Therefore, for your convenience, more choices are provided for you, we are pleased to suggest you to choose our CLF-C02 Exam Question for your exam. So with our CLF-C02 guide torrents, you are able to pass the exam more easily in the most efficient and productive way and learn how to study with dedication and enthusiasm, which can be a valuable asset in your whole life. It must be your best tool to pass your exam and achieve your target.

### Amazon AWS Certified Cloud Practitioner Sample Questions (Q487-Q492):

#### NEW QUESTION # 487

What can a cloud practitioner use to retrieve AWS security and compliance documents and submit them as evidence to an auditor or regulator?

- A. AWS Artifact
- B. AWS Systems Manager
- C. AWS Certificate Manager
- D. Amazon Inspector

#### Answer: A

Explanation:

AWS Artifact is a service that provides on-demand access to AWS security and compliance documents, such as AWS ISO certifications, Payment Card Industry (PCI) reports, and Service Organization Control (SOC) reports. You can download these documents and submit them as evidence to your auditors or regulators to demonstrate the security and compliance of the AWS infrastructure and services that you use. AWS Artifact also allows you to review, accept, and manage AWS agreements, such as the Business Associate Addendum (BAA) for customers who are subject to the Health Insurance Portability and Accountability Act (HIPAA). References: AWS Artifact, What is AWS Artifact?

#### NEW QUESTION # 488

A company wants to launch its web application in a second AWS Region. The company needs to determine which services must be regionally configured for this launch.

Which AWS services can be configured at the Region level? (Select TWO.)

- A. Amazon Route 53
- B. Amazon CloudFront
- C. Amazon EC2
- D. AWS WAF
- E. Amazon DynamoDB

#### Answer: A,D

Explanation:

Explanation

Amazon Route 53 and AWS WAF are AWS services that can be configured at the Region level. Amazon Route 53 is a highly available and scalable cloud Domain Name System (DNS) web service that lets you register domain names, route traffic to resources, and check the health of your resources. AWS WAF is a web application firewall that helps protect your web applications or APIs against common web exploits that may affect availability, compromise security, or consume excessive resources. Amazon EC2, Amazon CloudFront, and Amazon DynamoDB are AWS services that can be configured at the global level or the Availability Zone level.

#### NEW QUESTION # 489

Which aspect of security is the customer's responsibility, according to the AWS shared responsibility model?

- A. Service and communications protection or zone security
- B. Physical and environmental controls
- **C. Patch and configuration management**
- D. Awareness and training

**Answer: C**

Explanation:

Explanation

According to the AWS shared responsibility model, AWS is responsible for the security of the cloud, while the customer is responsible for the security in the cloud. This means that AWS provides the physical and environmental controls, the service and communications protection, and the awareness and training for its employees, while the customer provides the patch and configuration management, the identity and access management, the data encryption, and the firewall configuration for its resources<sup>3</sup>.

#### NEW QUESTION # 490

Which AWS compute service gives users the ability to securely and reliably run containers at scale?

- A. Amazon Aurora
- B. Amazon Athena
- C. Amazon Polly
- **D. Amazon Elastic Container Service (Amazon ECS)**

**Answer: D**

Explanation:

Amazon Elastic Container Service (Amazon ECS) is a highly scalable, fast container management service that allows you to run, stop, and manage Docker containers on a cluster of Amazon EC2 instances or a serverless environment powered by AWS Fargate. It provides secure, reliable, and scalable operations for containers, allowing users to deploy containers in a highly secure and reliable manner. Amazon Aurora is a relational database service, Amazon Athena is an interactive query service, and Amazon Polly is a text-to-speech service. Therefore, the correct answer is Amazon ECS. References:

\* AWS Documentation on Amazon ECS

#### NEW QUESTION # 491

An IT engineer needs to access AWS services from an on-premises application.

Which credentials or keys does the application need for authentication?

- A. AWS account user name and password
- B. AWS Key Management Service (AWS KMS) keys
- **C. IAM access key and secret**
- D. Amazon EC2 key pairs

**Answer: C**

Explanation:

IAM access keys are long-term credentials that consist of an access key ID and a secret access key. You use access keys to sign programmatic requests that you make to AWS. If you need to access AWS services from an on-premises application, you can use IAM access keys to authenticate your requests. AWS account user name and password are used to sign in to the AWS Management Console. Amazon EC2 key pairs are used to connect to your EC2 instances using SSH. AWS Key Management

Service (AWS KMS) keys are used to encrypt and decrypt your data using the AWS Encryption SDK or the AWS CLI.

## NEW QUESTION # 492

.....

Even some one can job-hop to this international company. Opportunities are reserved for those who are prepared. Only if you pass the exam can you get a better promotion. And if you want to pass it more efficiently, we must be the best partner for you.
