Cisco Supporting Cisco Devices for Field Technicians Sample Questions (Q37-Q42):

NEW QUESTION # 37
Which two network design strategies in Cisco data center solutions improve fault tolerance and high availability? (Choose two.)

- A. Access layer switch deployment
- B. Virtual port channels for link aggregation
- C. High-density 10/40/100 gigabit Ethernet connectivity
- D. Redundant supervisor engines and fabric modules
- E. SAN extension over IP networks (FCIP)

Answer: B,D

Explanation:
To ensure high availability and fault tolerance in Cisco data center designs, two effective strategies include:
Redundant Supervisor Engines and Fabric Modules: These provide failover capabilities, so if one supervisor or fabric module fails, another can take over, maintaining network operations without interruption.
Virtual Port Channels (vPCs): vPCs allow connections to be made to two physical switches while appearing as one logical switch. This prevents loops and adds redundancy and load balancing, which is critical in high-availability environments.
Other options may enhance performance (e.g., high-density Ethernet) or extend functionality (e.g., FCIP), but do not directly contribute to fault tolerance and high availability in the same way.

NEW QUESTION # 38
How must the power to a system with dual power supplies on a Cisco Nexus switch be connected?

- A. Connect both power supplies to a single power source.
- B. Connect each power supply to a separate power source.
- C. Connect both power supplies to a power distribution unit with built-in redundancy.
- D. Connect the primary power supply to the main source and the secondary to a backup generator.

Answer: B

Explanation:
In a Cisco Nexus switch with dual power supplies, the recommended method is to connect each power supply to a separate power source (Option C). This ensures power redundancy and fault tolerance.
If one power source fails (e.g., due to a power outage or circuit failure), the switch can continue operating uninterrupted using the second power source. Connecting both to a single source (Option D) defeats the purpose of redundancy.

- A. It offers better integration with non-Cisco products
- B. It requires less local storage
- C. It provides faster hardware upgrades
- D. It allows management from anywhere without on-premises software

Answer: D

Centralized visibility and control over UCS servers and HyperFlex infrastructure Remote firmware upgrades and configuration Policy-driven automation Unlike on-premises tools, Intersight eliminates the overhead of maintaining dedicated infrastructure for management.
