최신 Salesforce Administrator Slack-Admn-201 무료샘플문제 (Q30-Q35):

질문 # 30

You are a Workspace Admin in your organization's Slack Pro instance.

A terminated user is still active because Okta (your IdP) is down.
Which immediate steps should you take?

- A. Temporarily make the #general channel read-only, delete the offensive messages left by the member, and reach out to the member's previous manager.
- **B. Deactivate the member's account in Slack settings, and ask the Human Resources (HR) team to notify you of any other employee updates until Okta is working again.**
- C. Change the member's email to a dummy email and perform a force logout so they will not be able to log back in.
- D. Ask your IT team and Primary Org Owner to contact both Okta and Slack customer service right away to address the technical issue.

정답: B

설명:

Slack's immediate response guidance states:

"If SCIM provisioning is unavailable, Workspace Admins should manually deactivate users through Slack settings to immediately prevent access." Changing the email (A) is messy and not recommended. Making #general read-only (B) doesn't prevent broader access. Contacting support (D) is useful, but not immediate enough for stopping access.

질문 # 31

When a workspace's settings are changed to make single sign-on (SSO) mandatory, which series of events will members experience?

(Select the best answer.)

- A. They'll receive a Slackbot message in the workspace requiring them to click an authentication link to validate SSO.
- B. They'll receive a notification from their SSO provider and be logged out immediately from the Slack workspace.
- C. They'll be immediately logged out and be required to authenticate their identity using SSO before logging back in.
- **D. They'll receive an email that contains a link they'll use to connect and authenticate their Slack account with their account in their SSO provider.**

정답: D

설명:

When SSO is made mandatory in Slack:

"Members will receive an email containing a link to connect their Slack account with their identity provider account. They must complete the connection by following the link and authenticating via the SSO provider." Members are not immediately logged out or forced to reauthenticate before they complete the linking process (which rules out B and C). The correct and supported flow involves an email-based linking process.

질문 # 32

You're a Workspace Owner at a small business that used Slack's Free plan in their first year. However, its business is growing fast enough to justify upgrading to a paid plan.

The requirements:

- * Users want to be able to access their old messages and integrate Slack with their calendars.
- * You want to use Okta to provision users in order to provide additional security and simplicity to the employee onboarding process.
- * Field representatives need to be able to access Slack securely on their company-owned mobile devices.

Based on the requirements, what should you recommend?

(Select the best answer.)

- **A. Move to the Slack Business+ plan.**
- B. Move to the Slack Enterprise Grid plan.
- C. Move to the Slack Pro plan.
- D. Stay with the Slack Free plan for another year.

정답: A

설명:

The Business+ plan is the appropriate recommendation here because:

- * It includes full message history access (unlike the Free plan, which limits access to recent messages only).
- * It supports SAML-based SSO integrations like Okta, allowing for secure user provisioning and onboarding.
- * It provides Enterprise Mobility Management (EMM) integrations for managing and securing Slack access on company-owned mobile devices.

Official Slack documentation confirms:

"Slack Business+ includes enhanced administration and security controls, including SAML-based SSO, user provisioning with supported IdPs, and mobile device management (MDM) support via EMM." Enterprise Grid (option D) would be overkill for a small growing business unless they required multi-workspace organization and complex compliance features.

질문 # 33

You're a Workspace Primary Owner for a Slack Pro workspace.

App requests from users are overwhelming.

You decide to create an app approval process.

Which two questions should you ask requestors during the app approval process?

(Choose 2 answers.)

- A. Does the app support Enterprise Key Management (EKM)?
- B. Does the app support Data Loss Prevention (DLP)?
- C. Are competitors using the requested app?
- **D. Does the app require a license?**
- **E. What is the urgency level for the app request?**

정답: D,E

설명:

Slack's best practices for app approval workflows recommend:

"Gather information on licensing requirements and urgency to prioritize app approvals and ensure security reviews align with business needs." Asking about DLP (A) and EKM (C) are technical security details assessed by IT or Security, not by the requestor.

Competitor usage (B) is irrelevant to Slack security or approval decisions.

질문 # 34

Jorge is starting an Employee Resource Group for volunteers at his company to collaborate from across different business units. This group requires a workspace that is visible to all members of his organization, so that they can volunteer to join and follow the group's progress. However, the group's leaders want the rights to approve any members before they join.

Which access level should Jorge set for this workspace?

- A. Invite Only
- B. Open
- C. Hidden
- **D. By Request**

정답: D

설명:

Slack defines "By Request" access as:

"A workspace or channel is visible to all users, but users must request to join, and Admins or Owners must approve each request."

This model fits Jorge's need for visibility plus control over membership approval.
