## Reliable CT-UT Test Voucher - CT-UT Sure Pass

Our CT-UT guide questions enjoy a very high reputation worldwide. This is not only because our CT-UT practical materials are affordable, but more importantly, our CT-UT useful test files are carefully crafted after years of hard work and the quality is trustworthy. If you are still anxious about getting a certificate, why not try our CT-UT Study Guide? If you have any questions about our CT-UT practical materials, you can ask our staff who will give you help. And we offer considerable services on the CT-UT exam questions for 24/7.

## ISTQB CT-UT Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Risks in Usability, User Experience and Accessibility: This domain assesses the ability of Risk Analysts to identify and analyze common risks that can affect usability, user experience, and accessibility. It differentiates between product risks—such as users being unable to use a product effectively—and project risks, including lack of expertise or insufficient usability evaluation processes. Understanding these risks helps in planning effective usability testing and evaluation.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• User Surveys: This part assesses the ability of Usability Test Analysts to design and use surveys to gather user feedback on software usability. It describes how to prepare user surveys, select appropriate questionnaires, and analyze survey responses to measure user satisfaction and other quality attributes from the user's perspective.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• Usability Testing: This section measures the practical knowledge of Usability Testers in planning, conducting, analyzing, and reporting formal usability test sessions with users. It outlines test preparation activities including writing test plans, test scripts, and tasks, as well as considerations for test locations and pilot sessions. It explains how to moderate sessions, analyze findings, classify problems by severity, and communicate results effectively to stakeholders.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Basic Concepts: This section measures the skills of Usability Analysts and covers fundamental definitions and ideas related to usability, user experience, and accessibility. It explains what usability means in terms of effectiveness, efficiency, and satisfaction within software products. User experience concepts related to emotions, perceptions, and responses before, during, and after use are included. It also addresses accessibility, focusing on usage by people with diverse abilities.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• Selecting Appropriate Methods: This domain helps Test Managers make decisions on which usability evaluation methods to apply depending on project context, resources, and maturity. It discusses criteria for selecting usability, user experience, and accessibility evaluation methods suited to different stages of development and organizational needs, including agile development scenarios.</li> </ul>

## ISTQB Certified Tester Usability Tester Sample Questions (Q11-Q16):

### NEW QUESTION # 11

Which of the following statements best describe Rapid Iterative Testing and Evaluation?

- A. Testing is informal and many potential users can be accessed
- B. Testing is quantitative
- C. Testing happens on a regular basis, e.g. each Monday
- D. Testing focuses on instant redesigns and confirming made changes

**Answer: D**

Explanation:

Rapid Iterative Testing and Evaluation (RITE) is a usability method in which usability issues are identified and addressed in short cycles. Unlike traditional usability testing, RITE allows for immediate redesigns and retesting of the improved version within the same study. The goal is to refine the design quickly based on observed usability issues. Option A confuses scheduling with methodology, B is too vague, and D inaccurately characterizes RITE as quantitative, while it is typically qualitative. Therefore, C accurately reflects the purpose and approach of RITE.

### NEW QUESTION # 12

Which of the following is a principal task of the usability tester role?

- A. Perform pre-session briefing of participants
- B. Define testing tasks
- C. Communicate with test participant
- D. Discuss findings from usability test

**Answer: C**

Explanation:

The usability tester, often synonymous with the usability test moderator in practice, is primarily responsible for interacting directly with the test participants during the usability testing sessions. This role includes communicating with participants to guide them through test tasks, answering questions without leading responses, and ensuring the session runs smoothly. Effective communication is essential to facilitate participant comfort, elicit genuine user behaviors, and capture accurate usability data.

Performing the pre-session briefing (Option A) may be done by the usability tester but is often a shared responsibility or part of test facilitation protocols. Discussing findings (Option C) typically falls to analysts or usability experts after testing sessions are completed.

and data analyzed. Defining testing tasks (Option D) is usually done by test designers or analysts during test planning, not during the test execution.

Therefore, communicating with test participants during testing is a core, principal task of the usability tester role.

#####

### NEW QUESTION # 13

A web shop owner used Google Analytics to gather information about her users. She found out that most users take about five minutes to place an order. Is the usability of the website good or bad?

- A. That depends on the accessibility of the website
- B. The usability of the website is good - five minutes is a fair amount of time
- **C. That depends on the context of use as users may have different expectations**
- D. The usability of the website is bad - five minutes is way too long

**Answer: C**

Explanation:

Usability is defined in ISO 9241-11 as the extent to which a system can be used by specified users to achieve specified goals with effectiveness, efficiency, and satisfaction in a specified context of use. Without knowing the context-such as product complexity, user familiarity, device type, or purchasing habits-it is impossible to judge whether five minutes is good or bad. For complex items, five minutes may be reasonable, while for one-click purchases, it may be excessive. Thus, usability cannot be assessed solely based on one metric like time-it must be evaluated within its full usage context.

#####

### NEW QUESTION # 14

Usability reviews aim to identify potential usability problems based on certain criteria. Which of the following is a reasonable criterion for a usability review?

- A. Statutory Code of Practice
- B. Functional requirements
- **C. Usability standards**
- D. Opinion of the management

**Answer: C**

Explanation:

Usability reviews evaluate a system or interface against established usability principles or standards to identify potential issues before user testing. A recognized criterion for such reviews includes adherence to usability standards such as ISO 9241 or the Web Content Accessibility Guidelines (WCAG). These standards are derived from years of research and user-centered design principles. Options A and C do not directly relate to usability. Functional requirements (option B) refer to what the system should do, not how usable it is.

Hence, option D is correct as usability standards provide a consistent, objective basis for evaluating usability.

#####

### NEW QUESTION # 15

Which of the following are advantages of using a usability lab?

- i. The context is natural
  - ii. Test sessions are easy to observe
  - iii. Inexpensive setup
  - iv. Similar conditions for all sessions
  - v. Easy recording of sessions
- A. iii, iv & v are true, i & ii are false
  - B. i, ii & v are true, iii & iv are false
  - C. ii & iv are true, i, iii & v are false
  - **D. ii, iv & v are true, i & iii are false**

**Answer: D**

Explanation:

Usability labs provide a controlled environment that offers several advantages for observing and recording usability test sessions. Specifically, they allow for easy observation of participants (ii), standardized conditions for each session (iv), and facilitate audio and video recording for detailed analysis (v). However, the context is not natural (i), because the lab is an artificial setting rather than the user's actual environment.

Also, setting up a professional usability lab is not inexpensive (iii); it typically involves significant costs for equipment, space, and staffing. Therefore, options ii, iv, and v are true, while i and iii are false.
