# 1Z0-1072-25 Latest Test Materials, 1Z0-1072-25 Top Dumps

P.S. Free 2026 Oracle 1Z0-1072-25 dumps are available on Google Drive shared by Test4Engine: https://drive.google.com/open?id=1GbpC-X4wrjMYTV7MD-cm7Sipj2QvDAkY

Our company has become the front-runner of this career and help exam candidates around the world win in valuable time. With years of experience dealing with 1Z0-1072-25 exam, they have thorough grasp of knowledge which appears clearly in our 1Z0-1072-25 Exam Questions. All 1Z0-1072-25 study materials you should know are written in them with three versions to choose from: the PDF, Software and APP online versions.

The Oracle 1Z0-1072-25 certification exam offers a great opportunity to advance your career. With the Oracle Cloud Infrastructure 2025 Architect Associate certification exam beginners and experienced professionals can demonstrate their expertise and knowledge. After passing the Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) exam you can stand out in a crowded job market. The Oracle Cloud Infrastructure 2025 Architect Associate (1Z0-1072-25) certification exam shows that you have taken the time and effort to learn the necessary skills and have met the standards in the market.

Actual Oracle 1Z0-1072-25 PDF Question For Quick Success

In fact, purchasing our 1Z0-1072-25 Actual Test means you have been half success. Good decision is of great significance if you want to pass the 1Z0-1072-25 exam for the first time. That is to say, if you decide to choose our study materials, you will pass your exam at your first attempt. Not only that, we also provide all candidates with free demo to check our product, it is believed that our free demo will completely conquer you after trying.

Oracle 1Z0-1072-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPN • FastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.
Topic 2	• Compute: This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.
Topic 3	• Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying Block • File • Object Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.
Topic 4	• Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources

Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q46-Q51):

NEW QUESTION # 46
Which image option allows you to create identical instances with minimal effort?

- A. Use Oracle-provided images
- B. Create a custom image
- C. Bring your own image
- D. Select an image from the OCI Marketplace

Answer: B

Explanation:
When you need to create identical instances with minimal effort, creating a custom image is the best option.
Custom Images: A custom image captures the exact configuration of an instance, including the OS, software, configurations, and data. By using a custom image, you can easily replicate the same setup across multiple instances, ensuring consistency and reducing the need for manual configuration each time.
Other Options:
Bring Your Own Image: This allows you to import your custom OS image into OCI, but it's more suited for cases where you are migrating from another environment.
Select an Image from the OCI Marketplace: This provides pre-configured images from Oracle or third parties, but they may require additional setup to match your specific requirements.
Use Oracle-Provided Images: These are basic images provided by Oracle, which may not include the specific customizations you need.
Relevant OCI Documentation:
Custom Images Overview
This resource explains how to create and use custom images for quickly deploying identical instances.

NEW QUESTION # 47
Why was SSH still possible after port 22 was removed from the Security Lists?

- A. The VCN where that compute instance resides still has an Internet Gateway.

- B. The VCN where that compute instance resides still has a route rule.
- C. The VNIC of that compute instance is attached to a Network Security Group (NSG).
- D. The VNIC of that compute instance is attached to a Cluster Network.

Answer: C

Explanation:
Even after removing port 22 from the Security Lists, SSH was still possible because the Virtual Network Interface Card (VNIC) of the compute instance is attached to a Network Security Group (NSG).
NSGs: NSGs provide a more flexible and granular way to manage security rules compared to Security Lists. They allow you to apply security rules directly to VNICs associated with resources such as compute instances. If an NSG allows traffic on port 22, SSH will still be possible, regardless of the Security List settings.

Oracle Cloud Infrastructure Documentation: Security Lists and Network Security Groups

NEW QUESTION # 48
What are the two types of capture filters that can be created for network monitoring?

- A. Flow log capture filters and VTAP capture filters
- B. VTAP capture filters and network capture filters
- C. Flow control capture filters and traffic capture filters
- D. Flow log capture filters and packet capture filters

Answer: A

Explanation:
In Oracle Cloud Infrastructure (OCI), there are two primary types of capture filters used for network monitoring:
Flow Log Capture Filters: These filters are used to capture and log network flow information (e.g., source and destination IP addresses, ports, protocols). Flow logs provide insights into the traffic patterns within your VCN.
VTAP Capture Filters: Virtual Test Access Point (VTAP) capture filters allow you to capture and inspect traffic from specific network interfaces or subnets without affecting the flow of traffic. This is particularly useful for deep packet inspection and monitoring purposes.

Oracle Cloud Infrastructure Documentation: Flow Logs
Oracle Cloud Infrastructure Documentation: VTAP

NEW QUESTION # 49
Which is NOT a necessary step to complete this setup for instance principals?

- A. Generate Auth Tokens to enable instances in the dynamic group to authenticate with APIs.
- B. Deploy the application and the SDK to all the instances that belong to the dynamic group.
- C. Create a dynamic group with matching rules to specify which instances can make API calls against services.
- D. Create a policy granting permissions to the dynamic group to access services in your compartment or tenancy.

Answer: A

Explanation:
Instance principals in OCI allow compute instances to directly make API calls against OCI services without requiring a user account.
To set up instance principals, the following steps are necessary:
A . Deploy the application and SDK: The application running on the instances must use the OCI SDK or CLI to make API calls.
B . Create a dynamic group: Define a dynamic group with matching rules to identify which instances can use the API permissions.
C . Create a policy: Write an IAM policy that grants the dynamic group the necessary permissions to access services.
Option D is NOT necessary because instances in a dynamic group use instance principals to authenticate and do not require Auth Tokens, which are used for user authentication with APIs.
Reference:
Oracle Cloud Infrastructure Documentation: Using Instance Principals

NEW QUESTION # 50

Which statement is NOT correct regarding the Oracle Cloud Infrastructure (OCI) File System snapshots?

- A. Snapshots are a consistent, point-in-time view of your file systems.
- B. Snapshots are accessible under the root directory of the file system at .snapshot/name.
- C. Before you can clone a file system, at least one snapshot must exist for the file system.
- D. Even if nothing has changed within the file system since the last snapshot was taken, a new snapshot consumes more storage.

Answer: D

Explanation:
In OCI File Storage, snapshots are point-in-time, read-only copies of a file system that do not immediately consume additional storage beyond the space needed to track changes.
Incorrect Statement: The statement that a new snapshot consumes more storage even if nothing has changed is incorrect. Snapshots are space-efficient; they only consume additional storage as changes are made to the file system after the snapshot is taken. If no changes are made between snapshots, the storage consumption remains minimal.
Correct Statements:
B . Before cloning a file system, at least one snapshot must exist, as the clone operation relies on this snapshot to create a copy.
C . Snapshots are accessible under the .snapshot directory, allowing users to view and restore files from specific snapshots.
D . Snapshots provide a consistent, point-in-time view of the file system, ensuring data integrity.
