

# Question Data-Architect Explanations & Data-Architect Test Labs

**Answer: A and C**

**Explanation:**

Using indexed fields improves query performance, and applying bounded filters ensures that only the relevant data is fetched, reducing the amount of data processed by the report. This approach will help in optimizing the performance of the report for a large number of Accounts.

Using unbounded date ranges allows for better performance by reducing the scope of the data that needs to be queried. In this case, the report should show Accounts opened in the past year, so using an unbounded date range filter would provide the necessary data without causing performance issues.

- For a full set of 400 questions, Go to <https://skillcertpro.com/product/salesforce-data-architect-exam-questions/>
- SkillCertPro offers detailed explanations to each question which helps to understand the concepts better.
- It is recommended to score above 85% in SkillCertPro exams before attempting a real exam.
- SkillCertPro updates exam questions every 2 weeks.
- You will get life time access and life time free updates.
- SkillCertPro assures 100% pass guarantee in first attempt.

**Question 6:**

Universal Containers (UC) is a business that works directly with individual consumers (B2C). They are moving from a current home-grown CRM system to Salesforce. UC has about one million consumer records.

What should the architect recommend for optimal use of Salesforce functionality and also to avoid data loading issues?

- A. Load all individual consumers as Account records and avoid using the Contact object.
- B. Create a Custom Object Individual Consumer c to load all individual consumers.

You deserve this opportunity to win and try to make some difference in your life if you want to attend the Data-Architect exam and get the certification by the help of our Data-Architect practice braindumps. As we all know, all companies will pay more attention on the staffs who have more certifications which is a symbol of better understanding and efficiency on the job. Our Data-Architect Study Materials have the high pass rate as 98% to 100%, hope you can use it fully and pass the exam smoothly.

Salesforce Data-Architect Exam is a challenging exam that requires extensive knowledge of Salesforce data management concepts and principles. Data-Architect exam consists of multiple-choice questions and scenario-based questions that test a candidate's ability to design and manage complex data architectures on the Salesforce platform. Candidates must have a thorough understanding of data modeling, data integration, data governance, and data security. Passing Data-Architect exam requires extensive preparation, including studying the Salesforce Data-Architect exam guide, taking practice exams, and gaining practical experience in designing and implementing data solutions on the Salesforce platform.

To be eligible for the Salesforce Data-Architect exam, candidates must have a minimum of five years of experience in data architecture and management, including at least two years of experience working with the Salesforce platform. They must also hold one of the prerequisite certifications, such as Salesforce Certified Application Architect or Salesforce Certified System Architect. Passing the Salesforce Data-Architect Exam is a significant achievement that demonstrates a deep understanding of Salesforce data architecture and management, and it can open up new career opportunities in the field.

To prepare for the Salesforce Data-Architect certification exam, you should have a good understanding of Salesforce data architecture, database design, data modeling, data integration, and data management. You should also have experience in designing and implementing data solutions in Salesforce, using tools such as Salesforce Connect, Salesforce Data Loader, and Salesforce

Workbench. Salesforce offers several training courses and resources to help you prepare for the certification exam, including Trailhead modules, instructor-led training, and self-paced online learning.

## Data-Architect Exam Torrent Materials and Data-Architect Study Guide Dumps - PDF Torrent

Data-Architect Guide Quiz helped over 98 percent of exam candidates get the certificate. Before you really attend the Salesforce Data-Architect exam and choose your materials, we want to remind you of the importance of holding a certificate like this one. Obtaining a Salesforce Data-Architect certificate like this one can help you master a lot of agreeable outcomes in the future, like higher salary, the opportunities to promotion and being trusted by the superiors and colleagues.

### Salesforce Certified Data Architect Sample Questions (Q131-Q136):

#### NEW QUESTION # 131

Universal Containers (UC) requires 2 years of customer related cases to be available on SF for operational reporting. Any cases older than 2 years and upto 7 years need to be available on demand to the Service agents. UC creates 5 million cases per yr. Which 2 data archiving strategies should a data architect recommend? Choose 2 options:

- A. Sync cases older than 2 years to an external database, and provide access to Service agents to the database
- B. Use Big objects for cases older than 2 years, and use nightly batch to move them
- C. Use Heroku and external objects to display cases older than 2 years and bulk API to hard delete from Salesforce.
- D. Use custom objects for cases older than 2 years and use nightly batch to move them

Answer: B,C

#### NEW QUESTION # 132

Universal Containers (UC) is implementing a Salesforce project with large volumes of data and daily transactions. The solution includes both real-time web service integrations and Visualforce mash-ups with back-end systems. The Salesforce Full sandbox used by the project integrates with full-scale back-end testing systems. What two types of performance testing are appropriate for this project?

Choose 2 answers

- A. Post go-live automated page-load testing against the Salesforce Production org.
- B. Stress testing against the web services hosted by the integration middleware.
- C. Pre-go-live automated page-load testing against the Salesforce Full sandbox.
- D. Pre-go-live unit testing in the Salesforce Full sandbox.

Answer: B,C

#### NEW QUESTION # 133

US is implementing salesforce and will be using salesforce to track customer complaints, provide white papers on products and provide subscription (Fee) - based support.

Which license type will US users need to fulfil US's requirements?

- A. Lightning platform starter license.
- B. Service cloud license.
- C. Salesforce license.
- D. Sales cloud license

Answer: B

#### NEW QUESTION # 134

Universal Container (UC) has around 200,000 Customers (stored in Account object). They get 1 or 2 Orders every month from

each Customer. Orders are stored in a custom object called "Order c"; this has about 50 fields. UC is expecting a growth of 10% year-over-year. What are two considerations an architect should consider to improve the performance of SOQL queries that retrieve data from the Order\_c object? Choose 2 answers

- A. Make the queries more selective using indexed fields.
- B. Use SOQL queries without WHERE conditions.
- C. Reduce the number of triggers on Order\_c object.
- D. Work with Salesforce Support to enable Skinny Tables.

Answer: A,D

#### NEW QUESTION # 135

Universal Containers has a large number of Opportunity fields (100) that they want to track field history on. Which two actions should an architect perform in order to meet this requirement? Choose 2 answers

- A. Create a custom object to store a copy of the record when changed.
- B. Use Analytic Snapshots to store a copy of the record when changed.
- C. Create a custom object to store the previous and new field values.
- D. Select the 100 fields in the Opportunity Set History Tracking page.

Answer: A,C

Explanation:

Creating a custom object to store a copy of the record when changed and creating a custom object to store the previous and new field values are two possible actions that an architect can perform to meet the requirement of tracking field history on 100 Opportunity fields. A custom object can store more fields and records than the standard field history tracking feature, which has a limit of 20 fields per object and 18 or 24 months of data retention. A custom object can also be used for reporting and analysis of field history data. The other options are not feasible or effective for meeting the requirement

#### NEW QUESTION # 136
