

New C-SEC-2405 Valid Exam Testking | Reliable SAP C-SEC-2405 Test Simulator: SAP Certified Associate - Security Administrator

241 Computer Science Certification Exam questions and answers 2025/2026

Bottom-Up Design - **answer**a design methodology that involves using existing programming libraries and APIs to design a system or application

API (Application Programming Interface) - **answer**the documented method and parameter interface for a software system component

Decision Diamond - **answer**the shape used in flowcharts that indicates a decision made in a program where an input situation is presented and the result is either true or false

Flowchart - **answer**a visual organizer system used to indicate the flow of a program, using procedure blocks, decision diamonds and arrows

Black Box - **answer**a device, system or object in computing which can be viewed in terms of its inputs and outputs, without requiring any knowledge of its internal workings

Method Library - **answer**a collection of predefined methods that can be used to build up a program

Modular Programming - **answer**a software design technique that emphasizes separating the functionality of a program into independent, interchangeable modules, such that each contains everything necessary to execute only one aspect of the desired functionality

Procedure Box - **answer**a symbol used in flowcharts that represents a process or event that occurs within the flow of the program

Software Systems Life Cycle - **answer**the stages of development for a software development project (analysis, design, development, testing and maintenance)

Stepwise Refinement - **answer**the incremental process of designing an application or procedure which starts by looking at the overall picture of the requirements, devising an initial solution/architecture, inspecting the solution or patterns, and iterating until the solution meets the objects or performance, clarity and quality

Holding a certification in a certain field definitely shows that one have a good command of the C-SEC-2405 knowledge and professional skills in the related field. However, the majority of the candidates for the C-SEC-2405 exam are those who do not have enough spare time. But our company can provide the anecdote for you--our C-SEC-2405 Study Materials. Under the guidance of our C-SEC-2405 exam practice, you can definitely pass the exam as well as getting the related certification with the minimum time and efforts. Our C-SEC-2405 exam questions will never let you down.

SAP C-SEC-2405 Exam Syllabus Topics:

| Topic | Details |
|---------|--|
| Topic 1 | <ul style="list-style-type: none"> Public Cloud User and Role Management: This section of the exam measures the skills of SAP IT cloud Professionals and covers managing users and roles in public cloud environments for SAP applications. |
| Topic 2 | <ul style="list-style-type: none"> Governance, Compliance, and Cybersecurity: This section of the exam measures the skills of compliance officers and covers the principles of governance, compliance, and cybersecurity of SAP systems. It includes understanding regulatory requirements and best practices for maintaining security. A critical skill evaluated is ensuring organizational compliance with relevant laws and policies. |

| | |
|---------|---|
| Topic 3 | <ul style="list-style-type: none"> • SAP Fiori Authorizations and SAP S • 4HANA: This section of the exam measures the skills of SAP Developers and covers authorization management specific to SAP Fiori applications within SAP S • 4HANA. It emphasizes configuring authorizations for Fiori apps to ensure appropriate access levels. A key skill assessed is understanding Fiori authorization concepts to enhance user experience. |
| Topic 4 | <ul style="list-style-type: none"> • Authorization and Role Maintenance: This section of the exam measures the skills of SAP administrators and covers the management of user authorizations and roles within SAP systems. It emphasizes the processes involved in defining, maintaining, and approving roles to ensure secure access. A key skill assessed is managing role authorizations effectively to mitigate access risks. |

SAP - The Best C-SEC-2405 - SAP Certified Associate - Security Administrator Valid Exam Testking

After so many years' development, our C-SEC-2405 exam torrent is absolutely the most excellent than other competitors, the content of it is more complete, the language of it is more simply. Once you use our C-SEC-2405 latest dumps, you will save a lot of time. High effectiveness is our great advantage. After twenty to thirty hours' practice, you are ready to take the real C-SEC-2405 Exam Torrent. The results will never let you down. You just need to wait for obtaining the certificate.

SAP Certified Associate - Security Administrator Sample Questions (Q65-Q70):

NEW QUESTION # 65

Which of the following can you use to check if there is an application start lock on an application contained in a PFCG role? Note: There are 2 correct answers to this question.

- A. Transaction SM01_DEV
- B. Transaction SUIM - Executable Transactions report
- C. Transaction SUIM - Transactions Executable with Profile report
- D. Transaction SM01_CUS

Answer: B,C

Explanation:

To check if there is an application start lock on an application within a PFCG role, the SUIM (System User Information System) reports "Executable Transactions report" and "Transactions Executable with Profile report" are used. The Executable Transactions report (transaction SUIM) identifies transactions within a role and can indicate if any are locked, preventing their execution, by cross-referencing with system lock settings.

The Transactions Executable with Profile report analyzes transactions executable via a role's profile, highlighting any locked transactions that would block application starts. These reports provide detailed insights into role-based access and lock status, ensuring administrators can verify application availability.

Transaction SM01_CUS is used for locking transactions system-wide, not for checking role-specific locks, and SM01_DEV is not a standard SAP transaction for this purpose. By leveraging SUIM reports, administrators can efficiently manage and troubleshoot application access, ensuring that PFCG roles align with security requirements and that locked applications do not disrupt business processes.

NEW QUESTION # 66

What happens to data within SAP Enterprise Threat Detection during the aggregation process? Note: There are 3 correct answers to this question.

- A. It is prioritized.
- B. It is normalized.
- C. It is enriched.
- D. It is pseudonymized.

- E. It is categorized.

Answer: B,C,D

Explanation:

During the aggregation process in SAP Enterprise Threat Detection, data undergoes several transformations to enhance security analysis. It is pseudonymized, replacing sensitive identifiers (e.g., user IDs) with pseudonyms to protect privacy while maintaining data utility for threat detection. Data is normalized, converting heterogeneous data formats from various sources into a standardized structure, ensuring consistency for analysis across systems. Additionally, data is enriched by adding contextual information, such as system metadata or threat intelligence, to improve the accuracy of threat identification. These processes enable SAP Enterprise Threat Detection to efficiently analyze large volumes of data while safeguarding sensitive information. Prioritization is not part of aggregation, as it relates to post-analysis actions, and categorization occurs during analysis, not aggregation. By pseudonymizing, normalizing, and enriching data, SAP Enterprise Threat Detection ensures robust threat detection capabilities, supporting real-time monitoring and compliance with data protection regulations in SAP environments.

NEW QUESTION # 67

What are some security safeguards categories? Note: There are 3 correct answers to this question.

- A. Physical
- B. Access Control
- C. Organizational
- D. Technical
- E. Financial

Answer: A,C,D

Explanation:

Security safeguards in SAP systems are categorized to address various aspects of system protection. Physical safeguards involve securing physical infrastructure, such as data centers and hardware, to prevent unauthorized access or damage. Organizational safeguards include policies, procedures, and training to ensure that personnel follow security best practices, fostering a culture of compliance. Technical safeguards encompass tools and technologies, such as encryption, firewalls, and authorization controls, to protect system data and processes from cyber threats. These categories collectively form a comprehensive security framework. Access Control, while critical, is a subset of technical safeguards rather than a standalone category, and Financial safeguards are not a recognized category in SAP's security framework, as they pertain more to business processes than security measures. These distinctions ensure a holistic approach to securing SAP environments.

NEW QUESTION # 68

Which solution is NOT used to identify security recommendations for the SAP Security Baseline?

- A. SAP Security Notes
- B. SAP Security Optimization Service
- C. SAP EarlyWatch Alert
- D. SAP Code Vulnerability Analyzer

Answer: D

Explanation:

* Context: SAP Security Baseline provides a framework for securing SAP systems. Identifying baseline gaps requires solutions designed for configuration, performance, and system hardening insights.

* Solution Descriptions:

* SAP Code Vulnerability Analyzer is designed to detect vulnerabilities in application code but does not assess the Security Baseline directly.

* SAP EarlyWatch Alert, SAP Security Optimization Service, and SAP Security Notes directly provide recommendations or insights relevant to the baseline.

SAP Security References:

* SAP Security Baseline Documentations

* SAP Help Portal for Security Optimization and Notes Guidelines

NEW QUESTION # 69

What are some security safeguards categories? Note: There are 3 correct answers to this question.

- A. Physical
- B. Organizational
- C. Access Control
- D. Technical
- E. Financial

Answer: A,C,D

NEW QUESTION # 70
