

Exam Questions JN0-336 Vce - JN0-336 Valid Test Sample

BONUS!!! Download part of TorrentExam.JN0-336 dumps for free: <https://drive.google.com/open?id=1Hid9kCcXBefZCzy3o-zlIqvJFkPBhkAu>

If candidates are going to buy JN0-336 test dumps, they may consider the problem of the fund safety. If you are thinking the same question like this, our company will eradicate your worries. We choose the international third party to ensure the safety of the fund. The JN0-336 Test Dumps are effective and conclusive, you just need to use the least time to pass it. If you choose us, it means you choose the pass.

The desktop practice test design is best for self-appraisal and decreases the possibilities of disappointment in the Security, Specialist (JNCIS-SEC) (JN0-336) Exam. It is upheld by each window PC which assists clients with clearing the Juniper JN0-336 certification exam with passing marks. The web-based format can be gotten online without introducing the product for the Juniper JN0-336 Exam. The web-based practice test is upheld by every one of the working frameworks and programs which will be useful for Security, Specialist (JNCIS-SEC) (JN0-336) exam preparation.

Exam Questions JN0-336 Vce - First-grade Juniper JN0-336 Valid Test Sample Pass Guaranteed

We very much welcome you to download the trial version of JN0-336 practice engine. Our ability to provide users with free trial versions of our JN0-336 exam questions is enough to prove our sincerity and confidence. And we have three free trial versions according to the three version of the JN0-336 study braindumps: the PDF, Software and APP online. And you can try them one by one to know their functions before you make your decision. It is better to try before purchase.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q11-Q16):

NEW QUESTION # 11

On which three Hypervisors is vSRX supported? (Choose three.)

- A. Hyper-V
- B. KVM
- C. Citrix Hypervisor
- D. VMware ESXI
- E. Oracle VM

Answer: A,B,D

Explanation:

vSRX is a virtual firewall that runs as a software instance on a hypervisor. A hypervisor is a software layer that allows multiple virtual machines to run on a single physical host. vSRX supports three hypervisors: VMware ESXi, Hyper-V, and KVM. VMware ESXi is a hypervisor that runs on x86 servers and supports various operating systems and applications. Hyper-V is a hypervisor that runs on Windows Server and supports Windows and Linux virtual machines. KVM (Kernel-based Virtual Machine) is a hypervisor that runs on Linux and supports Linux, Windows, and other operating systems.

NEW QUESTION # 12

You are troubleshooting unexpected issues on your JIMS server due to out of order event log timestamps. Which action should you take to solve this issue?

- A. Enable time synchronization on the JIMS server.
- **B. Enable time synchronization on the domain controllers.**
- C. Enable time synchronization on the SRX Series devices.
- D. Enable time synchronization on the client devices.

Answer: B

Explanation:

To solve the issue of out of order event log timestamps on your JIMS server, you should enable time synchronization on the domain controllers. JIMS (Juniper Identity Management Service) is a Windows service that collects user, device, and group information from Active Directory domains or syslog sources and provides it to SRX Series devices and CSO for identity-based security policies. JIMS relies on the timestamps of the event logs generated by the domain controllers to track user logins, logouts, and IP address changes. If the domain controllers have different or inaccurate clocks, the event logs may have out of order or incorrect timestamps, which can cause JIMS to miss or misinterpret some events and affect its accuracy and performance. Therefore, you should ensure that all the domain controllers in your network are synchronized with a reliable time source, such as an NTP server or a Windows Time service. NEW QUESTION # 13

Which two devices would you use for DDoS protection with Policy Enforcer? (Choose two.)

- A. QFX
- B. vQFX
- **C. vMX**
- **D. MX**

Answer: C,D

Explanation:

The MX and vMX devices can be used for DDoS protection with Policy Enforcer. Policy Enforcer is a Juniper Networks solution that provides real-time protection from DDoS attacks. It can be used to detect and block malicious traffic, and also provides granular control over user access and policy enforcement.

The MX and vMX devices are well-suited for use with Policy Enforcer due to their high-performance hardware and advanced security features.

NEW QUESTION # 14

Which two statements are correct about the Junos IPS feature? (Choose two.)

- **A. IPS uses protocol anomaly rules to detect unknown attacks.**
- **B. IPS is integrated as a security service on SRX Series devices.**
- C. IPS uses sandboxing to detect unknown attacks.
- D. IPS is a standalone platform running on dedicated hardware or as a virtual device.

Answer: A,B

Explanation:

Junos IPS is a feature that provides intrusion prevention and detection services on SRX Series devices.

It monitors network traffic and compares it against predefined signatures or custom rules to identify and block malicious or unwanted packets. Two statements that are correct about the Junos IPS feature are:

IPS is integrated as a security service on SRX Series devices: Junos IPS is not a separate platform or device, but a security service that runs on SRX Series firewalls. It can be enabled and configured as part of the security policy on the SRX Series device and applied to specific zones, interfaces, or traffic flows.

IPS uses protocol anomaly rules to detect unknown attacks: Junos IPS uses two types of rules to detect attacks: signature rules and protocol anomaly rules. Signature rules match traffic against known attack patterns or signatures and block them based on predefined actions. Protocol anomaly rules detect deviations from the expected behavior or structure of common protocols, such as TCP, UDP, ICMP, etc.

Protocol anomaly rules can help identify unknown or zero-day attacks that may not have a signature yet.

NEW QUESTION # 15

Which two steps are necessary to prepare the Active Directory domain for a JIMS installation? (Choose two.)

- A. Add limited access user accounts to Active Directory groups.
- B. Create three limited access user accounts.
- C. Add one full access user account to Active Directory groups.
- D. Create two limited access user accounts.

Answer: A,D

Explanation:

The correct answers are A and D. Preparing Active Directory for JIMS requires creating limited-permission service accounts and assigning those accounts to the required Active Directory groups. Juniper's JIMS deployment guidance states that you must create service accounts so JIMS can read from the defined directory services and identity producers; if PC probing is used, a service account is also required for that function. The same JIMS documentation includes a section named Configure Limited-Permission User Accounts, followed by Add Limited Permission User Accounts to Active Directory Groups.

Option A is correct because the JIMS preparation workflow commonly uses limited-permission accounts for event log access and PC probe access. Juniper identifies accounts such as JIMS-EventLogRemoteAccess and JIMS-PC-Probe in the Active Directory group-membership procedure. Option D is correct because those limited accounts must be added to the proper AD groups, including Event Log Readers and the groups required for remote management or PC probe operation.

Option B is wrong because the tested preparation requirement is not three limited-access accounts. Option C is wrong because JIMS should not be prepared by adding a broad full-access account; the course objective is least-privilege identity collection.

Reference topics: JIMS, Active Directory preparation, limited-permission service accounts, Event Log Readers, PC probe account.

NEW QUESTION # 16

.....

If you feel that you purchase TorrentExam Juniper JN0-336 exam training materials, and use it to prepare for the exam is an adventure, then the whole of life is an adventure. Gone the furthest person is who are willing to do it and willing to take risks. Not to mention that TorrentExam Juniper JN0-336 exam training materials are many candidates proved in practice. It brings the success of each candidate is also real and effective. Dreams and hopes are important, but more important is to go to practice and prove. The TorrentExam Juniper JN0-336 Exam Training materials will be successful, select it, you have no reason unsuccessful !
