なぜ受験生はほとんどTopexamを選んだのですか。Topexamは実践の検査に合格したもので、Topexamの広がりがみんなに大きな利便性と適用性をもたらしたからです。Topexamが提供したAPICSのCPIM-8.0試験資料はみんなに知られているものですから、試験に受かる自信がないあなたはTopexamのAPICSのCPIM-8.0試験トレーニング資料を利用しなければならないですよ。Topexamを利用したら、あなたはぜひ自信に満ちているようになり、これこそは試験の準備をするということを感じます。

APICS CPIM-8.0 認定試験の出題範囲：

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">Supply: This module tests the competencies of Procurement Specialists in managing supply chains effectively. It involves creating master schedules for production planning, maintaining these schedules over time, material requirements planning (MRP), capacity requirements planning (CRP), supplier management practices, and purchasing strategies during product life cycle changes. A key skill measured here is "validating master schedules."
トピック 2	<ul style="list-style-type: none">Quality, Technology, and Continuous Improvement: This section assesses skills of Quality Assurance Specialists, focusing on quality assurance methodologies enhanced by technology to drive continuous improvement efforts. A key skill measured here is "enhancing quality metrics."
トピック 3	<ul style="list-style-type: none">Demand: This section evaluates the abilities of Demand Analysts in managing demand through forecasting techniques. It explores sources of demand data for accurate forecasting and evaluating forecast performance to improve future predictions. One important skill evaluated is "forecasting demand accurately."

APICS Certified in Planning and Inventory Management (CPIM 8.0) 認定 CPIM-8.0 試験問題 (Q199-Q204):

質問 # 199

Corporate fraud has historically been difficult to detect. Which of the following methods has been the MOST helpful in unmasking embezzlement?

- A. Internal audit
- B. Accidental discovery
- C. Anonymous tip lines
- D. Management review

正解: C

質問 # 200

In order for an organization to mature their data governance processes to ensure compliance, they have created a data classification matrix.

What are the next BEST activities to build on this completed work?

- A. Ensure the data owners agree with the classification of their data and then socialize the matrix with employees handling data.
- B. Ensure the internal legal team approves the data classification matrix then perform a Business Impact Analysis (BIA) to understand the impact of applying the classifications.
- C. Document the handling procedures for each classification of data in the matrix and schedule data handling educational sessions with employees.
- D. Complete a Privacy Impact Assessment (PIA) and use the results to identify improvements to the data classification matrix.

正解: A

質問 # 201

We have observed the inventory system does not handle plastic parts well." What should be added to the problem statement to make it more useful?

- A. Description of who is responsible for the problem
- B. Measurements that help describe the problem
- C. Guidance to which problem-solving tools should be used
- D. Criteria for selecting the improvement team

正解: B

解説:

A problem statement is a concise description of an issue to be addressed or a condition to be improved upon. It identifies the gap between the current state and the desired state of a process or a system. A good problem statement should include measurements that help describe the problem, such as the magnitude, frequency, location, and impact of the problem. These measurements can help quantify the problem and provide a baseline for improvement. The other options are not essential for a problem statement, but rather for the subsequent steps of problem-solving, such as selecting tools, forming teams, and assigning responsibilities. 質問 # 202

Which of the following items does the master scheduler have the authority to change in the master scheduling process?

- A. Customer order quantities
- **B. Product mix**
- C. Engineering change effectivity date
- D. Aggregate volume

正解: B

解説:

The master scheduler has the authority to change the product mix in the master scheduling process. The product mix is the combination and proportion of different products or product families that the company offers to its customers. The master scheduler can adjust the product mix based on the customer demand, the production capacity, the inventory levels, and the strategic objectives of the company. The master scheduler can also use the product mix to balance the demand and supply, to optimize the resource utilization, and to maximize the profitability. The other options are not correct, as they are items that the master scheduler does not have the authority to change in the master scheduling process, but rather inputs or constraints that the master scheduler has to follow or consider:

* Aggregate volume is the total quantity of products or product families that the company plans to produce and deliver in a given period. Aggregate volume is determined by the sales and operations planning (S&OP) process, which involves the senior management and the functional managers of the company. The master scheduler has to align the master production schedule (MPS) with the aggregate volume, and cannot change it without the approval of the S&OP team.

* Engineering change effectivity date is the date when a change in the design or specification of a product or a component becomes effective. Engineering change effectivity date is determined by the engineering department, which is responsible for the product development and innovation. The master scheduler has to incorporate the engineering change effectivity date into the MPS, and cannot change it without the approval of the engineering department.

* Customer order quantities are the amounts of products or product families that the customers order from the company. Customer order quantities are determined by the market demand and the customer preferences. The master scheduler has to satisfy the customer order quantities as much as possible, and cannot change them without the approval of the customers or the sales and marketing department. References:
