Salesforce Accredited B2B Commerce Administrator certification validates their skills and knowledge in creating, configuring, and managing B2B Commerce sites, as well as their ability to design and implement solutions that meet the needs of B2B customers.

Salesforce Accredited B2B Commerce Administrator Sample Questions (Q68-Q73):

NEW QUESTION # 68

What is true about installing the Cloudcraze managed package?

- A. The bandwidth exceeded limit is not impacted.
- B. A support ticket is required with Salesforce,
- C. The custom fields limit is not impacted.

- D. Custom fields are limited to 100kb.

Answer: C

Explanation:

According to the Installation Guide, installing the Cloudcraze managed package is a process that involves several steps, such as requesting access, installing dependencies, installing packages, configuring settings, and verifying installation. One of the facts that is true about installing the Cloudcraze managed package is that the custom fields limit is not impacted by the installation. The Cloudcraze managed package does not count against your org's custom fields limit because it uses custom metadata types instead of custom fields. Therefore, option D is correct. Option A is false because a support ticket is not required with Salesforce to install the Cloudcraze managed package, you only need to request access to the Cloudcraze installation site. Option B is false because the bandwidth exceeded limit is impacted by the installation, as the Cloudcraze managed package consumes some of your org's bandwidth limit. Option C is false because custom fields are not limited to 100kb, they are limited by the number of fields per object and the total size of all fields per object. Reference: Installation Guide, Installation Overview

NEW QUESTION # 69

An Administrator at Universal Containers (UC) wants to supply buyers with product-related information. Which two content types can an admin use to provide buyers with product-related information?

- A. Image
- B. Asset
- C. Document
- D. File

Answer: A,C

Explanation:

To provide product-related information, an administrator can use:

A: Document: This could include product manuals, specifications, or any other document that provides detailed information about the product.

D: Image: High-quality images can be used to visually represent the product, its usage, or any specific features, contributing to a better understanding of the product for the buyer.

These content types are instrumental in delivering comprehensive product information, enhancing the buyer's journey by providing all necessary details to make an informed purchase decision.

NEW QUESTION # 70

Which two navigation options are on the Store main page in the B2B Commerce App?

- A. Sales
- B. Product
- C. Security
- D. Content Management
- E. Contact Point Addresses

Answer: B,D

Explanation:

Explanation

Product and Content Management are two navigation options on the store main page in the B2B Commerce app. The store main page is the landing page for a store or reorder portal in the B2B Commerce app. The navigation options allow admins to access different features and settings for their B2B commerce sites.

Product allows admins to manage products, categories, price books, and product variations for their stores.

Content Management allows admins to manage content assets, collections, channels, and workspaces for their stores. References: [Store Main Page]; [Product]; [Content Management]

NEW QUESTION # 71

An Administrator has given another administrator access to the store to validate the B2B Commerce installation, but the welcome email was never received. In which two ways can the second Administrator access the store without changing the setup?

- A. Reset this user's password from Setup and have the user login again.
- B. Check the Debug Logs for the welcome email.
- C. Log in from the Contact page in the Commerce app.
- D. Enable Guest Access in Experience Builder.
- E. Log in using the link in the More Information section of the Store page.

Answer: A,C

Explanation:

If a second administrator did not receive the welcome email for B2B Commerce, they can still access the store without changing the setup by Logging in from the Contact page in the Commerce app (C). This method allows administrators with existing Salesforce credentials to access the B2B Commerce environment directly through the Commerce app, bypassing the need for a welcome email. Additionally, Resetting the user's password from Setup and having the user login again (E) is a common workaround for access issues. This approach ensures that the user can reset their password and gain access to the store without relying on the initial welcome email.

Checking Debug Logs (A), Enabling Guest Access in Experience Builder (B), and Logging in using the link in the More Information section of the Store page (D) are not standard practices for this particular scenario.

NEW QUESTION # 72

An Administrator has automated the rebuild of a store search index. The solution uses a trigger and a custom metadata value. Each time a product record is created or updated it increments a metadata counter value. If the counter value is divisible by 5, then the rebuild search index functionality is started using an API call. The automation has worked until today. In the past 10 minutes, 80 products have been updated. The B2B Store Manager complains that the store search results are out of date. The product changes are missing in the search results.

What could be the cause of this issue?

- A. The automation is triggering the search index rebuild too often. The store search index should not be rebuilt more than 10 times per day.
- B. The automation is working as designed. The B2B Store Manager needs to login again to the store to see results of the updated search index.
- C. The automation is triggering the search index rebuild too often. The store search index should not be rebuilt more than five times per hour.

Answer: C

Explanation:

The issue with the search index not reflecting recent product updates could be due to the automation triggering the search index rebuild too frequently. If the store search index is rebuilt more than five times per hour, as suggested in option (C), it can lead to performance issues and delays in updating the search results. This frequency can overwhelm the system, leading to a queue of rebuild operations that can't be processed in a timely manner, causing the search results to become outdated despite the updates to product records.
