In addition to containing numerous questions similar to the Manufacturing Cloud Accredited Professional Exam (Manufacturing-Cloud-Professional) exam, the Salesforce Manufacturing-Cloud-Professional exam questions are a great way to prepare for the Salesforce Manufacturing-Cloud-Professional exam dumps.

Salesforce Manufacturing Cloud Accredited Professional Exam Sample Questions (Q97-Q102):

NEW QUESTION # 97

Before setting up Manufacturing Cloud, Universal Containers must complete certain prerequisites. One of the prerequisites is to set up Objects for Manufacturing.

Which objects must be set up for sales agreements?

- A. Accounts, Contacts, Products, and Price Books
- B. Accounts, Contacts, Products, Opportunities, and Price Books
- C. Accounts, Contacts, Products, Orders, and Price Books

Answer: A

NEW QUESTION # 98

A client has provided a list of unstructured, unprioritized requirements. What should a consultant do to advance to the next step of the project?

- A. Structure the list of requirements and spend time evaluating the impact and added value of each requirement before discussing with the client.
- B. Write a Solution Design Document detailing the required technical solution to answer the list of requirements.
- C. Prepare a template with the requirements and their associated priority, and work with the client to evaluate each item.

Answer: C

Explanation:

A consultant should prepare a template with the requirements and their associated priority, and work with the client to evaluate each item. This is the best way to advance to the next step of the project, because it helps the consultant and the client to align on the scope, objectives, and expectations of the project. It also allows the consultant to understand the client's business needs, challenges, and opportunities, and to prioritize the requirements based on their value and feasibility. By working collaboratively with the client, the consultant can also build trust and rapport, and ensure that the client is engaged and satisfied with the project outcome.

NEW QUESTION # 99

Universal Containers (UC) has implemented Sales Cloud and Service Cloud in seven countries in EMEA for about 100 users. UC has successfully tested and signed off on additional Sales Agreements functionality. In order to have control over the rollout and monitor the adoption, UC wants to roll out in a phased manner, country by country. UC follows a single-org strategy.

How should a consultant enable this rollout scenario?

- A. Deploy the new functionality and assign the Manufacturing licenses to all of the users.
- B. Deploy the new functionality and assign the permission set to the designated users.
- C. Deploy the new functionality and make the Sales Agreements tab visible for the designated users.

Answer: B

Explanation:

Explanation

n: To enable a phased rollout of the Sales Agreements functionality, a consultant should deploy the new functionality and assign the permission set to the designated users. The permission set grants access to the Sales Agreements object and related actions, such as creating, editing, approving, and activating sales agreements. By assigning the permission set to the designated users, the consultant can control who can use the new functionality and monitor the adoption. The consultant does not need to make the Sales Agreements tab visible for the designated users, as the tab is automatically visible once the permission set is assigned. The consultant also does not need to assign the Manufacturing licenses to all of the users, as the licenses are only required for users who need access to the Manufacturing Cloud features, such as account forecasting and data processing engine. NEW QUESTION # 100

Which three options can be defined by an Admin in the Setup area in Account Manager Targets?

- A. Default Currency
- B. Distribution Frequency
- C. Target Measure Type
- D. Price Book
- E. Team Member Hierarchy

Answer: B,C,E

Explanation:

Account Manager Targets is a feature of Manufacturing Cloud that allows you to set up and manage sales goals and track performance for your account managers and their teams. To use this feature, you need to enable it in Setup and define some settings that affect how targets are created, assigned, and distributed. The three options that can be defined by an admin in the Setup area in Account Manager Targets are:

Target Measure Type: This is the unit of measurement for the targets, such as revenue, volume, or any custom measure. You can define up to three target measure types for your org and assign them to different target types. For example, you can have a target type for revenue and another one for volume, and use different target measure types for each one.

Team Member Hierarchy: This is the hierarchy that determines how targets are rolled up from individual account managers to their managers and so on. You can use the standard User Role hierarchy or a custom hierarchy based on a custom object. The hierarchy affects how targets are distributed, aggregated, and reported.

Distribution Frequency: This is the frequency at which targets are distributed from parent targets to child targets. You can choose from monthly, quarterly, or yearly distribution. The distribution frequency affects how targets are calculated and displayed for different time periods.

NEW QUESTION # 101

A Salesforce Manufacturing Cloud user finds that the current sales agreement data is not displaying in Tableau CRM for Manufacturing. What two possibilities could cause this to happen?

- A. The sales agreement was linked to person accounts
- **B. The sales agreement data flow was not updated**
- C. Sales agreements are only displayed in the grid
- **D. The sales agreement was not added to the data flow**

Answer: B,D

Explanation:

The sales agreement data is not displaying in Tableau CRM for Manufacturing because the sales agreement was not added to the data flow or the sales agreement data flow was not updated.

A data flow is a set of instructions that specifies how to integrate, transform, and update data in Tableau CRM¹.

To display sales agreement data in Tableau CRM, the sales agreement object must be added to the data flow and the data flow must be run to update the data².

The sales agreement object is a custom object that stores information about the negotiated terms and conditions between a manufacturer and a customer³.

The sales agreement data flow is a prebuilt data flow that includes the sales agreement object and other related objects, such as account, product, and forecast⁴.

The sales agreement data flow can be customized to include additional objects or fields, or to apply filters or transformations⁴.

The sales agreement data flow must be run manually or scheduled to run periodically to ensure that the data in Tableau CRM is up to date⁴.
