UiPath-ASAPv1 Valid Learning Materials, UiPath-ASAPv1 Valid Test Test

The UiPath-ASAPv1 authorized training exams provided by TestPassKing helps you to clear about your strengths and weaknesses before you take the exam. You can get exam scores after each practice test with UiPath-ASAPv1 test engine, which allow you to self-check your knowledge of the key topical concepts. The frequently updated of UiPath-ASAPv1 Latest Torrent can ensure you get the newest and latest study material. You will build confidence to make your actual test a little bit easier with UiPath-ASAPv1 practice vce.

UiPath Automation Solution Architect Professional v1.0 Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32
Which of the following are Services available within UiPath Automation Cloud?

- A. Orchestrator Document Understanding DefaultTenant Test Manager
- B. Process Mining Robot Accounts, Test Manager, Document Understanding
- C. Orchestrator Test Manager Document Understand, Actions
- D. Orchestrator Testing Document Understanding Insights

Answer: D

Explanation:
UiPath Automation Cloud is a cloud-based enterprise automation solution that provides a unified platform for managing all your automation work and resources in one place. It enables you to deploy, operate, and scale your robotic factory in just a few seconds. UiPath Automation Cloud offers various services that you can provision and use within your organization and tenants. Some of the services available within UiPath Automation Cloud are:
Orchestrator: The core service that enables you to monitor, manage, and control your robots, processes, queues, assets, and environments. Orchestrator also provides APIs, webhooks, and integrations for connecting your automation workflows with other systems and applications.
Testing: A service that allows you to create, execute, and analyze automated tests for your applications and processes. Testing also integrates with Test Manager, a web application that helps you manage your testing projects, test cases, test data, and test results.
Document Understanding: A service that enables you to process and analyze documents of various formats and extract key information from them. Document Understanding also integrates with Actions, a web application that allows you to review, validate, and correct the data extracted by the robots.
Insights: A service that provides analytics and dashboards for measuring and improving the performance and impact of your automation projects. Insights also integrates with Orchestrator and allows you to customize and share your reports and visualizations.
Other services that are available within UiPath Automation Cloud include:
Automation Hub: A service that helps you discover, prioritize, and manage your automation ideas and projects. Automation Hub also integrates with Task Capture, a desktop application that allows you to record and document your business processes.
Apps: A service that enables you to create and run custom business applications that connect to your data and automations. Apps also integrates with Data Service, a cloud database that allows you to store and access your data across your apps and processes.
Process Mining: A service that helps you discover, monitor, and improve your business processes based on data from your systems and applications. Process Mining also integrates with Task Mining, a desktop application that allows you to capture and analyze user activities and behaviors.

NEW QUESTION # 33
How does a Solution Design Document (SDD) contribute to the ongoing success of an RPA solution?

- A. It supports maintenance enhancements, and knowledge transfer and provides a reference for future updates and bug fixes.
- B. It restricts collaboration and teamwork to maintain consistency in the design process
- C. It discourages code reusability and standardization, prompting a unique approach for each RPA project.
- D. It limits the scalability and extensibility of the RPA solution to preserve original design intentions.

Answer: A

Explanation:
A Solution Design Document (SDD) is a document that describes the technical design and implementation details of an RPA solution. It includes information such as process flow diagrams, exception handling, logging, security, testing, and deployment. An SDD contributes to the ongoing success of an RPA solution by providing a clear and comprehensive documentation of the solution, which can help with maintenance, enhancements, knowledge transfer, and future updates and bug fixes. An SDD also ensures that the solution follows the best practices and standards of RPA development, and that it meets the business requirements and expectations.

NEW QUESTION # 34
Automating company-wide processes will often require a combination of long-running workflows, ensuring workflow context persistence, calling various services, adding humans in the loop, and asynchronous processing.
What is the role of Orchestration Processes in this context?

- A. To only perform actions in UiPath Orchestrator and to monitor the execution.
- B. To coordinate the Orchestrator Packages that are used by each Robot.
- C. To coordinate these processes using business rules and conditions and to monitor the execution.

- D. To coordinate which Processes are performed by which Robots.

Answer: C

Explanation:
Orchestration Processes in UiPath are designed to manage complex workflows that involve long-running operations, human interactions, and integration with various services. They coordinate different parts of the process according to business logic and monitor the execution to ensure that the workflow progresses smoothly.

NEW QUESTION # 35
Which feature of UiPath Apps allows a user to create forms and components for user interfaces in applications?

- A. App Builder
- B. UiPath Orchestrator
- C. UiPath Studio
- D. Data Service

Answer: A

Explanation:
According to the UiPath documentation1, App Builder is a feature of UiPath Apps that allows a user to create forms and components for user interfaces in applications. App Builder is a low-code app development tool that enables users to design and publish custom apps using drag-and-drop controls, data bindings, conditional logic, and automation workflows. App Builder also provides a preview mode to test the app functionality and appearance before publishing. Users can create apps for various form factors and devices, such as desktop, mobile, web, or sidebar. App Builder also integrates with UiPath Studio, UiPath Orchestrator, and Data Service to leverage the power of automation and data management in the apps. NEW QUESTION # 36
What functionality does the Package Explorer offer?

- A. Explore the graphical representation of any .xml file without having access to the variables, arguments, and imports that are part of any package version.
- B. Explore the graphical representation of nay .xml file as well as the variables, arguments, and imports that are part of any package version.
- C. Explorer the graphical representation of only the entry xml file as well as the variables, arguments, and imports that are part of the latest package version.
- D. Explore the graphical representation of only the entry xml file without having access to the variable, arguments, and imports that are part of any package version.

Answer: B

Explanation:
Package Explorer is a feature that enables you to view the contents of any package version uploaded to Orchestrator. You can access it from the Packages page, by clicking the Explore button next to the package name. Package Explorer displays a graphical representation of the entry .xml file of the package, as well as the variables, arguments, and imports that are part of it. You can also view the properties of each activity, such as selectors, text, or output variables. Package Explorer can help you troubleshoot errors, compare different versions of a package, or inspect the logic of a package without opening it in Studio.
