Love is precious and the price of freedom is higher. Do you think that learning day and night has deprived you of your freedom? Then let Our SCP-NPM Guide tests free you from the depths of pain. Our study material is a high-quality product launched by the PDFBraindumps platform. And the purpose of our study material is to allow students to pass the professional qualification exams that they hope to see with the least amount of time and effort.

SolarWinds SCP-NPM (SolarWinds Network Performance Monitor (NPM)) Certification Exam is designed to test the knowledge and expertise of network administrators and engineers in using SolarWinds Network Performance Monitor (NPM) software. SolarWinds Network Performance Monitor (NPM) Exam certification exam is intended for professionals who are looking to showcase their skills in network monitoring, troubleshooting, and optimization. The SCP-NPM certification exam is recognized globally as a benchmark for network performance monitoring expertise, and achieving this certification can help professionals advance their careers and gain credibility in the industry.

The SCP-NPM Certification Exam covers a wide range of topics, including network device discovery, network topology mapping, network performance monitoring, alerting and reporting, and network troubleshooting. It is a comprehensive exam that tests the candidate's understanding of network performance monitoring and their ability to use SolarWinds NPM to optimize network performance. SCP-NPM exam is intended for IT professionals with a minimum of one year of experience in network performance monitoring and management.

## Cheap SCP-NPM Dumps & Free SCP-NPM Dumps

The SolarWinds Network Performance Monitor (NPM) Exam (SCP-NPM) certification exam is one of the top-rated career advancement certifications in the market. This SCP-NPM exam dumps have been inspiring beginners and experienced professionals since its beginning. There are several personal and professional benefits that you can gain after passing the SCP-NPM Exam. The validation of expertise, more career opportunities, salary enhancement, instant promotion, and membership of SolarWinds certified professional community.

SolarWinds NPM is a powerful tool that helps IT professionals monitor and manage network performance with ease. With NPM, IT teams can quickly identify performance issues, troubleshoot problems, and ensure that network devices and applications are running smoothly. The SCP-NPM Certification Exam is intended to help IT professionals gain a deeper knowledge of NPM and improve their skills in network performance monitoring.

## SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q47-Q52):

NEW QUESTION # 47

You configured devices to send SNMP traps to NPM, but do not see the messages in the Orion Web Console. You verified that the firewall ports are open and the devices are correctly configured. What can you verify to troubleshoot the cause?

- **A. Verify the SNMP trap service is running**
- B. Verify you configured the SNMP Traps view in the Orion Web Console
- C. Verify that you have the SNMP Trap module installed for NPM
- D. Verify you use Log Analyzer to view traps

**Answer: A**

Explanation:

The SNMP trap service is responsible for receiving, decoding, displaying, and storing the SNMP trap messages in the Log Analyzer database. If the service is not running, you will not see the messages in the Orion Web Console. You can verify the status of the service by using the Orion Service Manager or the Windows Services console. You can also restart the service if needed. The other options are not relevant for troubleshooting the cause of missing SNMP trap messages. Reference:

Monitor SNMP traps

Troubleshoot SNMP traps

Orion Service Manager

#### NEW QUESTION # 48

While building an Orion map in the NPM web console you notice that two of your devices do not show a connection between them. You verify the two devices are connected. How can you resolve this issue? (Choose all that apply.)

- A. Change the monitoring method from SNMP to CLI
- **B. Build a custom connection between the devices**
- C. Build a new Orion map and add the related entities instead of the nodes
- **D. Verify you are monitoring Layer 2 and 3 topologies**

**Answer: B,D**

Explanation:

To show the connection between two devices on an Orion map, you need to meet the following requirements1:

The devices must be monitored by NPM.

The devices must support topology and be interconnected.

The devices must have the corresponding interfaces monitored and identified as full or half duplex.

The Orion Maps feature must be enabled and configured.

If you do not see the connection between two devices on an Orion map, you should first verify that you are monitoring Layer 2 and 3 topologies for the devices. You can do this by checking the NPM Network Topology widget on the device details page. This widget will reflect what connections will be automatically drawn in Orion Maps2. If the widget does not show the expected connection, you may need to enable topology polling for the devices or check the SNMP credentials and configuration3.

If you are monitoring the correct topologies and still do not see the connection, you can build a custom connection between the devices using the Orion Maps feature. In the Map Editor, you can add the two devices to the canvas, select them, and click the Connect Objects button. Here you can specify the interface on either side and choose to add the manual connection to the database2.

Building a new Orion map and adding the related entities instead of the nodes will not resolve the issue, as the related entities are based on the same topology data as the nodes. Changing the monitoring method from SNMP to CLI will not resolve the issue, as CLI is not supported for topology polling3.

#### NEW QUESTION # 49

When a router monitored by NPM reboots, the interface indexes statuses change to unknown in NPM. What do you do after you remove the unknown interfaces?

- **A. Manually update the interface indexes**
- B. Run a list of resources on that node and add the interfaces with the updated index IDs
- C. Update the NPM internal ID numbers
- D. Run the Configuration Wizard to update the interface indexes

**Answer: A**

#### NEW QUESTION # 50

How can you add entities from NPM to monitor for all registered devices in your company domain?

- A. Add each registered device individually, and then select the entities you want to monitor
- B. Use the NPM Active Directory Discovery tool to find all registered devices on the domain
- C. Add each of your Domain Controllers as nodes to NPM and scan Active Directory Organization Units (OUs) for the registered devices
- **D. Select to query Domain Controllers in a Network Discovery and then select the Organizational Units (OUs) with the registered devices you want to scan**

**Answer: D**

Explanation:

Network Discovery is a feature of SolarWinds NPM that allows you to automatically discover and add network devices to the Orion Platform for monitoring. You can use Network Discovery to query Domain Controllers in your company domain and then select the Organizational Units (OUs) with the registered devices you want to scan. This way, you can add entities from NPM to monitor for all registered devices in your company domain in a single discovery. The other options are not as efficient or accurate as Network Discovery, as they either require manual addition of each device, or rely on the Domain Controllers to provide the list of registered devices, which may not be up-to-date or complete. Reference:

Discover your network devices and add them to the Orion Platform

Discover devices on your network using Active Directory

#### NEW QUESTION # 51

You configure an alert to send you an email when you have a high CPU load on your devices. Your NPM web console shows several devices have high CPU utilization, but you have not received any emails. What could be the issue?

- A. The hardware resources assigned to the system are too low
- B. The alert threshold is set too high
- **C. The alerts are muted on the devices**
- D. SNMP is not configured on the devices

**Answer: C**

Explanation:

One possible reason why you have not received any emails for the high CPU load alert is that the alerts are muted on the devices. Muting alerts means that the alert conditions are still evaluated, but the alert actions are not executed. This can be useful when you want to temporarily suppress notifications for planned maintenance or testing. You can mute alerts for individual nodes, groups, or applications, or for all alerts in the Orion Platform. To check if the alerts are muted on the devices, you can go to the Manage Nodes page and look for the Muted column. You can also use the Mute Alerts widget on the Orion homepage to see the status of alert muting. To unmute alerts, you can either use the same widget or the Unmute Alerts option in the node, group, or application details page. Reference: Mute alerts, Manage nodes, Mute Alerts widget
