### NEW QUESTION # 266

.....

The pass rate is 98% for H19-308\_V4.0 exam bootcamp, and if you choose us, we can ensure you that you can pass the exam and obtain the certification successfully. In addition, H19-308\_V4.0 exam materials are edited by professional experts, therefore they are high-quality, and you can improve your efficiency by using H19-308\_V4.0 Exam braindumps of us. We offer you free demo to have a try before buying H19-308\_V4.0 training materials, so that you can know what the complete version is like. We have online and offline chat service for H19-308\_V4.0 training materials, and if you have any questions, you can consult us.
