NEW QUESTION # 717
Which of the following tools examines a system for a number of known weaknesses and alerts the administrator?

- A. COPS

- B. SATAN
- C. SAINT
- D. Nessus

Answer: A

NEW QUESTION # 718

Which command is used to change the permissions of a file or directory?

- A. rmdir
- B. chmod
- C. systemctl
- D. kill

Answer: B

Explanation:
The command used to change the permissions of a file or directory in Linux is chmod (change mode). The chmod command allows users to set or modify the access permissions for file system objects (files and directories). These permissions determine the actions that can be performed by different classes of users: the file owner, members of the file's group, and others. The command syntax typically includes the permissions to be set, which can be expressed in either symbolic or numeric format, and the name of the target file or directory.

NEW QUESTION # 719
