As for buying NCP-MCA exam materials online, some candidates may have the concern that if the personal information is safe or not. If you do have the same concern, you can try us. If you buy NCP-MCA exam materials from us, we can ensure you that your personal information will be protected well. We respect the privacy of our customers, once the deal having finished, your personal information will be concealed. Furthermore, the NCP-MCA Exam Materials have the questions and answers, and they will be enough for you to pass the exam. Pass guarantee and money back guarantee if you fail to pass the exam.

The NCP-MCA Certification Exam is a computer-based exam that can be taken at a Pearson VUE testing center or online. NCP-MCA exam consists of 60 multiple-choice questions and must be completed within 90 minutes. The cost of the exam varies depending on your location, but it typically ranges from \$199 to \$399.

## Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q43-Q48):

### NEW QUESTION # 43

What are the two Calm SaaS API Key components? (Choose two.)

- A. Token
- B. JSON file
- C. Name
- D. SaaS Token

Answer: A,C

Explanation:

The Calm SaaS API key consists of two components: name and token. The name component is analogous to the ID or username you provide when you configure your Calm tunnel client VM to establish the tunnel connection. The token component is analogous to the password portion of the HTTP basic authentication. The Calm SaaS API key is used along with the Calm APIs and Calm DSL to access Calm. The API key file that you download will have the name and token components in the JSON format.

#### NEW QUESTION # 44

What is the prerequisite before a Single-VM Blueprint in Self-Service (formerly Calm) can be published to the Marketplace?

- A. Creating a Project
- B. Creating Approval policies and Endpoint
- C. Creating a project and Environment
- D. Creating a Endpoint

**Answer: C**

Explanation:

Before a Single-VM Blueprint in Self-Service (formerly Calm) can be published to the Marketplace, it is necessary to create both a project and an environment. A project defines the scope and access control for the blueprint, while the environment provides the necessary configurations and settings for the deployment, such as network, credentials, and other resources.

#### NEW QUESTION # 45

What component of Approval Policies sets the criteria for an approval to be triggered?

- A. Actions
- B. Conditions
- C. Alerts
- D. Jobs

**Answer: B**

Explanation:

In Approval Policies within Nutanix Calm, "Conditions" are used to set the criteria for an approval to be triggered. Conditions define the specific circumstances under which an approval process should be initiated, such as specific actions or threshold limits.

#### NEW QUESTION # 46

Which blueprint action can be applied to an AHV Linux service under the Guest Customization section?

- A. Choose the Content Library
- B. Apply a Cloud-init script
- C. Choose First Logon Commands
- D. Apply a SysPrep file

**Answer: B**

Explanation:

In the Guest Customization section of a blueprint for an AHV Linux service, you can apply a Cloud-init script.

Cloud-init is a widely used method for customizing cloud instances during boot time, allowing for automated configuration of the virtual machine's operating system.

References:

- \* Nutanix Calm documentation on Guest Customization.

#### NEW QUESTION # 47

A business uses a database software that is licensed by physical CPU socket. Only the first two hosts of Cluster 47 and Cluster 48 are licensed for the software.

The business has chosen Self-Service to automate the deployment of database server VMs. The blueprint developer needs to ensure that database VMs are only hosted on the licensed hosts.

How can the administrator complete this task in Self-Service?

- A. Within the Environment, select the Categories to apply to the database server VMs.
- B. Within the Project, use a policy to assign the category to the environment.
- C. 1. Create a category for VMs and assign another category to the appropriate Hosts.  
2. Create a Playbook to migrate the VMs to the required Hosts using these categories.
- **D. 1. Create a category for database VMs and assign another category to the appropriate Hosts.  
2. Create an Affinity Policy.  
3. Use Blueprints to assign the VM categories.**

**Answer: D**

Explanation:

The requirement to restrict VMs to specific physical hosts for licensing purposes is addressed using VM-Host Affinity Policies in Nutanix AHV, which relies on Categories. The complete configuration workflow is:

\* Categorization (Step 1): The administrator must create specific categories to tag the entities. One category (e.g., License:Oracle) is assigned to the specific Hosts (the licensed ones). Another category (e.g., App:Database) is created for the VMs.

\* Affinity Policy (Step 2): An Affinity Policy is created in Prism Central that strictly enforces that any VM with the App:Database category must run on hosts with the License:Oracle category.

\* Blueprint Assignment (Step 3): In the Self-Service Blueprint, the administrator configures the VM service to automatically apply the App:Database category upon creation.

\* When the blueprint is deployed, the VM is created with the category, and the AHV scheduler immediately respects the Affinity Policy, ensuring the VM only starts on the licensed hosts.

Options A and C are incomplete (Categories alone do not enforce placement), and Option B (Playbook migration) is a reactive "fix" rather than a proactive placement constraint, which risks non-compliance at startup.
