## ISC CISSP Reliable Test Tutorial, CISSP Exam Registration

The Certified Information Systems Security Professional (CISSP) (CISSP) practice questions (desktop and web-based) are customizable, meaning users can set the questions and time according to their needs to improve their discipline and feel the real-based exam scenario to pass the ISC CISSP Certification. Customizable mock tests comprehensively and accurately represent the actual Certified Information Systems Security Professional (CISSP) (CISSP) certification exam scenario.

## ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q1236-Q1241):

### NEW QUESTION # 1236

As one component of a physical security system, an Electronic Access Control (EAC) token is BEST known for its ability to

- A. overcome the problems of key assignments.
- B. trigger alarms when intruders are detected.
- C. lock down a facility during an emergency.
- D. monitor the opening of windows and doors.

**Answer: A**

**Explanation:**

An Electronic Access Control (EAC) token is best known for its ability to overcome the problems of key assignments in a physical

security system. An EAC token is a device that can be used to authenticate a user or grant access to a physical area or resource, such as a door, a gate, or a locker<sup>2</sup>. An EAC token can be a smart card, a magnetic stripe card, a proximity card, a key fob, or a biometric device. An EAC token can overcome the problems of key assignments, which are the issues or challenges of managing and distributing physical keys to authorized users, such as lost, stolen, duplicated, or unreturned keys. An EAC token can provide more security, convenience, and flexibility than a physical key, as it can be easily activated, deactivated, or replaced, and it can also store additional information or perform other functions. Monitoring the opening of windows and doors, triggering alarms when intruders are detected, and locking down a facility during an emergency are not the abilities that an EAC token is best known for, as they are more related to the functions of other components of a physical security system, such as sensors, alarms, or locks.

#### NEW QUESTION # 1237

##### DRAG DROP

A software security engineer is developing a black box-based test plan that will measure the system's reaction to incorrect or illegal inputs or unexpected operational errors and situations. Match the functional testing techniques on the left with the correct input parameters on the right.

**Answer:**

Explanation:

#### NEW QUESTION # 1238

A "critical application" is one that MUST

- A. Be constantly monitored by operations management.
- B. Undergo continual risk assessments.
- C. Be subject to continual program maintenance.
- **D. Remain operational for the organization to survive.**

**Answer: D**

Explanation:

I am assuming that I don't need to put a reference for this answer. Yeah ok here it is but I cheated and used a earlier reference "A BIA is performed at the beginning of disaster recovery and continuity planning to identify the areas that would suffer the greatest financial or operational loss in the event of a disaster or disruption. It identifies the company's critical systems needed for survival and estimates the outage time that can be tolerated by the company as a result of disaster or disruption." - Shon Harris All-in-one CISSP Certification Guide pg 597

#### NEW QUESTION # 1239

The threat modeling identifies a man-in-the-middle (MITM) exposure. Which countermeasure should the information system security officer (ISSO) select to mitigate the risk of a protected Health information (PHI) data leak?

- A. Privacy monitoring
- **B. Anonymization**
- C. Data retention
- D. Auditing

**Answer: B**

Explanation:

The countermeasure that the information system security officer (ISSO) should select to mitigate the risk of a protected health information (PHI) data leak due to a man-in-the-middle (MITM) exposure is anonymization.

A MITM exposure is a type of network attack where an attacker intercepts, modifies, or relays the communication between two parties, such as a client and a server, without their knowledge or consent. A MITM exposure can compromise the confidentiality, integrity, and availability of the data and the network, and can lead to data theft, fraud, or sabotage. A PHI data leak is a type of data breach where the sensitive and personal information of patients or health care providers, such as medical records, diagnoses, treatments, or insurance details, are exposed or disclosed to unauthorized parties, such as hackers, competitors, or media. A PHI data leak can violate the privacy and security of the data and the individuals, and can result in legal or regulatory penalties,

reputational damage, or financial losses. Anonymization is a technique that removes or masks the identifying or personal information from the data, such as names, addresses, or social security numbers, and replaces them with pseudonyms, codes, or random values. Anonymization can prevent or reduce the risk of a PHI data leak due to a MITM exposure, as it makes the data untraceable and unlinkable to the individuals, and protects the data from being accessed or misused by unauthorized parties. Auditing, privacy monitoring, and data retention are not countermeasures that the ISSO should select to mitigate the risk of a PHI data leak due to a MITM exposure, as they are either not effective or not relevant for preventing or reducing the data exposure or disclosure, or they may have other purposes or functions than data protection.

### NEW QUESTION # 1240

During the risk assessment phase of the project the CISO discovered that a college within the University is collecting Protected Health Information (PHI) data via an application that was developed in-house. The college collecting this data is fully aware of the regulations for Health Insurance Portability and Accountability Act (HIPAA) and is fully compliant.

What is the best approach for the CISO?

Below are the common phases to creating a Business Continuity/Disaster Recovery (BC/DR) plan. Drag the remaining BC/DR phases to the appropriate corresponding location.

**Answer:**
