

# Free Exam4Tests IBM C1000-189 Questions Updates and Demo

IBM

C1000-189 Exam

IBM Instana Observability v1.0.277 Administrator - Professional

Exam Latest Version: 6.0

## DEMO Version

### Full Version Features:

- 90 Days Free Updates
- 30 Days Money Back Guarantee
- Instant Download Once Purchased
- 24 Hours Live Chat Support

Full version is available at link below with affordable price.

2026 Latest Exam4Tests C1000-189 PDF Dumps and C1000-189 Exam Engine Free Share: <https://drive.google.com/open?id=1UbDYE7Zhhwp3LGf7upQg9ohDiOOJ8hjK>

In order to cater to different kinds of needs of candidates, we offer three versions for C1000-189 training materials for you to select. Each version has its own advantage, and you can choose the most suitable one in accordance with your own needs. C1000-189 PDF version is printable, and you can print it into paper if you like. C1000-189 Soft test engine can stimulate the real exam environment, so that you can build up your confidence for the exam. C1000-189 Online test engine is convenient and easy to learn, and it supports offline proactive. You can also have a review of what you have learned through C1000-189 Online test engine.

Contrary to most of the C1000-189 exam preparatory material available online, Exam4Tests's dumps can be obtained on an affordable price yet their quality and benefits beat all similar products of our competitors. They will prove the best alternative of your time and money. What's more, our customers' care is available 24/7 for all visitors on our pages. You can put all your queries and get a quick and efficient response as well as advice of our experts on C1000-189 Certification tests you want to take. Our professional online staff will attend you on priority.

## New C1000-189 Test & Reliable C1000-189 Exam Topics

In this cut-throat competitive world of IBM, the IBM C1000-189 certification is the most desired one. But what creates an obstacle in the way of the aspirants of the IBM C1000-189 certificate is their failure to find up-to-date, unique, and reliable IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) practice material to succeed in passing the IBM C1000-189

Certification Exam. If you are one of such frustrated candidates, don't get panic. Exam4Tests declares its services in providing the real C1000-189 PDF Questions. It ensures that you would qualify for the IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) certification exam on the maiden strive with brilliant grades.

## IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q62-Q67):

### NEW QUESTION # 62

Which feature helps automating incident management?

- A. Hotspot visualization
- B. Static code quality checks
- C. Log visualization
- D. Action framework

**Answer: D**

Explanation:

Automated incident management in Instana is powered by the "Action Framework." The IBM documentation reads: "Instana's Action Framework enables automated response and remediation to detected incidents via webhooks, script execution, or integrations with ticketing systems." The framework can trigger custom scripts, communicate with ITSM solutions, or directly notify DevOps/SRE teams when a health signature or smart alert activates. This helps shorten resolution times and supports continuous reliability objectives. Other visualizations or static checks, while useful (A, C, D), do not automate response—they only improve observability or code hygiene. The Action Framework is essential to operationalize incident response workflows across modern, distributed environments, as it closes the loop between detection and mitigation.

### NEW QUESTION # 63

Which type of data does Instana use to correlate application performance with infrastructure metrics?

- A. Requests, responses, errors, and latency
- B. Logs, traces, tags, and metrics
- C. Correlated logs, number of events, host type, and recent changes
- D. Host resources, host id, application resources, and application id

**Answer: B**

Explanation:

Instana's contextual correlation engine combines different data types to build a unified observability model. IBM documentation states: "To correlate application performance with infrastructure metrics, Instana relies on logs, traces, tags, and time series metrics." Traces map the end-to-end request journey, metrics provide numerical measures of both system and app health, tags label resources for logical grouping and discovery, and logs offer deep diagnostic information. By analyzing traces and metrics together, Instana surfaces where latency, errors or bottlenecks in the application link directly to resource consumption or system events captured at the infrastructure level. Tags facilitate mapping services to containers, VMs, or Kubernetes objects. Raw counts (B, C) and raw transactional data (D) are part of the analysis pipeline but do not provide the required level of linkage for successful application-to-infrastructure mapping - only the union of traces, metrics, tags, and logs achieves this dimensionality.

### NEW QUESTION # 64

Which logging framework is used by Instana agents?

- A. Loggly
- B. Log4j2
- C. Serilog
- D. JSONLog

**Answer: B**

Explanation:

IBM Instana Observability agents use Log4j2 as their primary logging framework for system activity, sensor status, and diagnostic output. The documentation confirms: "The default logging framework for Instana agents is Apache Log4j2, providing structured log

output, multi-level verbosity, and integration with most enterprise log aggregation environments." Log4j2 is a standard for Java-based environments, supporting dynamic log rotation, filtering, and formatting. Instana agent log files follow Log4j2 conventions, enabling easy parsing by SIEM tools and adapters. Serilog (A) is a .NET framework, not used by Instana agents. JSNLog (C) is for JavaScript applications, while Loggly (D) is a SaaS log analytics platform. Log4j2's mature design lets administrators tune performance, verbosity, and log destinations in rich deployment scenarios, directly aligning with best practices in Instana's monitoring ecosystem. This was reconfirmed in agent reference guides and environment setup sections.

#### NEW QUESTION # 65

Which statement best describes BeeInstana?

- A. A Kubernetes operator that requires high-performing data stores and a distributed data store cluster.
- B. An operator that can be used to install Instana on Kubernetes
- C. An operator that can be used only on self-hosted deployments that have data stores installed
- D. It is a metric database used to perform complex metric queries

**Answer: A**

Explanation:

BeeInstana is identified in Instana's documentation as the core Kubernetes operator driving distributed installation and management of Instana components. The documentation defines: "BeeInstana is a Kubernetes operator that requires robust, high-performing distributed data stores and manages Instana deployment complexity, resource allocation, and scaling within large clusters." By leveraging Kubernetes-native constructs, BeeInstana orchestrates Instana backend, UI, sensors, and streaming components-ensuring reliable, scalable deployments for enterprise settings. The operator orchestrates failover, recovery, and persistent storage management, supporting self-hosted and hybrid installations. While it is associated with metric data handling, its main role is orchestration and operational management based on distributed database infrastructures. Simple operator installation (A, D) does not capture its full role, and describing BeeInstana as only a metric database (B) misrepresents its architectural function in Instana's platform lifecycle.

#### NEW QUESTION # 66

At which level can AWS agent polling intervals for CloudWatch API be configured?

- A. Service
- B. Account
- C. Resource group
- D. Region

**Answer: D**

Explanation:

AWS monitoring through Instana involves integration with the CloudWatch API to retrieve platform and service metrics. The official IBM Instana Observability documentation affirms that polling intervals for CloudWatch can be set at the Region level. This means an administrator configures how frequently Instana's agent queries CloudWatch within each specified region independently. This level of granularity provides flexibility: for example, mission-critical regions may be monitored more frequently, while others are polled less often to reduce API costs or remain within AWS rate limits. The documentation specifies: "Instana Agents for AWS can be configured with a polling interval for CloudWatch that is set per Region to customize granularity and resource consumption." Polling cannot be set at the account, resource group, or individual service level in default configuration. Instana's region-based polling helps balance data accuracy and overhead, especially in global or multi-region deployments. If needed, changes are applied through YAML configuration or UI during AWS agent integration setup.

#### NEW QUESTION # 67

.....

They are using outdated materials resulting in failure and loss of money and time. So to solve all these problems, Exam4Tests offers actual C1000-189 Questions to help candidates overcome all the obstacles and difficulties they face during C1000-189 examination preparation. With vast experience in this field, Exam4Tests always comes forward to provide its valued customers with authentic, actual, and genuine C1000-189 exam dumps at an affordable cost.
