## IBM watsonx Generative AI Engineer - Associate Sample Questions (Q18-Q23):

### NEW QUESTION # 18

You are working on a project that involves deploying a series of prompt templates for a large language model on the IBM Watsonx

platform. The team has requested a system that supports prompt versioning so that updates to the prompts can be tracked and tested over time.

Which of the following is the most important consideration when planning prompt versioning for deployment?

- A. Version control should focus exclusively on the syntactical structure of the prompts, as changes to prompt content rarely impact the model's performance.
- B. Prompts should be stored in a proprietary IBM format, as other formats are not compatible with the Watsonx platform when using versioning.
- C. Each version of the prompt must have a unique identifier that can be referenced during model inference, to avoid conflicting results from different prompt versions.
- D. The versioning system should automatically downgrade to the previous prompt version if the model returns a confidence score below a certain threshold during inference.

**Answer: C**

#### **NEW QUESTION # 19**

You are optimizing a generative AI model using prompts. You are tasked with choosing between a hard prompt and a soft prompt for generating a technical report.

Which option best describes a soft prompt in this context?

- A. A prompt that restricts the model's output using hard-coded rules to ensure specific behavior during generation.
- B. A prompt that influences the model by embedding learned vectors into the input, modifying the generation behavior indirectly.
- C. A prompt that directly instructs the model with domain-specific keywords and structured language to steer the model's output.
- D. A manually written prompt that is optimized using a grid search of the best keywords and patterns for the task.

**Answer: B**

#### **NEW QUESTION # 20**

You are working with IBM Watsonx to develop a generative AI solution that automatically generates product descriptions for an e-commerce website. The descriptions need to be concise, factual, and include important product features like size, color, and material.

Which prompt design approach would best ensure the output meets these requirements?

- A. "Provide a product description for the following items, ensuring it is factual, concise, and includes specific details such as size, color, and material."
- B. "Generate a creative and imaginative product description for the items listed below."
- C. "Write a summary that provides information on each product, making the content engaging, humorous, and memorable."
- D. "Generate a product description that highlights the unique aspects of the product and uses emotional language to engage the reader."

**Answer: A**

#### **NEW QUESTION # 21**

When leveraging existing data for fine-tuning an LLM in IBM Watsonx, you want to optimize the model for a highly specialized domain. You also want to generate additional synthetic data to augment your dataset.

Which of the following approaches would best help you achieve your goal?

- A. Manually crafting complex datasets by sampling individual instances from unrelated domains
- B. Relying exclusively on pre-trained general models without making domain-specific modifications
- C. Using unsupervised learning on your existing dataset without adding synthetic data
- D. Using the Watsonx UI to generate synthetic data that mirrors your existing dataset, filling any data gaps

**Answer: D**

## NEW QUESTION # 22

You are preparing a dataset to fine-tune a language model for sentiment analysis. The dataset consists of user reviews with a mix of neutral, positive, and negative sentiments.

Which of the following strategies will best ensure that the model learns balanced sentiment detection?

- A. Focus only on neutral and negative examples to challenge the model
- B. Ensure an equal distribution of positive, negative, and neutral sentiment examples
- C. Convert neutral examples into either positive or negative to simplify the task
- D. Increase the number of positive sentiment examples in the dataset

**Answer: B**
