No matter how good the product is users will encounter some difficult problems in the process of use. Our JN0-351 real exam materials are not exceptional also, in order to enjoy the best product experience, as long as the user is in use process found any problem, can timely feedback to us, for the first time you check our JN0-351 Exam Question performance, professional maintenance staff to help users solve problems. Our JN0-351 learning reference files have a high efficient product maintenance team, and they can send the JN0-351 exam questions to you in a few minutes.

Juniper JN0-351 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Protocol Independent Routing: An essential domain for understanding routing components outside protocol dependencies, this topic enhances expertise in configuring, monitoring, and troubleshooting critical elements.
Topic 2	<ul style="list-style-type: none">• IS-IS: Aspiring Juniper networking professionals enhance their understanding of IS-IS routing protocols. This topic equips candidates with the knowledge to configure and monitor IS-IS systems, addressing specific exam challenges and practical applications.
Topic 3	<ul style="list-style-type: none">• OSPF: The concepts and operational details of OSPF are explored, providing tools for routing efficiency. Configuration and troubleshooting mastery ensure readiness for both the exam and complex enterprise environments.
Topic 4	<ul style="list-style-type: none">• High Availability: This topic covers the importance and application of high availability within Junos OS environments. Knowledge in configuring and managing these components is critical for ensuring robust and uninterrupted network operations, aligning with exam expectations.

JN0-351 Reliable Exam Simulations & JN0-351 Brain Dumps

Obtaining the JN0-351 certificate will make your colleagues and supervisors stand out for you, because it represents JN0-351 your professional skills. At the same time, it will also give you more opportunities for promotion and job-hopping. The JN0-351 latest exam dumps have different classifications for different qualification examinations, which can enable students to choose their own learning mode for themselves according to the actual needs of users. The JN0-351 Exam Question offer a variety of learning modes for users to choose from, which can be used for multiple clients of computers and mobile phones to study online, as well as to print and print data for offline consolidation.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q75-Q80):

NEW QUESTION # 75

In a LAN segment, which tie-breaker would spanning tree consider if equal-cost paths exist between two or more switches to the root bridge?

- A. interface number
- **B. bridge ID**
- C. port priority
- D. port ID

Answer: B

NEW QUESTION # 76

Which two statements are true about the default VLAN on Juniper switches? (Choose two.)

- A. The default VLAN ID is not visible.
- B. The default VLAN ID is not assigned to any interface.
- **C. The default VLAN ID can be changed.**
- **D. The default VLAN is set to a VLAN ID of 1 by default**

Answer: C,D

Explanation:

On Juniper switches, the default VLAN is set to a VLAN ID of 1 by default. This means that all interfaces on the switch are members of VLAN 1 until they are specifically assigned to another VLAN.

Therefore, option A is correct.

The default VLAN ID can be changed. This allows network administrators to configure the switch to use a different VLAN as the default, if necessary. Therefore, option D is correct.

NEW QUESTION # 77

Exhibit

Which command displays the output shown in the exhibit?

- A. show ethernet-switching table extensive
- B. show route forwarding-table family ethernet-switching
- **C. show ethernet-switching table**
- D. show route forwarding-table

Answer: C

Explanation:

The output shown in the exhibit is a brief display of the Ethernet switching table, which shows the learned Layer 2 MAC addresses for each VLAN and interface.

The command show ethernet-switching table displays the Ethernet switching table with brief information, such as the destination MAC address, the VLAN name, the forwarding state, and the interface name.

The command show route forwarding-table displays the routing table information for each protocol family, such as inet, inet6, mpls, iso, and so on. It does not show the Ethernet switching table or the MAC addresses.

The command show ethernet-switching table extensive displays the Ethernet switching table with extensive information, such as the destination MAC address, the VLAN name, the forwarding state, the interface name, the VLAN index, and the tag type. It shows more details than the brief output shown in the exhibit.

The command show route forwarding-table family ethernet-switching displays the routing table information for the ethernet-switching protocol family, which shows the destination MAC address, the next-hop MAC address, and the interface name. It does not show the VLAN name or the forwarding state.

NEW QUESTION # 78

Which two types of tunnels are able to be created on all Junos devices? (Choose two.)

- A. GRE
- B. IP-IP
- C. IPsec
- D. STP

Answer: A,B

Explanation:

GRE tunnels can be created on all Junos devices. GRE is a tunneling protocol that encapsulates a wide variety of network layer protocols inside virtual point-to-point links.

IP-IP tunnels can also be created on all Junos devices. IP-IP tunneling is used to encapsulate IP packets within IP packets, providing a simple way to tunnel IP traffic.

NEW QUESTION # 79

You are an operator for a network running IS-IS. Two routers are failing to form an adjacency. What are two reasons for this problem? (Choose two.)

- A. There is no configured ISO address on any IS-IS interface.
- B. The family iso configuration is missing from the adjacency interface.
- C. There is a mismatched area ID between the L2 routers.
- D. There are mismatched router IDs on the L2 routers.

Answer: A,B

Explanation:

The two reasons for the failure to form an adjacency in a network running IS-IS could be:

B). There is no configured ISO address on any IS-IS interface. IS-IS requires each router interface to have an ISO address configured. Without this address, the routers cannot form an adjacency 1 .

D). The family iso configuration is missing from the adjacency interface. The 'family iso' configuration is essential for IS-IS to function correctly. If this configuration is missing from the adjacency interface, it could prevent the formation of an adjacency 1 .

These explanations are based on the Enterprise Routing and Switching Specialist (JNCIS-ENT) documents and learning resources available at Juniper Networks 2 3 .

NEW QUESTION # 80

.....

Owing to our high-quality JN0-351 real test and high passing rate, our company has been developing faster and faster and gain good reputation in the world. Our education experts are adept at designing and researching exam questions and answers of JN0-351 study torrent. What's more, we can always get latest JN0-351 exam information resource. We have unique advantages on study guide materials. Our high passing rate is the leading position in this field. We are the best choice for candidates who are eager to pass exams and acquire the certifications. Our JN0-351 Actual Exam will be definitely conducive to realizing the dream of obtaining the certificate.
