Actual 200-301 Tests & 200-301 Valid Exam Bootcamp

If you are troubled with 200-301 exam, you can consider down our free demo. You will find that our latest 200-301 exam torrent are perfect paragon in this industry full of elucidating content for exam candidates of various degree to use. Our results of latest 200-301 Exam Torrent are startlingly amazing, which is more than 98 percent of exam candidates achieved their goal successfully. That also proved that 200-301 Test Dumps ensures the accuracy of all kinds of learning materials is extremely high.

Cisco 200-301 Certification Exam is a comprehensive test designed to assess an individual's knowledge and skills in networking concepts and technologies. Cisco Certified Network Associate Exam certification is a globally recognized credential that validates the expertise of network professionals in various aspects of IT, including security, automation, and networking fundamentals. 200-301 Exam is a combination of theory and practical knowledge, covering topics such as network access, IP connectivity, network security, automation, and programmability.

Cisco Certified Network Associate Exam Sample Questions (Q860-Q865):

NEW QUESTION # 860

Which technology allows for multiple operating systems to be run on a single host computer?

- A. network port ID visualization
- **B. server visualization**
- C. virtual device contexts
- D. virtual routing and forwarding

Answer: B

NEW QUESTION # 861

Drag and drop the attack-mitigation techniques from the left onto the Types of attack that they mitigate on the right.

configure 802.1x authentication	802.1q double-tagging VLAN-hopping attack
configure DHCP snooping	MAC flooding attack
configure the native VLAN with a nondefault VLAN ID	man-in-the-middle spoofing attack
disable DTP	switch-spoofing VLAN-hopping attack

Answer:

Explanation:

configure 802.1x authentication	configure the native VLAN with a nondefault VLAN ID
configure DHCP snooping	configure 802.1x authentication
configure the native VLAN with a nondefault VLAN ID	configure DHCP snooping
disable DTP	disable DTP

802.1q double-tagging VLAN-hopping attack	configure the native VLAN with a nondefault VLAN ID
MAC flooding attack	configure 802.1x authentication
man-in-the-middle spoofing attack	configure DHCP snooping
switch-spoofing VLAN-hopping attack	disable DTP

NEW QUESTION # 862

Refer to the exhibit. What is the effect of this configuration?

```
ip arp inspection vlan 2
interface fastethernet 0/1
switchport mode access
switchport access vlan 2
```

- A. The switch port remains down until it is configured to trust or untrust incoming packets
- B. The switch port remains administratively down until the interface is connected to another switch
- **C. The switch port interface trust state becomes untrusted**
- D. Dynamic ARP inspection is disabled because the ARP ACL is missing

Answer: C

Explanation:

Dynamic ARP inspection (DAI) is a security feature that validates ARP packets in a network. It intercepts, logs, and discards ARP packets with invalid IP-to-MAC address bindings. This capability protects the network from certain man-in-the-middle attacks. After enabling DAI, all ports become untrusted ports.

NEW QUESTION # 863

Which command automatically generates an IPv6 address from a specified IPv6 prefix and MAC address of an interface?

- A. **ipv6 address autoconfig**
- B. ipv6 address 2001:DB8:5:112::/64 eui-64
- C. ipv6 address 2001:DB8:5:112::2/64 link-local
- D. ipv6 address dhcp

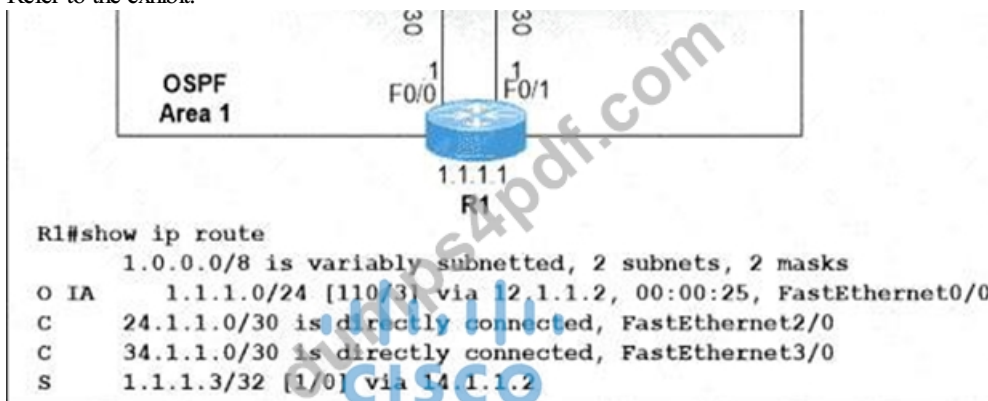

Answer: A

Explanation:

The "ipv6 address autoconfig" command causes the device to perform IPv6 stateless address autoconfiguration to discover prefixes on the link and then to add the EUI-64 based addresses to the interface. Addresses are configured depending on the prefixes received in Router Advertisement (RA) messages. The device will listen for RA messages which are transmitted periodically from the router (DHCP Server). This RA message allows a host to create a global IPv6 address from: + Its interface identifier (EUI-64 address) + Link Prefix (obtained via RA) Note: Global address is the combination of Link Prefix and EUI-64 address

NEW QUESTION # 864

Refer to the exhibit.

Which two values does router R1 use to determine the best path to reach destinations in network 1,0.0.0/8? (Choose two.)

- A. lowest cost to reach the next hop
- B. highest administrative distance
- C. **longest prefix match**
- D. highest metric
- E. **lowest metric**

Answer: C,E
