Use ISTQB CTAL_TM_001 Dumps To Pass Exam Readily [2026]

Our ISTQB CTAL_TM_001 training materials are compiled by professional experts. All the necessary points have been mentioned in our ISTQB Certified Tester Advanced Level - Test Manager CTAL_TM_001 practice engine particularly. About some tough questions or important points, they left notes under them. Besides, our experts will concern about changes happened in ISTQB Certified Tester Advanced Level - Test Manager CTAL_TM_001 study prep all the time.

ISTQB Certified Tester Advanced Level - Test Manager Sample Questions (Q38-Q43):

NEW QUESTION # 38

You are working on a project that is having problems with regressions. With each release of software given to the test team, 50% of the defects found are actually regressions. To combat this you have decided to implement test automation. You have given your automation team the following goal

"Implement test automation to automate 90% of the manual regression tests before the product release date." Which of the following is likely an issue with this goal being defined as "SMART"?

- A. It is not relevant to the project objectives
- B. It is not measurable against the goals of the project
- C. it is not clear if this is achievable in the time allowed
- D. It is not specific on what needs to be done

Answer: C

Explanation:

Understanding SMART Goals:

SMART goals must be Specific, Measurable, Achievable, Relevant, and Time-bound.

The goal "automate 90% of the manual regression tests before the product release date" may not be achievable depending on the time constraints and resources available.

Evaluation of Options:

A is correct because the issue lies in whether automating 90% is feasible within the timeline.

B is incorrect as the goal is specific.

C is incorrect because automating regression tests is relevant to reducing regressions.

D is incorrect since the goal is measurable by the percentage of automation achieved.

Reference and Syllabus Alignment:

Aligned with ISTQB Advanced Test Management guidelines on goal setting and test automation strategies (TM-1.6.2).

NEW QUESTION # 39

What is the purpose of process improvement assessment models? [1]

- A. Ensure a consistent approach is used
- B. Assist in the hiring of new testers
- C. Identify the test tools needed for testing
- D. Model the failure modes of the product

Answer: A

Explanation:

Process improvement assessment models are designed to ensure a consistent approach is used in evaluating and improving processes within an organization. They provide a structured framework for assessing the current state of processes, identifying areas for improvement, and implementing changes in a systematic manner.

NEW QUESTION # 40

Your organization is considering using open-source tools. You have been told you need to be aware of the terms of the GNU general public license.

What is the basic concept of this license? [1]

- A. If you're going to distribute the software, you need to do so with the same terms as were applied when you received the software.
- B. A small license fee must be paid to the supplier of the software.
- C. Anyone can use the software anytime for any reason.
- D. You are allowed to use the software internally, but it cannot be incorporated into any product for which you will receive a profit.

Answer: A

Explanation:

The GNU General Public License (GPL) is a free, copyleft license that allows users to change and share all versions of a program. The basic concept of the GPL is that if you distribute the software, you must do so under the same license terms as when you received it. This ensures that the freedoms to use, study, share, and modify the software are preserved¹.

NEW QUESTION # 41

During what step of the Fundamental Test Process should you define the methods to be used to collect test metrics? [1]

- A. Closure

- B. Execution
- C. Analysis
- **D. Planning**

Answer: D

Explanation:

The correct answer is B. Planning. This is because test metrics are quantitative measures that are used to monitor and control the test process, and to evaluate the test results and quality. Test metrics should be defined during the planning step of the Fundamental Test Process, which is the activity of establishing the test objectives, scope, approach, resources, schedule, and deliverables. By defining the methods to be used to collect test metrics during the planning step, the test team can ensure that the test metrics are aligned with the test plan and the project goals, and that the data collection process is consistent and efficient. NEW QUESTION # 42

You are testing a new product that will turn on the windshield wipers of a car when the sensors detect there is moisture on the windshield. Depending on the information returned from the sensors, the wipers will be turned on at one of the following speeds: slow intermittent, medium intermittent, fast intermittent, slow constant, medium constant, fast constant. Your team has identified the following test condition:

Test Condition 1.1.1 - Verify that the windshield wipers can go from slow constant to fast constant speed when the amount of moisture increases appropriately.

Your team has defined the following steps for a test case for this test condition:

1. Set the moisture sensor to request slow constant
2. Increase the moisture to set the sensor to request fast constant
3. Verify that the wipers respond with fast constant speed

Given this information, which of the following statements is correct? [2]

- **A. The test case is traceable to the test condition and provides 100% statement coverage of the defined test condition.**
- B. This test case is traceable to the test condition and provides 100% requirements coverage of the defined test condition.
- C. This test case is not traceable to the test condition.
- D. There is not enough information in the test condition to define a test case.

Answer: A

Explanation:

The correct answer is D. The test case is traceable to the test condition and provides 100% statement coverage of the defined test condition. This is because the test case is derived from the test condition, and it covers all the possible outcomes of the test condition, such as the initial state, the input, and the expected output.

Statement coverage is a metric that measures the percentage of executable statements that are exercised by a test case. In this case, the test case exercises all the statements in the test condition, thus achieving 100% statement coverage. Statement Coverage - ISTQB not-for-profit association References: Certified Tester Advanced Level Test Manager (CTAL-TM) - ISTQB not-for-profit association, ISTQB Test Manager Certification - ISTQB Exams Worldwide - ISTQB Official Registration, Statement Coverage - ISTQB not-for-profit association

NEW QUESTION # 43

.....

If you always feel that you can't get a good performance when you come to the exam room. There is Software version of our CTAL_TM_001 exam braindumps, it can simulate the real exam environment. If you take good advantage of this CTAL_TM_001 practice materials character, you will not feel nervous when you deal with the Real CTAL_TM_001 Exam. Furthermore, it can be downloaded to all electronic devices so that you can have a rather modern study experience conveniently. Why not have a try?
