Reliable D-AV-DY-23 Test Guide - Latest D-AV-DY-23 Exam Questions Vce

The Dell Avamar Deploy 2023 (D-AV-DY-23) PDF dumps format can be accessed from any smart device such as laptops, tablets, and smartphones. VCEEngine regularly updates the D-AV-DY-23 PDF Questions to reflect the latest EMC D-AV-DY-23 exam content. All test questions in the D-AV-DY-23 exam PDF format are real and latest.

EMC D-AV-DY-23 Exam Syllabus Topics:

Topic	Details
Topic 1	• Avamar Implementation: Virtual Edition deployment: installation prerequisites, procedures, best practices, licensing, and upgrades.
Topic 2	• Avamar Administration: Comprehensive management: system monitoring, Web UI navigation, backup • restore operations, replication, Cloud Tier, Data Domain • NDMP integration, daily maintenance, and Fitness Analyzer usage.
Topic 3	• Avamar Concepts: Core knowledge: use cases, features, architecture, components, and administrative principles.

Topic 4	• Avamar Installation and Maintenance: Data Store hardware: installation, node management (replacement • addition), and network connectivity.

Latest D-AV-DY-23 Exam Questions Vce - Valid D-AV-DY-23 Test Labs

Many people are afraid of walking out of their comfortable zones. So it is difficult for them to try new things. But you will never grow up if you reject new attempt. Now, our D-AV-DY-23 study quiz can help you have a positive change. It is important for you to keep a positive mind. Our D-AV-DY-23 Practice Guide can become your new attempt. And our D-AV-DY-23 exam braindumps will bring out the most effective rewards to you as long as you study with them.

EMC Dell Avamar Deploy 2023 Sample Questions (Q143-Q148):

NEW QUESTION # 143
What is the recommended replication method for moving all data and clients from a single node to a multi- node Dell Avamar server?

- A. Selective replication
- B. Root-to-REPLICATE replication
- C. MCS/SQL Dump Export/Import
- D. Root-to-root replication

Answer: D

NEW QUESTION # 144
A storage node in a multi-node Dell Avamar server has failed, and a full node replacement is being performed.
What is used to reconstruct the data on the replacement node?

- A. Replication
- B. Checkpoint
- C. RAID
- D. RAIN

Answer: D

Explanation:
Explanation/Reference:

Reliability and availability: RAIN, replication, and checkpoints

When traditional backup solutions fail, enterprises are exposed to windows of potential data loss. Avamar employs patented redundant array of independent nodes (RAIN) technology in order to provide high availability across the nodes in an Avamar server grid. Avamar can continue to provide reliable data protection and access, even if a server node fails or becomes unavailable, since data stored on any node can be reconstructed from the other nodes.

In addition to protecting enterprise systems, Avamar also protects itself with twice daily, internal checkpoints — consistent snapshots of the entire Avamar system that can be verified for integrity. If an integrity check fails due to an inconsistency, and the inconsistency cannot be fixed, the system can be quickly rolled back to a prior checkpoint. RAID protects data stored on disk and for further system protection flexibility, checkpoints can also be stored on a Data Domain System for implementations leveraging this integrated solution.
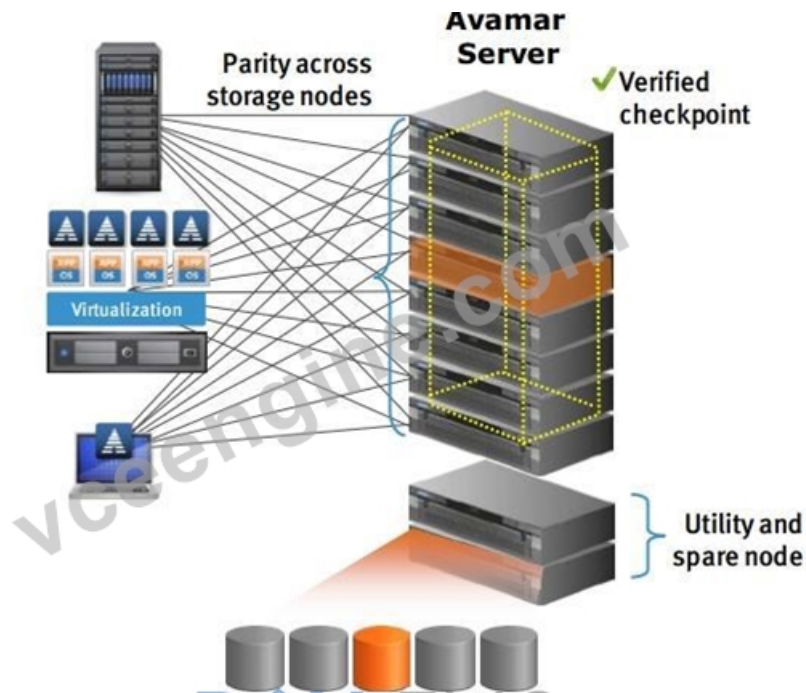

Figure 11. Avamar RAIN, RAID, and daily checkpoints for high availabilit

NEW QUESTION # 145

In Dell Avamar, what is the default setting for the checkpoint retention policy?

- A. Retain the last two checkpoints and the last validated checkpoint
- B. Retain the last five checkpoints and three validated checkpoints
- C. Retain the last two checkpoints and the last two validated checkpoints
- D. Retain all checkpoints for the last three days

Answer: A

Explanation:
Explanation/Reference:

Checkpoints are taken twice daily and validated once daily during t
Avamar administrators can also create and validate checkpoints at
checkpoints that are not needed in order to reclaim additional serv

NEW QUESTION # 146

A company is using an Dell Avamar multi-node server with 2 TB storage nodes. The company wants to add 3 TB of Avamar storage to the multi-node server.
How can this be achieved?

- A. Add one 3.3 TB storage node
- B. Add two 2 TB AVEs
- C. Add two 2 TB storage nodes
- D. Add three 1 TB storage nodes

Answer: C

Explanation:
Explanation/Reference:

Avamar Server Specifications

- The Avamar server runs on SLES
  - RHEL is supported for upgrades from 5.x
- Supports multiple processors
- Storage node capacities:
  - Gen4S nodes: 2.0TB, 3.9TB, 7.8TB
  - Gen4 nodes: 1.3TB, 2.6TB, 3.9TB, 7.8TB
  - AVE: 0.5TB, 1.0TB, 2.0TB, 4.0TB
- Two server editions:
  - Hardware appliance: Avamar Data Store
  - Virtual appliance: Avamar Virtual Edition (AVE)

Table 2 Maximum change rates AVE supports for file server and mixed environments

Configuration	File server data	Mixed data
0.5 TB AVE	Less than 2 GB per day	Less than 5 GB per day
1 TB AVE	Less than 4 GB per day	Less than 10 GB per day
2 TB AVE	Less than 8 GB per day	Less than 20 GB per day
4 TB AVE	Less that 20 GB per day	Less that 20 GB per day

NEW QUESTION # 147

A customer has a remote client with over 4 TB of file data that needs to be backed up to a local Avamar server.
What is a best practice to perform the initialization?

- A. Wait for any other backups to complete, then start the backup of the remote site
- B. Start with a subset of data and gradually keep increasing the data per backup
- C. Start the initial backup of remote client across the LAN
- D. Start the initial backup and allow overtime on the server

Answer: B

Explanation:
Explanation/Reference:
Best Practices for Adding Large Filesystem Clients
-Ensure the file cache is sized properly
-Work with support / account teams to investigate using cache prefixing for clients with many millions of files
-For initial backups:
On low capacity grids, use overtime to allow the backup to complete
On higher capacity grids, allow the client to time out daily and rely on partial backups For clients that will not complete within 7
days, start with a small dataset and gradually add more files and directories to avoid issues with parials backups expiring before the

initial backup completes

-For incremental backups:

Typical backup performance is about 1 million files per hour

Generally the client disk performance is the bottleneck but be sure to confirm the bottleneck before making any performance tweaks

NEW QUESTION # 148
