Books / Training	Virtual Instructor-Led Training In-Person Training & Conferences Customized, On-Site Corporate Training CISM Planning Guide
Exam Code	CISM
Passing Score	450/800

Duration	240 mins
Exam Price ISACA Nonmember	\$760 (USD)

ISACA Certified Information Security Manager Sample Questions (Q827-Q832):

NEW QUESTION # 827

Which of the following backup methods requires the MOST time to restore data for an application?

- A. Disk mirroring
- B. Full backup
- C. Incremental
- D. Differential

Answer: C

NEW QUESTION # 828

What is the MOST cost-effective method of identifying new vendor vulnerabilities?

- A. honey pots located in the DMZ
- B. Periodic vulnerability assessments performed by consultants
- C. Intrusion prevention software
- D. External vulnerability reporting sources

Answer: D

Explanation:

External vulnerability sources are going to be the most cost-effective method of identifying these vulnerabilities. The cost involved in choices B and C would be much higher, especially if performed at regular intervals. Honeypots would not identify all vendor vulnerabilities. In addition, honeypots located in the DMZ can create a security risk if the production network is not well protected from traffic from compromised honey pots.

NEW QUESTION # 829

An organization finds it necessary to quickly shift to a work-from-home model with an increased need for remote access security. Which of the following should be given immediate focus?

- A. Enabling network-level authentication
- B. Strengthening endpoint security
- C. Moving to a zero trust access model
- D. Enhancing cyber response capability

Answer: B

Explanation:

Strengthening endpoint security is the most immediate focus when shifting to a work-from-home model with an increased need for remote access security, as this reduces the risk of unauthorized access, data leakage, malware infection, and other threats that may compromise the confidentiality, integrity, and availability of the organization's information assets. Moving to a zero trust access model, enabling network-level authentication, and enhancing cyber response capability are also important, but not as urgent as strengthening endpoint security, as they require more time, resources, and planning to implement effectively. NEW QUESTION # 830

What would a security manager PRIMARILY utilize when proposing the implementation of a security solution?

- A. Risk assessment report
- B. Technical evaluation report
- **C. Business case**
- D. Budgetary requirements

Answer: C

Explanation:

Section: INFORMATION SECURITY GOVERNANCE

Explanation:

The information security manager needs to prioritize the controls based on risk management and the requirements of the organization. The information security manager must look at the costs of the various controls and compare them against the benefit the organization will receive from the security solution. The information security manager needs to have knowledge of the development of business cases to illustrate the costs and benefits of the various controls. All other choices are supplemental.

NEW QUESTION # 831

Which of the following is the BEST method to provide a new user with their initial password for e-mail system access?

- A. Require no password but force the user to set their own in 10 days
- B. Set initial password equal to the user ID with expiration in 30 days
- C. Interoffice a system-generated complex password with 30 days expiration
- **D. Give a dummy password over the telephone set for immediate expiration**

Answer: D

Explanation:

Section: INFORMATION SECURITY PROGRAM DEVELOPMENT

Explanation/Reference:

Explanation:

Documenting the password on paper is not the best method even if sent through interoffice mail if the password is complex and difficult to memorize, the user will likely keep the printed password and this creates a security concern. A dummy (temporary) password that will need to be changed upon first logon is the best method because it is reset immediately and replaced with the user's choice of password, which will make it easier for the user to remember. If it is given to the wrong person, the legitimate user will likely notify security if still unable to access the system, so the security risk is low. Setting an account with no initial password is a security concern even if it is just for a few days. Choice D provides the greatest security threat because user IDs are typically known by both users and security staff, thus compromising access for up to 30 days.
