CompTIA Security+ Certification Exam Sample Questions (Q129-Q134):

NEW QUESTION # 129

A technician wants to improve the situational and environmental awareness of existing users as they transition from remote to in-office work. Which of the following is the best option?

- A. Update the content of new hire documentation.
- **B. Modify the content of recurring training.**
- C. Send out periodic security reminders.

Answer: B

Explanation:

D Implement a phishing campaign

Explanation:

Recurring training is a type of security awareness training that is conducted periodically to refresh and update the knowledge and skills of the users. Recurring training can help improve the situational and environmental awareness of existing users as they transition from remote to in-office work, as it can cover the latest threats, best practices, and policies that are relevant to their work environment. Modifying the content of recurring training can ensure that the users are aware of the current security landscape and the expectations of their roles. NEW QUESTION # 130

An organization discovers that its cold site does not have enough storage and computers available. Which of the following was most likely the cause of this failure?

- A. Backups
- B. Platform diversity
- **C. Capacity planning**
- D. Load balancing

Answer: C

Explanation:

A cold site is a backup facility that provides basic power, space, and environmental controls but does not include hardware or preconfigured systems. It is the organization's responsibility to ensure the site has adequate storage, servers, and equipment staged or available for rapid procurement.

If the cold site "does not have enough storage and computers," the cause is a failure in capacity planning (A)

. CompTIA Security+ SY0-701 highlights the need for organizations to determine:

- * Required compute capacity
- * Storage needs
- * Network bandwidth
- * Expected recovery workload
- * Hardware replacement timelines

Load balancing (B) distributes traffic; it has nothing to do with cold-site readiness. Backups (C) store data, not physical resources.

Platform diversity (D) refers to using multiple technologies to reduce systemic risk.

The issue is specifically the lack of resources, which directly reflects inadequate capacity planning.

Therefore, A is the correct answer.

NEW QUESTION # 131

An external vendor recently visited a company's headquarters for a presentation. Following the visit a member of the hosting team found a file that the external vendor left behind on a server.

The file contained detailed architecture information and code snippets. Which of the following data types best describes this file?

- A. Public
- B. Critical
- C. Government
- **D. Proprietary**

Answer: D

Explanation:

The file left by the external vendor, containing detailed architecture information and code snippets, is best described as proprietary data. Proprietary data is information that is owned by a company and is essential to its competitive advantage. It includes sensitive business information such as trade secrets, intellectual property, and confidential data that should be protected from unauthorized access.

NEW QUESTION # 132

Which of the following is the most effective way to protect an application server running software that is no longer supported from network threats?

- A. Port security
- B. Barricade
- **C. Air gap**
- D. Screen subnet

Answer: C

Explanation:

Air-gapping is the most effective way to protect an application server running unsupported software from network threats. By physically isolating the server from any network connection (no wired or wireless communication), it is protected from external cyber threats. While other options like port security or a screened subnet can provide some level of protection, an air gap offers the highest level of security by preventing any network-based attacks entirely.
