## AZ-120 Passguide & Test AZ-120 Testking

All these three AZ-120 exam questions formats are easy to use and compatible with all devices, operating systems, and web browsers. Just choose the best AZ-120 exam questions format and start Microsoft AZ-120 exam preparation without wasting further time. As far as the price of Planning and Administering Microsoft Azure for SAP Workloads exam practice test questions is concerned, these exam practice test questions are being offered at a discounted price. Get benefits from AZ-120 Exam Questions at discounted prices and download them quickly. Best of luck in AZ-120 exam and career!!!

## Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q297-Q302):

### NEW QUESTION # 297

You have an on-premises SAP environment.

Backups are performed by using tape backups. There are 50 TB of backups.

A Windows file server has BMP images of checks used by SAP Finance. There are 9 TB of images.

You need to recommend a method to migrate the images and the tape backups to Azure. The solution must maintain continuous replication of the images.

What should you include in the recommendation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

□

**Answer:**

Explanation:

□ Tape Backups - Azure Databox  
File Server - Azure Storage Explorer

**NEW QUESTION # 298**

This question requires that you evaluate the underlined text to determine if it is correct.

When deploying SAP HANA to an Azure virtual machine, you can enable Write Accelerator to reduce the latency between the SAP application servers and the database layer.

Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice that makes the statement correct.

- A. install the Mellanox driver
- B. No change is needed
- C. enable Accelerated Networking
- D. start the NIPING service

**Answer: C**

Explanation:

To further reduce network latency between Azure VMs, we [Microsoft] recommend that you choose Azure Accelerated Networking. Use it when you deploy Azure VMs for an SAP workload, especially for the SAP application layer and the SAP DBMS layer.

**NEW QUESTION # 299**

You are evaluating the migration plan.

Licensing for which SAP product can be affected by changing the size of the virtual machines?

- A. PI
- B. SAP ECC
- C. SAP Solution Manager
- D. SAP SCM

**Answer: B**

Explanation:

Scenario: Increase the performance of SAP ECC applications by moving to SAP HANA.

Topic 2, Contoso Ltd Case Study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Overview

Contoso, Ltd. is a manufacturing company that has 15,000 employees.

The company uses SAP for sales and manufacturing.

Contoso has sales offices in New York and London and manufacturing facilities in Boston and Seattle.

## Existing Environment

### Active Directory

The network contains an on-premises Active Directory domain named ad.contoso.com. User email addresses use a domain name of contoso.com.

### SAP Environment

The current SAP environment contains the following components:

- \* SAP Solution Manager
- \* SAP ERP Central Component (SAP ECC)
- \* SAP Supply Chain Management (SAP SCM)
- \* SAP application servers that run Windows Server 2008 R2
- \* SAP HANA database servers that run SUSE Linux Enterprise Server 12 (SLES 12) Problem Statements Contoso identifies the following issues in its current environment:
  - \* The SAP HANA environment lacks adequate resources.
  - \* The Windows servers are nearing the end of support.
  - \* The datacenters are at maximum capacity.

### Requirements

#### Planned Changes

Contoso identifies the following planned changes:

- \* Deploy Azure Virtual WAN.
- \* Migrate the application servers to Windows Server 2016.
- \* Deploy ExpressRoute connections to all of the offices and manufacturing facilities.
- \* Deploy SAP landscapes to Azure for development, quality assurance, and production.

All resources for the production landscape will be in a resource group named SAPProduction.

#### Business goals

Contoso identifies the following business goals:

- \* Minimize costs whenever possible.
- \* Migrate SAP to Azure without causing downtime.
- \* Ensure that all SAP deployments to Azure are supported by SAP.
- \* Ensure that all the production databases can withstand the failure of an Azure region.
- \* Ensure that all the production application servers can restore daily backups from the last 21 days.

#### Technical Requirements

Contoso identifies the following technical requirements:

- \* Inspect all web queries.
- \* Deploy an SAP HANA cluster to two datacenters.
- \* Minimize the bandwidth used for database synchronization.
- \* Use Active Directory accounts to administer Azure resources.
- \* Ensure that each production application server has four 1-TB data disks.
- \* Ensure that an application server can be restored from a backup created during the last five days within 15 minutes.
- \* Implement an approval process to ensure that an SAP administrator is notified before another administrator attempts to make changes to the Azure virtual machines that host SAP.

It is estimated that during the migration, the bandwidth required between Azure and the New York office will be 1 Gbps. After the migration, a traffic burst of up to 3 Gbps will occur.

#### Proposed Backup Policy

An Azure administrator proposes the backup policy shown in the following exhibit.

#### Azure Resource Manager Template

An Azure administrator provides you with the Azure Resource Manager template that will be used to provision the production application servers.

## NEW QUESTION # 300

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

### Answer:

Explanation:

Explanation

YES

YES

NO
