At the same time, CIS-Discovery Exam Torrent will also help you count the type of the wrong question,

so that you will be more targeted in the later exercises and help you achieve a real improvement. CIS-Discovery exam guide will be the most professional and dedicated tutor you have ever met, you can download and use it with complete confidence.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q14-Q19):

NEW QUESTION # 14

Which of the following does the ECC Queue provide? (Choose two.)

- A. A connected flow of probe and sensor activity.
- B. The process responsible for defining, analyzing, planning, measuring, and improving all aspects of the availability of IT services.
- C. Login credentials for the MID Server host.
- D. The actual XML payload that is sent to or from an instance.

Answer: A,D

Explanation:

The ECC Queue is the normal connection point between an instance and other systems that integrate with ServiceNow, such as MID Servers¹. The ECC Queue displays input and output messages from and to MID Servers². The actual XML payload that is sent to or from an instance is stored in the ECC Queue³. The ECC Queue also provides a connected flow of probe and sensor activity, as probes are sent from the instance to the MID Server, and sensors are sent from the MID Server to the instance².

:

1: ServiceNow Discovery Overview

2: ECC Queue Processing and Debugging, with "Discovery - Sensors" used as an example

3: Manage ECC Queue content for a MID Server

NEW QUESTION # 15

Given a custom column named `u_custom_column` on table `cmdb_ci_linux_server`, which variable syntax should be used to populate the column in a horizontal discovery pattern using the Set Parameter Value operation?

- A. `$cmdb_ci_linux_server[*].u_custom_column`
- B. `$user_var_custom_column`
- C. `$u_custom_column[1].cmdb_ci_linux_server`
- D. `$cmdb_ci_linux_server.u_custom_column.INSERT`

Answer: D

Explanation:

The correct variable syntax to populate a custom column in a horizontal discovery pattern is

`$cmdb_ci_linux_server.u_custom_column.INSERT`. This syntax indicates that the value of the custom column will be inserted into the `cmdb_ci_linux_server` table for the current CI. The other options are either invalid or incorrect syntaxes for this operation^{1,2}.

References:

* Set Parameter Value operation

* Pattern variables

NEW QUESTION # 16

Which of the following fields are editable from a Merge Table pattern operation?

Choose 3 answers

- A. Primary Table
- B. Target Table
- C. First Table
- D. Second Table

Answer: B,C,D

Explanation:

In a Merge Table pattern operation within ServiceNow Discovery, the editable fields typically include the Target Table, Second

Table, and First Table. These fields are configurable and allow users to specify the tables involved in the merge operation. The Target Table is where the merged data will be stored, while the First and Second Tables are the source tables whose data is being merged. The Primary Table is not typically an editable field in this context. References = ServiceNow Discovery documentation, particularly the sections discussing pattern design and operations, including Merge Table operations within Discovery Patterns.

NEW QUESTION # 17

Which of the following related lists can assist with troubleshooting discovery from a discovery status?

Choose 3 answers

- A. ECC Queue
- B. Discovery Log
- C. Running Processes
- D. Devices

Answer: A,B,D

Explanation:

To troubleshoot discovery issues from a discovery status in ServiceNow, the following related lists can be particularly useful:

* Discovery Log - Provides detailed logs of the discovery process, helping to identify errors or issues encountered during discovery.

* ECC Queue - Shows the messages and data passed between the ServiceNow instance and the MID Server, offering insights into the communication and data exchange during discovery.

* Devices - Lists the devices discovered in the process, allowing for a direct view of the results and any potential issues with specific devices.

The "Running Processes" list is not typically used for troubleshooting discovery processes as it relates more to the operational aspects of the server or device rather than the discovery process itself. References = ServiceNow Discovery documentation, specifically the sections on Discovery troubleshooting and analysis, and the use of related lists for monitoring and troubleshooting purposes.

NEW QUESTION # 18

_____ are global variables for steps in horizontal discovery patterns.

Response:

- A. Baseline and system
- B. Computer_system and baseline
- C. System and process
- D. Process and computer_system

Answer: D

NEW QUESTION # 19
