

Top ADA-C01 Latest Exam Cost | High Pass-Rate Exam ADA-C01 Revision Plan: SnowPro Advanced Administrator

BONUS!!! Download part of iPassleader ADA-C01 dumps for free: <https://drive.google.com/open?id=1I-JXJRV6b-ZviSgOM4McbC4nzHUPkR9P>

Three versions are available for ADA-C01 study materials, so that you can get the version you want according to your own needs. ADA-C01 PDF version is printable, and you can study anytime and anyplace. ADA-C01 Online test engine is convenient and easy to learn, it supports all web browsers, and you can use in your phone, Android and IOS both ok. One of outstanding features of ADA-C01 Online soft test engine is that it has testing history and performance review, and you can have a general review of what you have learned before next training. ADA-C01 Soft test engine can be used in more than 200 computers, and you use this version in your computer, and it supports MS operating system.

As is known to all, ADA-C01 practice test simulation plays an important part in the success of exams. By simulation, you can get the hang of the situation of the real exam with the help of our free demo of ADA-C01 exam questions. Just as an old saying goes, knowing the enemy and yourself, you can fight a hundred battles with no danger of defeat. Simulation of our ADA-C01 Training Materials make it possible to have a clear understanding of what your strong points and weak points are and at the same time, you can learn comprehensively about the ADA-C01 exam and pass it easily.

ADA-C01 Latest Exam Cost – High Pass-Rate Exam Revision Plan for ADA-C01: SnowPro Advanced Administrator

Now are you in preparation for ADA-C01 exam? If so, you must be a man with targets. Our iPassleader are committed to help such a man with targets to achieve the goal. ADA-C01 exam simulation software developed by us are filled with the latest and comprehensive questions. If you buy our product, we will offer one year free update of the questions for you. With our software, passing ADA-C01 Exam will no longer be the problem.

Snowflake SnowPro Advanced Administrator Sample Questions (Q49-Q54):

NEW QUESTION # 49

Company A uses Snowflake to manage audio files of call recordings. Company A hired Company B, who also uses Snowflake, to transcribe the audio files for further analysis.

Company A's Administrator created a share.

What object should be added to the share to allow Company B access to the files?

- A. A secure view with a column for file URLs.
- B. A secure view with a column for the stage name and a column for the file path.
- **C. A secure view with a column for pre-signed URLs.**
- D. A secure view with a column for METADATA\$FILENAME.

Answer: C

Explanation:

Explanation

According to the Snowflake documentation¹, pre-signed URLs are required to access external files in a share.

A secure view can be used to generate pre-signed URLs for the audio files stored in an external stage and expose them to the consumer account. Option A is incorrect because file URLs alone are not sufficient to access external files in a share. Option C is incorrect because METADATA\$FILENAME only returns the file name, not the full path or URL. Option D is incorrect because the stage name and file path are not enough to generate pre-signed URLs.

NEW QUESTION # 50

A requirement has been identified to allow members of a corporate Data Product team to bring in data sets from the Snowflake Marketplace. The members of this team use the role DP_TEAM.

What grant statements must the ACCOUNTADMIN execute in order for the DP TEAM role to import and work with data from the Marketplace?

- A. grant imported privileges on account to role dp_team;
grant create database on account to role dp_team;
- **B. grant import share on account to role dp_team;
grant create database on account to role dp_team;**
- C. grant marketplace in account to role dp_team;
grant create database from share to role dp_team;
- D. grant usage on snowflake_marketplace to role dp_team;
grant create database on account to role dp_team;

Answer: B

Explanation:

Explanation

Option D is the correct answer because it follows the steps described in the Snowflake documentation for importing data from the Snowflake Marketplace. The ACCOUNTADMIN role needs to grant the IMPORT SHARE privilege on the account to the DP_TEAM role, which allows the role to import data from any provider in the marketplace. The ACCOUNTADMIN role also needs to grant the CREATE DATABASE privilege on the account to the DP_TEAM role, which allows the role to create a database from a share. Option A is incorrect because there is no MARKETPLACE privilege in Snowflake. Option B is incorrect because the USAGE privilege on SNOWFLAKE_MARKETPLACE is not sufficient to import data from the marketplace. Option C is incorrect because there is no IMPORTED PRIVILEGES privilege in Snowflake.

NEW QUESTION # 51

A company has set up a new Snowflake account. An Identity Provider (IdP) has been configured for both Single Sign-On (SSO) and SCIM provisioning.

What maintenance is required to ensure that the SCIM provisioning process continues to operate without errors?

- A. The IdP service account requires a new RSA key pair to be generated every six months.
- B. The Administrator must issue a POST RENEW call to the REST API at least once every six months.
- C. The IdP Administrator must issue a REFRESH transaction at least once every six months to synchronize all users and roles.
- **D. The OAuth Bearer Tokens have a lifespan of six months and must be regenerated prior to expiration.**

Answer: D

Explanation:

According to the Snowflake documentation¹, the authentication process for SCIM provisioning uses an OAuth Bearer token and this token is valid for six months. Customers must keep track of their authentication token and can generate a new token on demand. If the token expires, the SCIM provisioning process will fail. Therefore, the token must be regenerated before it expires. The other options are not required for SCIM provisioning.

NEW QUESTION # 52

A retailer uses a TRANSACTIONS table (100M rows, 1.2 TB) that has been clustered by the STORE_ID column (varchar(50)). The vast majority of analyses on this table are grouped by STORE_ID to look at store performance. There are 1000 stores operated by the retailer but most sales come from only 20 stores. The Administrator notes that most queries are currently experiencing poor pruning, with large amounts of bytes processed by even simple queries. Why is this occurring?

- A. The cardinality of the stores to transaction count ratio is too low to use the STORE_ID as a clustering key.
- **B. Sales across stores are not uniformly distributed.**
- C. The table is not big enough to take advantage of the clustering key.
- D. The STORE_ID should be numeric.

Answer: B

Explanation:

According to the Snowflake documentation¹, clustering keys are most effective when the data is evenly distributed across the key values. If the data is skewed, such as in this case where most sales come from only 20 stores out of 1000, then the micro-partitions will not be well-clustered and the pruning will be poor. This means that more bytes will be scanned by queries, even if they filter by STORE_ID. Option A is incorrect because the data type of the clustering key does not affect the pruning. Option B is incorrect because the table is large enough to benefit from clustering, if the data was more balanced. Option D is incorrect because the cardinality of the clustering key is not relevant for pruning, as long as the key values are distinct.

1: Considerations for Choosing Clustering for a Table | Snowflake Documentation

NEW QUESTION # 53

A user accidentally truncated the data from a frequently-modified table. The Administrator has reviewed the query history and found the truncate statement which was run on 2021-12-12 15:00 with query ID 8e5d0ca9-005e-44e6-b858-a8f5b37c5726. Which of the following statements would allow the Administrator to create a copy of the table as it was exactly before the truncated statement was executed, so it can be checked for integrity before being inserted into the main table?

- **A. CREATE TABLE RESTORE_TABLE CLONE CURRENT_TABLE before (statement => '8e5d0ca9-005e-44e6-b858-a8f5b37c5726');**
- B. SELECT * FROM CURRENT_TABLE before (statement => '8e5d0ca9-005e-44e6-b858-a8f5b37c5726');
- C. CREATE TABLE RESTORE_TABLE CLONE CURRENT_TABLE BEFORE (timestamp => '2021-12-12 00:00');
- D. INSERT INTO CURRENT_TABLE SELECT * FROM CURRENT_TABLE before (statement => '8e5d0ca9-005e-44e6-b858-a8f5b37c5726');

Answer: A

Explanation:

□ Scenario:

A TRUNCATE command was accidentally run on a frequently modified table.

Query ID and timestamp are known.

Goal: restore a copy of the table as it existed right before the problematic statement, without affecting the current table.

□ Why Option D is Correct:

sql

CopyEdit

```
CREATE TABLE RESTORE_TABLE CLONE CURRENT_TABLE  
BEFORE (STATEMENT => '8e5d0ca9-005e-44e6-b858-a8f5b37c5726');
```

This uses Zero-Copy Cloning + Time Travel.

The BEFORE (STATEMENT => ...) clause restores the exact state of the table before the TRUNCATE ran.

Creating a clone ensures the original table remains untouched for integrity checks before merging data back.

❑ Why Others Are Incorrect:

A . BEFORE (timestamp => '2021-12-12 00:00')

Wrong timestamp: that's 15 hours before the truncate happened. Too early; may lose needed updates.

B . SELECT * FROM CURRENT_TABLE before (statement => ...)

Syntax is invalid: SELECT can't use BEFORE (STATEMENT => ...) directly like this.

C . INSERT INTO CURRENT_TABLE SELECT * FROM CURRENT_TABLE before (statement => ...) Same syntax issue.

Also risky - directly inserting into the original table without validating the data first.

SnowPro Administrator Reference:

Cloning with Time Travel

Time Travel with Statement ID

NEW QUESTION # 54

.....

Our web backend is strong for our ADA-C01 study braindumps. No matter how many people are browsing our websites at the same time, you still can quickly choose your favorite ADA-C01 exam questions and quickly pay for it. There has no delay reaction of our website. So you can begin your pleasant selecting journey on our websites. And you will find our ADA-C01 practice materials are easy to download.

Exam ADA-C01 Revision Plan: <https://www.ipassleader.com/Snowflake/ADA-C01-practice-exam-dumps.html>

Firstly, ADA-C01 certification examinations are admittedly difficult and the pass rate is really low, As everyone knows ADA-C01 certification is significant certification in this field, After discussing it with many Snowflake Exam ADA-C01 Revision Plan professionals and getting their positive feedback, the study material has been made, Buy our SnowPro Advanced Administrator ADA-C01 dumps and pass your SnowPro Advanced: Administrator certification exam.

It was designed as a fun and nifty method to showcase video pieces ADA-C01 that will make your kids look cuter, your meals tastier, your car shinier, and your Facebook posts much more fun.

Why Integrate with Flash Builder, Firstly, ADA-C01 Certification examinations are admittedly difficult and the pass rate is really low, As everyone knows ADA-C01 certification is significant certification in this field.

Efficient Snowflake - ADA-C01 Latest Exam Cost

After discussing it with many Snowflake professionals and getting their positive feedback, the study material has been made, Buy our SnowPro Advanced Administrator ADA-C01 dumps and pass your SnowPro Advanced: Administrator certification exam.
