As is known to us, getting the newest information is very important for all people to pass the exam and get the certification in the shortest time. In order to help all customers gain the newest information about the TDA-C01 exam, the experts and professors from our company designed the best TDA-C01 Study Materials. The IT experts will update the system every day. If there is new information about the exam, you will receive an email about the newest information about the TDA-C01 study materials.

Tableau Certified Data Analyst Sample Questions (Q148-Q153):

NEW QUESTION # 148

You create a worksheet named Sales by Region and hide the title of the worksheet. You print the worksheet as a PDF and notice that the worksheet title appears. You need to prevent the title from appearing when you print the worksheet as a PDF. Which settings should configure from the File menu in Tableau Desktop?

- A. Export As Version

- B. Share
- **C. Page Setup**
- D. Export As PowerPoint
- E. Print

Answer: C

NEW QUESTION # 149

You plan to create a visualization that has a dual axis chart. The dual axis chart will contain a shape chart and a line chart will use the same measure named Population on the axis.

You need to configure the shapes to be much larger than the line.

What should you do?

- A. Change Population to a discrete dimension
- B. For the second axis select Shape on the Marks card From Select Shape Palette select Custom and then select Reset
- **C. Duplicate Population Drag the duplicate to the second Marks card and configure the size of the marks independently**
- D. Create a custom shape that is larger than the default shape and add the shape to the Shapes folder in My Repository

Answer: C

Explanation:

To configure the shapes to be much larger than the line, you need to duplicate Population and drag it to the second Marks card. This will create a dual axis chart with two measures on one axis. You can then select Shape on one Marks card and Line on another Marks card, and adjust the size of each mark independently using the Size slider or menu. Reference:

NEW QUESTION # 150

You have the following primary data source that contains a dimension named Dorm_Code.

□ You receive the following secondary data source that contains updated dorm codes.

□ You need to bring the updated dorm codes into Tableau and use the codes in existing visualizations. The new dorm codes must use the existing field name of Dorm_Code.

What should you do?

- A. Create a data blend and select Edit Primary Aliases to replace the primary data source alias values with values from the secondary data source
- B. Bring in the secondary data source as a union.
- C. Bring in the secondary table as a left join to the primary data source. From the Data Source page, select Create Calculated Field in the Dorm_Name field and enter [Dorm_Name_New] in the calculation window
- **D. Bring in the secondary data source by using relationships. From the Data pane, right-click Dorm_Name select Replace Reference, and then select Dorm_Name_New**

Answer: D

Explanation:

Using relationships: You can use relationships to link the secondary data source with the primary data source based on a common field. This will allow you to use fields from both data sources in your visualization without creating new fields or duplicating data. You can then replace references to update the dimension values. For example, you can use relationships to link the updated dorm codes with the primary data source and then replace Dorm_Code with Dorm_Code_New in your visualization.

NEW QUESTION # 151

You have the following view.

□ You want to filter the view to show only records that have a movie name starting with the word. "The". You must achieve the goal without writing any formulas.

Which type of filter should you use?

- A. Wildcard
- B. Top
- C. Condition
- D. General

Answer: A

NEW QUESTION # 152

Open the link to Book1 found on the desktop. Use the Superstore data source. Split the Customer Name field into two fields named First Name and Last Name.

- A. check the steps below in explanation

Answer: A

Explanation:

To split the Customer Name field into two fields named First Name and Last Name, you need to do the following steps:

Open the link to Book1 found on the desktop. This will open the Tableau workbook that uses the Superstore data source.

Go to the Data Source tab at the bottom of the workbook to see the data source page. You will see a table that shows the fields and values from the Superstore data source.

Right-click on Customer Name in the table and select Split from the menu. This will split the field into two fields based on a separator, which is a space by default. You will see two new fields named Customer Name - Split 1 and Customer Name - Split 2 in the table.

Right-click on Customer Name - Split 1 and select Rename from the menu. Type First Name as the new name and press Enter. This will rename the field as First Name.

Right-click on Customer Name - Split 2 and select Rename from the menu. Type Last Name as the new name and press Enter. This will rename the field as Last Name.

NEW QUESTION # 153

.....

Moreover, TDA-C01 exam questions have been expanded capabilities through partnership with a network of reliable local companies in distribution, software and product referencing for a better development.
