You may have been learning and trying to get the Plat-Admn-202 certification hard, and good result is naturally become our evaluation to one of the important indices for one level. You need to use our Plat-Admn-202 exam questions to testify the knowledge so that you can get the Plat-Admn-202 Test Prep to obtain the qualification certificate to show your all aspects of the comprehensive abilities, and the Plat-Admn-202 exam guide can help you in a very short period of time to prove yourself perfectly and efficiently.

## Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Salesforce Fundamentals:</b> This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>App Deployment:</b> This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.</li> </ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Business Logic and Process Automation:</b> This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Data Modeling and Management:</b> This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>User Interface:</b> This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.</li> </ul>

## Check The Quality Of The Salesforce Plat-Admn-202 Exam Questions Demo

It is a virtual certainty that our Plat-Admn-202 actual exam is high efficient with passing rate up to 98 percent and so on. We made it by persistence, patient and enthusiastic as well as responsibility. Moreover, about some tricky problems of Plat-Admn-202 Exam Materials you do not to be anxious and choose to take a detour, our experts left notes for your reference. So our Plat-Admn-202 practice materials are beyond the contrivance of all of you.

### Salesforce Certified Platform App Builder Sample Questions (Q249-Q254):

#### NEW QUESTION # 249

Cloud Kicks received a new requirement to calculate summaries from child objects of a standard object. The team would prefer to solve this declaratively.

What are two considerations an app builder should evaluate?

Choose 2 answers

- A. An app builder is unable to change a look up to a master-detail relationship.
- **B. An object can have up to two master-detail relationships.**
- C. A trigger on save or update can kick off calculations.
- **D. A value is required in all records of the lookup field prior to converting to a master-detail relationship.**

**Answer: B,D**

Explanation:

When Cloud Kicks needs to calculate summaries from child objects of a standard object declaratively, a few key considerations about master-detail relationships come into play. Master-detail relationships are critical in Salesforce when working with roll-up summary fields, which allow you to calculate values from child records.

Option B: An object can have up to two master-detail relationships.

Salesforce allows an object to have two master-detail relationships. This is important because if you want to aggregate child record data using roll-up summary fields, you need to have a master-detail relationship in place. Each master-detail relationship links a child object to a parent, and you can create roll-up summary fields on the parent object to summarize the child record data.

Reference:

Option D: A value is required in all records of the lookup field prior to converting to a master-detail relationship.

One important consideration when converting a lookup relationship into a master-detail relationship is that the lookup field must

contain values for all existing child records. This is because master-detail relationships have tighter coupling between parent and child records, and a child cannot exist without a parent in a master-detail scenario. Thus, the field cannot be null during the conversion process.

Option A: An app builder can convert a lookup relationship to a master-detail relationship if the above condition (that all lookup fields are populated) is met, so this option is incorrect.

Option C: Triggers are part of custom development using Apex, and the question specifies the solution should be declarative. Therefore, triggers would not be a relevant declarative tool for this scenario.

#### NEW QUESTION # 250

Which two solutions prevent a formula field from being referenced by a Roll-Up Summary Field?

- A. The CASE () function in the formula field
- B. The NOW () function in the formula field
- C. A cross-object workflow updating a field referenced by the formula field
- D. A cross-object field reference in the formula field

**Answer: B,D**

Explanation:

A formula field cannot be referenced by a roll-up summary field if it contains a cross-object field reference or a time-based function. A cross-object field reference is a reference to a field from a different object, such as Account Name on a Contact object. A time-based function is a function that returns the current date or time, such as NOW() or TODAY(). Option A and C do not prevent a formula field from being referenced by a roll-up summary field.

#### NEW QUESTION # 251

Universal Containers has a private sharing model for Accounts and Opportunities and uses Territory Management to grant access to records.

\* Sales rep A manually shares an opportunity record with sales rep B.

\* Sales rep B has access to the Account even though the Account is NOT in sales rep B's territory.

\* Sales rep C CANNOT see either record.

Based on the information given, why can sales rep B see the Account related to the Opportunity?

- A. Sales rep B was added to the Account team
- B. Sharing set is granting access to the Account.
- C. Account was also manually shared.
- D. Sales rep B has implicit access to the Account.

**Answer: D**

Explanation:

Sales rep B has implicit access to the Account because of the manual sharing of the Opportunity. Implicit sharing grants access to parent records when a user has access to a child record. Sales rep B was not added to the Account team, sharing set is not applicable for private sharing model, and Account was not manually shared.

#### NEW QUESTION # 252

An app Builder creates an Account validation rule on the Industry field that will throw an error if the length of the field is longer than 6 characters. Another App Builder creates a workflow rule with a field update that sets the Industry field to Technology whenever the Billing City field is set to San Francisco. What will happen the next time a sales person saves an Account with a Billing City of San Francisco?

- A. The record will save and the Industry field will change to Technology
- B. The record will not save and the validation rule's error message will be displayed
- C. The record will not save and no error message will be displayed
- D. The record will save but the Industry field will not change to Technology

**Answer: B**
