Test SPLK-3002 Cram Pdf - SPLK-3002 Authentic Exam Questions

If candidates want to obtain certifications candidates should notice studying methods. If you do not want to purchase our Splunk SPLK-3002 new exam bootcamp materials and just want to study yourself, willpower is the most important. Passing so many exams is really not easy. Reasonable studying methods and relative work experience make you half the work with double the results. SPLK-3002 New Exam Bootcamp materials will be a shortcut for you.

The SPLK-3002 exam covers a range of topics including advanced ITSI configuration, service health monitoring, anomaly detection, and creating custom visualizations. Candidates are expected to have a deep understanding of ITSI architecture, deployment, and customization. SPLK-3002 Exam also tests the ability to troubleshoot issues, optimize performance, and integrate ITSI with other Splunk products.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q34-Q39):

NEW QUESTION # 34

What is an episode?

- A. A workflow task.
- **B. A notable event group.**
- C. A notable event.
- D. A deep dive.

Answer: B

Explanation:

It's a deduplicated group of notable events occurring as part of a larger sequence, or an incident or period considered in isolation.

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/EA/EpisodeOverview> An episode is a deduplicated group of notable events occurring as part of a larger sequence, or an incident or period considered in isolation. An episode helps you reduce alert noise and focus on the most important issues affecting your IT services. An episode is created by an aggregation policy, which is a set of rules that determines how to group notable events based on certain criteria, such as severity, source, title, and so on.

You can use episode review to view, manage, and resolve episodes in ITSI. The statement that defines an episode is:

C). A notable event group. This is true because an episode is composed of one or more notable events that are related by some common factor.

The other options are not definitions of an episode because:

A). A workflow task. This is not true because a workflow task is an action that you can perform on an episode, such as assigning an owner, changing the status, adding comments, and so on.

B). A deep dive. This is not true because a deep dive is a dashboard that allows you to analyze the historical trends and anomalies of your KPIs and metrics in ITSI.

D). A notable event. This is not true because a notable event is an alert generated by ITSI based on certain conditions or correlations, not a group of alerts.

NEW QUESTION # 35

When creating a custom deep dive, what color are services/KPIs in maintenance mode within the topology view?

- **A. Gray**
- B. Gear Icon
- C. Blue
- D. Purple

Answer: A

Explanation:

When creating a custom deep dive, services or KPIs that are in maintenance mode are shown in gray color in the topology view.

This indicates that they are not actively monitored and do not generate alerts or notable events. Reference: Deep Dives

NEW QUESTION # 36

Which of the following is a best practice when configuring maintenance windows?

- A. Develop a strategy for configuring a service's notable event generation when the service's maintenance window is open.
- B. Disable any glass tables that reference a KPI that is part of an open maintenance window.
- **C. Give the maintenance window a buffer, for example, 15 minutes before and after actual maintenance work.**
- D. Change the color of services and entities that are part of an open maintenance window in the service analyzer.

Answer: C

Explanation:

Explanation

It's a best practice to schedule maintenance windows with a 15- to 30-minute time buffer before and after you start and stop your maintenance work.

NEW QUESTION # 37

Which glass table feature can be used to toggle displaying KPI values from more than one service on a single widget?

- A. Ad-hoc search.
- **B. Service swapping.**
- C. Service templates.
- D. Service dependencies.

Answer: B

Explanation:

Reference: <https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/Visualizations#collapseDesktop8> A glass table is a visualization tool that allows you to monitor the interrelationships and dependencies across your IT and business services. You can add metrics like KPIs, ad hoc searches, and service health scores that update in real time against a background that you design. One of the features of glass tables is service swapping, which enables you to toggle displaying KPI values from more than one service on a single widget.

You can use service swapping to compare metrics across different services without creating multiple glass tables or widgets.

References: Overview of the glass table editor in ITSI, [Configure service swapping on glass tables]

NEW QUESTION # 38

What is an episode?

- A. A workflow task.
- **B. A notable event group.**
- C. A notable event.
- D. A deep dive.

Answer: B

Explanation:

It's a deduplicated group of notable events occurring as part of a larger sequence, or an incident or period considered in isolation.

Reference:

An episode is a deduplicated group of notable events occurring as part of a larger sequence, or an incident or period considered in isolation. An episode helps you reduce alert noise and focus on the most important issues affecting your IT services. An episode is created by an aggregation policy, which is a set of rules that determines how to group notable events based on certain criteria, such as severity, source, title, and so on.
