## Mule-Dev-201 Latest Mock Test, Official Mule-Dev-201 Practice Test

You can access the premium PDF file of Salesforce Mule-Dev-201 dumps right after making the payment. It will contain all the latest Mule-Dev-201 exam dumps questions based on the official Salesforce exam study guide. These are the most relevant Salesforce Mule-Dev-201 questions that will appear in the actual Salesforce Certified MuleSoft Developer exam. Thus you won't waste your time preparing with outdated Salesforce Mule-Dev-201 Dumps. You can go through Salesforce Mule-Dev-201 dumps questions using this PDF file anytime, anywhere even on your smartphone.

## Salesforce Certified MuleSoft Developer Sample Questions (Q149-Q154):

### NEW QUESTION # 149

Refer to the exhibit.

In the execution of the Scatter-Gather, the "sleep 1 sec" Flow Reference takes about 1 second to complete, and the "sleep 5 sees" Row Reference takes about 5 seconds to complete.

About how many seconds does it take from the time the Scatter-Gather is called until the Set Payload transformer is called?

□

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: C**

### NEW QUESTION # 150

What is the correct syntax for a Logger component to output a message with the contents of a JSON Object payload?

- A. The payload is: #[payload]
- B. #["The payload is: " + payload]
- C. The payload is: \$(payload)
- **D. #["The payload is: " ++ payload]**

**Answer: D**

Explanation:

Option 3 is the only correct answer as it concatenates payload with String.

Below option wont work.

#["The payload is " ++ payload]

Concatenation function expects both arguments to be string. As the question says payload is json object , this will throw error while running it. You can try this in Anypoint Studio and you will get the same result which I mentioned.

hence correct answer is

The payload is: #[payload]

### NEW QUESTION # 151

An API was designed in API Designer, published to Anypoint Exchange, then imported into API Manager.

A Mule application implements this API and is deployed to CloudHub. API Manager manages this deployed API implementation.

What is the easiest and most idiomatic (used for its intended purpose) way to enforce a Client ID Enforcement policy on this Mule application?

- A. In Anypoint Studio, code a custom policy for Client ID Enforcement and then add the custom policy to Runtime Manager for the Mule application deployment
- B. In API Designer, add Client ID Enforcement policy requirements to the API specification
- C. In Anypoint Design Center, code a custom policy for Client ID Enforcement and then publish the custom policy to the API portal in Anypoint Exchange
- **D. In API Manager, apply a Client ID Enforcement policy for the API instance**

**Answer: D**

### NEW QUESTION # 152

A Scatter-Gather processes three separate HTTP requests. Each request returns a Mule event with a JSON payload. What is the final output of the Scatter-Gather?

- A. An Array of the three Mule event Objects
- **B. An Object containing all three Mule event Objects**
- C. An Array of the three JSON payload Objects
- D. An Object containing all three JSON payload Objects

**Answer: B**

Explanation:

Correct answer is An Object containing all three Mule event Objects

The Scatter-Gather component is a routing event processor that processes a Mule event through different parallel processing routes that contain different event processors. Each route receives a reference to the Mule event and executes a sequence of one or more event processors. Each of these routes uses a separate thread to execute the event processors, and the resulting Mule event can be either the same Mule event without modifications or a new Mule event with its own payload, attributes, and variables. The Scatter-Gather component then combines the Mule events returned by each processing route into a new Mule event that is passed to the next event processor only after every route completes successfully.

The Scatter-Gather component executes each route in parallel, not sequentially. Parallel execution of routes can greatly increase the efficiency of your Mule application and may provide more information than sequential processing.

Sample output is as below

Table Description automatically generated with low confidence

□

### NEW QUESTION # 153

An On Table Row Database listener retrieves data from a table that contains record\_id, an increasing numerical column. How should the listener be configured so it retrieves new rows at most one time?

- **A. Set the watermark column to the record id column**
- B. Set the target to the record\_id column
- C. Set the target to store the last retrieved record\_id value
- D. Set the ObjectStore to store the last retrieved record\_id value

**Answer: A**

### NEW QUESTION # 154

.....

We provide 24-hour online service for all customers who have purchased Mule-Dev-201 test guide. You can send us an email to ask questions at anytime, anywhere. For any questions you may have during the use of Mule-Dev-201 exam questions, our customer service staff will be patient to help you to solve them.
