

Pdf H12-891_V1.0 Torrent | H12-891_V1.0 Exam Sample Questions

P.S. Free 2026 Huawei H12-891_V1.0 dumps are available on Google Drive shared by DumpsTorrent:
https://drive.google.com/open?id=1FFFCUObylN9ZnqgcJFlqbe4JK9V8zB6_0

As long as you study with our H12-891_V1.0 training braindumps, you will find that our H12-891_V1.0 learning quiz is not famous for nothing but for its unique advantages. The H12-891_V1.0 exam questions and answers are rich with information and are easy to remember due to their simple English and real exam simulations and graphs. So many customers praised that our H12-891_V1.0 preparation guide is well-written. With our H12-891_V1.0 learning engine, you are success guaranteed!

Huawei H12-891_V1.0 (HCIE-Datacom V1.0) certification exam is designed to validate the skills and knowledge of IT professionals who are responsible for designing, deploying, and managing large-scale data communication networks. HCIE-Datacom V1.0 certification is an advanced-level certification that is intended for experienced network professionals who want to enhance their knowledge and skills in data communication technologies.

The H12-891_V1.0 Exam covers a wide range of topics, including network design, routing protocols, network security, network management, and more. H12-891_V1.0 Exam consists of both theoretical and practical components, requiring candidates to demonstrate their understanding of key concepts and their ability to apply them in real-world scenarios. Successful candidates receive the HCIE-Datacom V1.0 certification, which is recognized worldwide as a mark of excellence in the field of data communication.

Valid Pdf H12-891_V1.0 Torrent - Authoritative H12-891_V1.0 Exam Tool Guarantee Purchasing Safety

Elaborately designed and developed H12-891_V1.0 test guide as well as good learning support services are the key to assisting our customers to realize their dreams. Our H12-891_V1.0 study braindumps have a variety of self-learning and self-assessment functions to detect learners' study outcomes, and the statistical reporting function of our H12-891_V1.0 Test Guide is designed for students to figure out their weaknesses and tackle the causes, thus seeking out specific methods dealing with them. Our H12-891_V1.0 exam guide have also set a series of explanation about the complicated parts certificated.

The H12-891_V1.0 exam covers a wide range of topics, including network architecture, network protocols, network security, quality of service, and network troubleshooting. Candidates are expected to have a deep understanding of these topics and be able to apply their knowledge to real-world scenarios. H12-891_V1.0 Exam consists of both theoretical and practical components, ensuring that candidates have a well-rounded understanding of data communication.

Huawei HCIE-Datacom V1.0 Sample Questions (Q95-Q100):

NEW QUESTION # 95

The following about BGP routing, describing the error, is ?

- A. For next_hop unreachable routes when invalid routes, do not participate in the preferred.
- B. See the following entry in the BGP routing table: * 172.161.11/32 000010 0? Indicates that the route is available non-optimal
- C. non-aggregate routes take precedence over aggregate routes
- D. In PrefVal, Local_Preference is equal to the case if the route is generated locally, I BGP Routing, the BGP preference for E BGP routing, is generated effectively referring to route priority.

Answer: C

NEW QUESTION # 96

On a VXLAN-based virtualized network, if the fabric networking mode is centralized gateway networking, the gateway is located on the _____ device. (Capitalize the first letter.)

Answer:

Explanation:

SpineIn VXLAN centralized gateway networking, the default gateway (for both intra- and inter-subnet traffic) is placed on the Spine node, which acts as a centralized gateway device. This architecture simplifies routing and enables centralized control for inter-VNI routing. It is often contrasted with distributed gateway mode, where gateways reside on leaf nodes. Huawei Datacom Reference: "In centralized gateway mode, the spine node functions as the gateway and processes both inter-VNI routing and gateway services." (Source: HCIE- Datacom V1.0 Official Training - VXLAN & Fabric Networking Chapter, Section: VXLAN Gateway Deployment Modes)

NEW QUESTION # 97

Which of the following statements about prefix segments and adjacency segments are correct?

- A. A prefix SID is a local SID out of the SRGB range.
- B. An adjacency SID is an offset value within the SRGB range advertised by the source end.
- C. An adjacency segment identifies an adjacency on a network.
- D. A prefix segment identifies the prefix of a destination address on a network.

Answer: C,D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

Prefix Segment:

Represents a destination prefix in the network.

A Prefix SID (Segment Identifier) is a globally unique SID that maps to an IP prefix and is within the SRGB (Segment Routing Global Block) range.

Therefore, C is correct.

A is incorrect because a prefix SID is within the SRGB range, not out of it.

Adjacency Segment:

Represents a link (adjacency) between two nodes.

An Adjacency SID is locally significant and typically allocated from the SRLB (Segment Routing Local Block) range.

It uniquely identifies a link between nodes in the source node's local routing table.

Therefore, D is correct, while B is incorrect because an adjacency SID is not necessarily an offset within the SRGB.

NEW QUESTION # 98

Which of the following statements is incorrect about access control on small and midsize campus networks based on the Huawei CloudCampus solution?

- A. Cloud APs support local Portal authentication.
- B. iMaster NCE can function as an authentication server.

- C. iMaster NCE can function as a Portal relay device.
- D. iMaster NCE can interconnect with a third-party RADIUS server.

Answer: A

Explanation:

Understanding Huawei CloudCampus Access Control

Huawei's CloudCampus solution provides centralized authentication and policy management via iMaster NCE-Campus.

Analysis of Each Option:

A. iMaster NCE can function as an authentication server.

Correct: iMaster NCE includes AAA (Authentication, Authorization, and Accounting) capabilities, reducing dependency on external servers.

B. Cloud APs support local Portal authentication.

Incorrect: Huawei Cloud APs do NOT support local Portal authentication.

Instead, Portal authentication is managed centrally by iMaster NCE, NOT by individual APs.

C. iMaster NCE can function as a Portal relay device.

Correct: It can relay authentication requests to a RADIUS or AAA server.

D. iMaster NCE can interconnect with a third-party RADIUS server.

Correct: It supports integration with external RADIUS authentication servers for enterprise authentication.

Real-World Application:

Used in Wi-Fi 6 enterprise deployments where centralized authentication, security, and policy enforcement are needed.

NEW QUESTION # 99

Which of the following methods can be used to establish IPsec SAs? (Select All that Apply)

- A. Manually establish IPsec SAs
- B. Establish IPsec SAs through template negotiation
- C. Establish IPsec SAs in IKE auto-negotiation mode
- D. Establish IPsec SAs through certificate negotiation

Answer: A,B,C,D

Explanation:

Huawei IPsec supports multiple modes for establishing Security Associations (SAs):

A). Template negotiation - Used in IPsec policy templates and dynamic VPNs.

B). IKE auto-negotiation mode - Automatically negotiates parameters via IKE Phase 1/2.

C). Certificate negotiation - IPsec peers can authenticate each other using certificates during IKE negotiation.

D). Manual mode - Static IPsec SAs can be manually configured without IKE, often used in simple or static topologies.

Exact Extract - Huawei Security Configuration Guide (USG Series):

"IPsec SAs can be established manually or dynamically through IKE, including using PSKs or certificates.

Template-based approaches simplify large-scale deployment."
