With this accessibility, you can access the Microsoft DP-300 PDF questions anytime and from anywhere. Having all the information about the Administering Relational Databases on Microsoft Azure (DP-300) Exam at your fingertips enhances your studying experience, making it easier and more effective, whether you're at home or on the go.

## Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q217-Q222):

### NEW QUESTION # 217

You have an Azure SQL database named DB 1 in the General Purpose service tier.

You need to monitor DB 1 by using SQL Insights.

What should you include in the solution? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1 = Azure Monitor Agent

Box 2 = An Azure SQL database

<https://docs.microsoft.com/en-us/azure/azure-sql/database/sql-database-paas-overview?view=azuresql>

### NEW QUESTION # 218

You have a Microsoft SQL Server database named DB1 that contains a table named Table1.

The database role membership for a user named User1 is shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation

Box 1: delete a row from Table1

Members of the db\_datawriter fixed database role can add, delete, or change data in all user tables.

Box 2: db\_datareader

Members of the db\_datareader fixed database role can read all data from all user tables.

<https://docs.microsoft.com/en-us/sql/relational-databases/security/authentication-access/database-level-roles>

### NEW QUESTION # 219

You are building a database backup solution for a SQL Server database hosted on an Azure virtual machine.

In the event of an Azure regional outage, you need to be able to restore the database backups. The solution must minimize costs.

Which type of storage accounts should you use for the backups?

- A. geo-redundant storage
- B. locally-redundant storage (LRS)
- C. zone-redundant storage (ZRS)
- D. read-access geo-redundant storage (RA-GRS)

**Answer: D**

Explanation:

Geo-redundant storage (with GRS or GZRS) replicates your data to another physical location in the secondary region to protect against regional outages. However, that data is available to be read only if the customer or Microsoft initiates a failover from the primary to secondary region. When you enable read access to the secondary region, your data is available to be read if the primary region becomes unavailable. For read access to the secondary region, enable read-access geo-redundant storage (RA-GRS) or read-access geo-zone-redundant storage (RA-GZRS).

Incorrect Answers:

A: Locally redundant storage (LRS) copies your data synchronously three times within a single physical location in the primary region. LRS is the least expensive replication option, but is not recommended for applications requiring high availability.

C: Zone-redundant storage (ZRS) copies your data synchronously across three Azure availability zones in the primary region.

D: Geo-redundant storage (with GRS or GZRS) replicates your data to another physical location in the secondary region to protect against regional outages. However, that data is available to be read only if the customer or Microsoft initiates a failover from the primary to secondary region.

#### NEW QUESTION # 220

You are performing exploratory analysis of bus fare data in an Azure Data Lake Storage Gen2 account by using an Azure Synapse Analytics serverless SQL pool.

You execute the Transact-SQL query shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

**Answer:**

Explanation:

Explanation:

Box 1: CSV files that have file named beginning with "tripdata\_2020"

Box 2: a header

FIRSTROW = 'first\_row'

Specifies the number of the first row to load. The default is 1 and indicates the first row in the specified data file. The row numbers are determined by counting the row terminators. FIRSTROW is 1-based.

Reference:

<https://docs.microsoft.com/en-us/azure/synapse-analytics/sql/develop-openrowset>

#### NEW QUESTION # 221

You have An Azure SQL managed instance.

You need to configure the SQL Server Agent service to email job notifications.

Which statement should you execute?

- A. ☐
- B. ☐
- C. ☐
- D. ☒

**Answer: D**

#### NEW QUESTION # 222

.....

To succeed on the Microsoft DP-300 exam, you require a specific Microsoft DP-300 exam environment to practice. But before settling on any one method, you make sure that it addresses their specific concerns about the DP-300 exam, such as whether or not the platform they are joining will aid them in passing the Administering Relational Databases on Microsoft Azure (DP-300) exam on the first try, whether or not it will be worthwhile, and will it provide the necessary DP-300 Questions.
