First-class 101-500 Preparation Materials: LPIC-1 Exam 101, Part 1 of 2, version 5.0, Deliver You the High-quality Exam Dumps

The Exam4PDF is one of the top-rated and renowned platforms that has been offering real and valid LPIC-1 Exam 101, Part 1 of 2, version 5.0 (101-500) exam practice test questions for many years. During this long time period countless LPIC-1 Exam 101, Part 1 of 2, version 5.0 (101-500) exam candidates have passed their dream 101-500 certification and they are now certified Lpi

professionals and pursuing a rewarding career in the market.

Associated Certificate

101-500 exam is a crucial component for the careers of Linux IT professionals and one part of the requirements for LPIC-1. It assesses students' abilities to perform maintenance on the command line, configure and install a computer with Linux, and set up basic networking capabilities. It measures all the knowledge necessary for a holder of a middle-level IT certificate. With the successful completion of both 101-500 and 102-500 tests, students will obtain the desired certificate.

Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q51-Q56):

NEW QUESTION # 51
In which directory must definition files be placed to add additional repositories to yum?

- A. * /etc/yum.repos.d
- B. * /etc/yum.repos.d/
- C. * yum.repos.d/
- D. * yum.repos.d

Answer: B

Explanation:
Explanation
The /etc/yum.repos.d/ directory contains configuration files for additional yum repositories. Each file in this directory should end with .repo and contain information about one or more repositories. The yum command will read all the files in this directory and use them as sources for software packages. The format of the .repo files is similar to the /etc/yum.conf file, which contains the main configuration options for yum. Each .repo file can have one or more sections, each starting with [repository] where repository is a unique identifier for the repository. The section can have various options, such as name, baseurl, enabled, gpgcheck, etc. For example, a .repo file for the EPEL repository could look like this:
[epel]
name=Extra Packages for Enterprise Linux 7 - $basearch
baseurl=http://download.fedoraproject.org/pub/epel/7/$basearch enabled=1 gpgcheck=1 gpgkey=file:///etc/pki/rpm-gpg/RPM-GPG-KEY-EPEL-7 References:
* 2, 102.5 Use RPM and YUM package management
* 4, 101-500 Exam - Free Questions and Answers - ITExams.com
* man yum.conf

NEW QUESTION # 52
What does the command mount -a do?

- A. It shows all mounted file systems that have been automatically mounted.
- B. It opens an editor with root privileges and loads /etc/fstab for editing.
- C. It ensures that all file systems listed with the option noauto in /etc/fstab are mounted.
- D. It ensures that all file systems listed with the option auto in /etc/fstab are mounted.
- E. It ensures that all file systems listed in /etc/fstab are mounted regardless of their options.

Answer: D

NEW QUESTION # 53
What tool can you use to print shared library dependencies?

- A. ldd
- B. ldconfig
- C. libpath
- D. ldev
- E. libdep

Answer: A

NEW QUESTION # 54

An administrator has issued the following command:

grub-install --root-directory=/custom-grub /dev/sda

In which directory will new configuration files be found? (Provide the full directory path only without the filename)

- A. /custom-grub/boot/grub/
- B. /custom-grub/boot/grub

Answer: B

Explanation:
Explanation
The command grub-install is used to install GRUB on a device or a partition. The option --root-directory specifies the directory where GRUB images are put. The default is /boot/grub. The argument /dev/sda specifies the device where GRUB is installed, usually the Master Boot Record (MBR) of the disk. Therefore, the command grub-install --root-directory=/custom-grub /dev/sda will install GRUB on the MBR of /dev/sda and put the GRUB images under the directory /custom-grub/boot/grub. This means that the new configuration files, such as grub.cfg, will be found in the directory /custom-grub/boot/grub.
