Achieve CompTIA 220-1102 Certification with Ease by Polishing Your Abilities

First and foremost, you can get the latest version of our 220-1102 study materials for free during the whole year. Second, our responsible after sale service staffs are available in twenty four hours a day, seven days a week, so if you have any problem after purchasing 220-1102 study materials, you can contact our after sale service staffs anywhere at any time. Finally, we have installed the most advanced operation machines in our website, so you can use credit for payment in the process of trading and register your personal information under a safe payment environment. Do not waver any more, the most effective and the Latest 220-1102 Study Materials is right here waiting for you.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q783-Q788):

NEW QUESTION # 783

Which of the following features can be used to ensure a user can access multiple versions of files?

- A. FileVault
- B. Multiple desktops
- C. Time Machine
- D. Remote Disc

Answer: C

Explanation:

Time Machine is a backup feature available in macOS that automatically makes hourly backups for the past 24 hours, daily backups for the past month, and weekly backups for all previous months to an external drive or NAS. It allows users to recover the entire system or specific files from any point in time, ensuring access to multiple versions of files. This feature is particularly useful for reverting to earlier versions of a document or recovering a file that has been accidentally deleted or altered. The other options, such as Multiple Desktops, Remote Disc, and FileVault, do not provide versioning capabilities for file access.

NEW QUESTION # 784

Remote employees need access to information that is hosted on local servers at the company. The IT department needs to find a solution that gives employees secure access to the company's resources as if the employees were on premises. Which of the following remote connection services should the IT team implement?

- A. SSH
- B. VNC
- C. VPN
- D. RDP

Answer: C

Explanation:

Explanation

A VPN (Virtual Private Network) is a service that allows remote employees to access the company's network resources securely over the internet as if they were on premises. A VPN encrypts the data traffic between the employee's device and the VPN server, and assigns the employee a virtual IP address that belongs to the company's network. This way, the employee can access the local servers, files, printers, and other resources without exposing them to the public internet. A VPN also protects the employee's privacy and identity by masking their real IP address and location.

NEW QUESTION # 785

A technician is setting up a newly built computer. Which of the following is the fastest way for the technician to install Windows 10?

- A. Unattended installation
- B. In-place upgrade
- C. System Restore
- D. Factory reset

Answer: A

Explanation:

Windows 10

The correct answer is D. Unattended installation. An unattended installation is a way of installing Windows 10 without requiring any user input or interaction. It uses a configuration file called answer file that contains the settings and preferences for the installation, such as the product key, language, partition, and network settings. An unattended installation can be performed by using a bootable USB flash drive or DVD that contains the Windows 10 installation files and the answer file¹. This is the fastest way for the technician to install Windows 10 on a newly built computer, as it automates the whole process and saves time.

A factory reset is a way of restoring a computer to its original state by deleting all the data and applications and reinstalling the operating system. A factory reset can be performed by using the recovery partition or media that came with the computer, or by using the Reset this PC option in Windows 10 settings². A factory reset is not a way of installing Windows 10 on a newly built computer, as it requires an existing operating system to be present.

A system restore is a way of undoing changes to a computer's system files and settings by using a restore point that was created earlier. A system restore can be performed by using the System Restore option in Windows 10 settings or by using the Advanced Startup Options menu³. A system restore is not a way of installing Windows 10 on a newly built computer, as it requires an existing operating system and restore points to be present.

An in-place upgrade is a way of upgrading an existing operating system to a newer version without losing any data or applications.

An in-place upgrade can be performed by using the Windows 10 Media Creation Tool or by running the Setup.exe file from the Windows 10 installation media. An in-place upgrade is not a way of installing Windows 10 on a newly built computer, as it requires an existing operating system to be present.

NEW QUESTION # 786

A user submits a request to have a graphics application installed on a desktop. When the technician attempts to install the application, the installation fails and the error message "Not compatible with OS" is displayed. Which of the following is the most likely reason for this error message?

- A. The graphics card driver needs to be updated.
- B. The application installer is 64-bit.
- **C. The installation requires administrative rights.**
- D. The disk space is inadequate.

Answer: C

Explanation:

The most likely reason for an error message stating "Not compatible with OS" during a software installation is that the installation requires administrative rights. Many software installations, especially those that affect system files or install drivers, require administrative privileges to execute correctly. Without these rights, the installer cannot make the necessary changes to the system, leading to such error messages.

NEW QUESTION # 787

A customer recently experienced a power outage at a SOHO. The customer does not think the components are connected properly. A print job continued running for several minutes after the power failed, but the customer was not able to interact with the computer. Once the UPS stopped beeping, all functioning devices also turned off. In case of a future power failure, the customer wants to have the most time available to save cloud documents and shut down the computer without losing any data.

Answer:

Explanation:

□ Explanation:

UPS > Surge protector = Computer, wifi router, cable modem

Surge protector = wall outlet, printer and scanner

NEW QUESTION # 788
