Latest AWS-Solutions-Architect-Associate Study Materials - AWS-Solutions-Architect-Associate PDF Download

Are you still worried about your exam? If you do, then trying the AWS-Solutions-Architect-Associate exam torrent of us, we will make it easier for you to pass it successfully. AWS-Solutions-Architect-Associate exam dumps of us are not only have the quality but also have certain quantity, it will be enough for you to deal with your exam. In addition AWS-Solutions-Architect-Associate Online Test engine can record the process of your learning, and you can have a review of what you have learned. AWS-Solutions-Architect-Associate Soft test engine stimulates the real environment of the exam, and you can know what the real exam looks like through this version.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q397-Q402):

NEW QUESTION # 397

At part of budget planning, management wants a report of AWS billed items listed by user. The data will be used to create department budgets. A solution architect needs to determine the most efficient way to obtain this report information. Which solution meets these requirements?

- A. Run a query with Amazon Athena to generate the report.
- B. Modify a cost budget in AWS Budgets to alert with Amazon Simple Email Service (Amazon SES).
- C. Create a report in Cost Explorer and download the report

- D. Access the bill details from the running dashboard and download Via bill.

Answer: C

Explanation:

This option is the most efficient because it uses Cost Explorer, which is a tool that allows you to visualize, understand, and manage your AWS costs and usage over time¹. You can create a report in Cost Explorer that lists AWS billed items by user, using the user name tag as a filter². You can then download the report as a CSV file and use it for budget planning. Option A is less efficient because it uses Amazon Athena, which is a serverless interactive query service that allows you to analyze data in Amazon S3 using standard SQL³. You would need to set up an Athena table that points to your AWS Cost and Usage Report data in S3, and then run a query to generate the report. This would incur additional costs and complexity. Option C is less efficient because it uses the billing dashboard, which provides a high-level summary of your AWS costs and usage.

You can access the bill details from the billing dashboard and download them via bill, but this would not list the billed items by user.

You would need to use tags to group your costs by user name, which would require additional steps. Option D is less efficient because it uses AWS Budgets, which is a tool that allows you to plan your service usage, service costs, and instance reservations.

You can modify a cost budget in AWS Budgets to alert with Amazon Simple Email Service (Amazon SES), but this would not generate a report of AWS billed items by user. This would only notify you when your actual or forecasted costs exceed or are expected to exceed your budgeted amount.

NEW QUESTION # 398

You require the ability to analyze a customer's clickstream data on a website so they can do behavioral analysis. Your customer needs to know what sequence of pages and ads their customer clicked on. This data will be used in real time to modify the page layouts as customers click through the site to increase stickiness and advertising click-through.

Which option meets the requirements for captioning and analyzing this data?

- A. Log clicks in weblogs by URL store to Amazon S3, and then analyze with Elastic MapReduce
- B. Write click events directly to Amazon Redshift and then analyze with SQL
- C. Publish web clicks by session to an Amazon SQS queue then periodically drain these events to Amazon RDS and analyze with SQL.
- **D. Push web clicks by session to Amazon Kinesis and analyze behavior using Kinesis workers**

Answer: D

NEW QUESTION # 399

You have a load balancer configured for VPC, and all back-end Amazon EC2 instances are in service. However, your web browser times out when connecting to the load balancer's DNS name. Which options are probable causes of this behavior? Choose 2 answers

- **A. The Amazon EC2 instances do not have a dynamically allocated private IP address**
- B. The security groups or network ACLs are not properly configured for web traffic.
- C. The VPC does not have a VGW configured.
- D. The load balancer is not configured in a private subnet with a NAT instance.
- **E. The load balancer was not configured to use a public subnet with an Internet gateway configured**

Answer: A,E

NEW QUESTION # 400

Can you encrypt EBS volumes?

- A. Yes, but you must use a third-party API for encrypting data before it's loaded on EBS.
- B. No, you should use a third-party software to perform raw block-level encryption of an EBS volume.
- **C. Yes, you can enable encryption when you create a new EBS volume using the AWS Management Console, API, or CLI.**

- D. Yes, you can encrypt with the special "ebs_encrypt" command through Amazon APIs.

Answer: C

Explanation:

With Amazon EBS encryption, you can now create an encrypted EBS volume and attach it to a supported instance type. Data on the volume, disk I/O, and snapshots created from the volume are then all encrypted. The encryption occurs on the servers that host the EC2 instances, providing encryption of data as it moves between EC2 instances and EBS storage. EBS encryption is based on the industry standard AES-256 cryptographic algorithm.

To get started, simply enable encryption when you create a new EBS volume using the AWS Management Console, API, or CLI. Amazon EBS encryption is available for all the latest EC2 instances in all commercially available AWS regions.

NEW QUESTION # 401

A company uses Amazon S3 for storing a variety of files. A Solutions Architect needs to design a feature that will allow users to instantly restore any deleted files within 30 days of deletion.

Which is the MOST cost-efficient solution?

- A. Create lifecycle policies that move the objects to Amazon Glacier and delete them after 30 days.
- B. Enable versioning and MFA Delete. Using a Lambda function, remove MFA delete from objects more than 30 days old.
- **C. Enable versioning and create a lifecycle policy to remove expired versions after 30 days.**
- D. Enable cross-region replication. Empty the replica bucket every 30 days using an AWS Lambda function.

Answer: C
