NEW QUESTION # 30

Takeshi is an Org Admin on Enterprise Grid. A business leader asks him to create an org-wide channel for a cross-functional company project, but he replies that he needs to create a cross-workspace channel instead.

Which of the following best describes why a multi-workspace channel is more appropriate than an org-wide channel in this scenario?

- A. Org-wide channels are discoverable by all workspaces in the same Grid org and should only be used for information that applies to all employees.
- B. Multi-workspace channels can be archived at the end of the project, but org-wide channels cannot.
- C. There is a limit of ten org-wide channels, and this project would not necessitate creating one.
- D. Org-wide channels are created by default when Slack is first implemented and cannot be reconfigured afterwards.

Answer: A

Explanation:

In Enterprise Grid, an org-wide channel is intended for communications relevant to all members across all workspaces. Slack documentation states:

"Org-wide channels are automatically shared with every workspace in your organization and should be used for information that applies to everyone, such as company-wide announcements." Since a cross-functional project would involve specific participants and not the entire organization, a multi-workspace channel is a more appropriate and flexible solution.

NEW QUESTION # 31

You're an Org Owner for a financial organization's Slack Enterprise Grid.

Someone accidentally shared confidential financial statements in a public Slack channel.

You have since deleted the file; however, you want to track which users have downloaded the file from Slack.

What is the best way to do this?

(Select the best answer.)

- A. Use the Audit Logs API to export the required public channel data.
- B. Use the Audit Logs API to audit the file download action in the required public channel.
- C. Use the Discovery APIs to export the required public channel data.
- D. Use the Import/Export Data tool under workspace settings to export the required public channel data.

Answer: B

Explanation:

Slack recommends for security auditing:

"The Audit Logs API can capture file download activities, including which user downloaded a specific file." Discovery APIs (A) help with content search/export, not action tracking. Audit Logs API is for actions like downloads (B). Option C (export public channel data) and D (workspace data export) won't show specific download activities.
