Valid Microsoft AI-901 Reliable Exam Prep | Try Free Demo before Purchase

There is no doubt that you can certainly understand every important knowledge point without difficulty and pass the exam successfully with our AI-901 learning prep as long as you follow the information that we provide to you. After you purchase our AI-901 test materials, then our staff will immediately send our AI-901 training guide to you in a few minutes. Please believe that we dare to guarantee that you will pass the AI-901 exam for sure because we have enough confidence in our AI-901 preparation torrent.

Microsoft Azure AI Fundamentals Sample Questions (Q21-Q26):

NEW QUESTION # 21

Hotspot Question

Select the answer that correctly completes the sentence.

When content is submitted to Azure Content Understanding in Foundry Tools, the analysis is

<input type="checkbox"/> synchronous
<input type="checkbox"/> asynchronous
<input type="checkbox"/> returned only as unstructured plain text
<input type="checkbox"/> limited to optical character recognition (OCR)-only processing

Answer:

Explanation:

NEW QUESTION # 22

You are developing an application that analyzes voicemail recordings by using Azure Content Understanding in Foundry Tools. You need to extract a transcript and structured information from the recordings.

Which type of analyzer should you use?

- A. image analyzer
- B. audio analyzer
- C. document analyzer
- D. video analyzer

Answer: B

NEW QUESTION # 23

What are two purposes of instructions when prompting a generative AI model? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. defines the agent's role and behavior
- B. selects which model to use
- C. defines constraints on the model's responses
- D. defines the tokens per minute (TPM) allocation for the model
- E. defines the Azure region where inference occurs

Answer: A,C

NEW QUESTION # 24

You have a Microsoft Foundry project that contains a generative AI model deployment.

You test the model by using the Foundry playground.

You need to develop an application that sends requests to the deployed model.

Which information must the application include to call the model?

- A. The model training dataset
- B. The exported playground session history
- C. The model endpoint and authentication credentials
- D. The Foundry project display name

Answer: C

Explanation:

To call a deployed Azure OpenAI model from an application, the app must know the service endpoint and authenticate its request. Microsoft documentation states that Azure OpenAI supports API key authentication or Microsoft Entra ID authentication, and API key authentication requires including the API key in the request. Microsoft quickstart guidance also states that to successfully make a call against Azure OpenAI, you need an endpoint and a key.

The application does not need the model training dataset, the Foundry project display name, or exported playground session history to call the deployed model.

NEW QUESTION # 25

You are building a Conversational Language Understanding model for an e-commerce business.

You need to ensure that the model detects when utterances are outside the intended scope of the model.

What should you do?

- A. Create a prebuilt task entity
- B. Export the model
- C. Create a new model
- **D. Add utterances to the None intent**

Answer: D

Explanation:

The None intent is a required intent and can't be deleted or renamed. The intent is meant to categorize utterances that don't belong to any of your other custom intents. An utterance can be predicted as the None intent if the top scoring intent's score is lower than the None score threshold.
