You can give unlimited practice tests and improve yourself daily to achieve your desired destination.

## ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q95-Q100):

**NEW QUESTION # 95**
Which of the choices below is true about parsing strategies?
Response:

- A. Custom parsing strategies are JavaScript files.
- B. It is not possible to have a custom parsing strategy.
- C. Custom parsing strategies are available for Service Mapping only.
- D. Custom parsing strategies are HTML files.

**Answer: A**

**NEW QUESTION # 96**
What do most Discovery properties start with?

- A. discovery.prop
- B. glide.discovery
- C. glide.itom
- D. disco.release

**Answer: B**

Explanation:
In ServiceNow Discovery, most properties related to the Discovery module start with the prefix
'glide.discovery'. This naming convention is part of ServiceNow's system property design, where 'glide' typically indicates system properties and 'discovery' specifies that the property is related to the Discovery module. Properties are used to configure various aspects of the Discovery process, such as behavior, timeouts, and performance settings.

**NEW QUESTION # 97**
What is found on the far-right section of the Pattern Designer for horizontal patterns? (Choose two.)

- A. Operations
- B. CMDB Dashboard
- C. Temporary Variables
- D. CI Attributes

**Answer: A,C**

Explanation:
The Pattern Designer is a graphical tool that allows users to create and edit horizontal discovery patterns. The Pattern Designer has three main sections: the left section shows the CI type and the pattern type, the middle section shows the pattern steps and the flow diagram, and the far-right section shows the details of the selected step or operation. The far-right section can display the following tabs, depending on the type of step or operation selected12:
* Operations: This tab shows the list of available operations that can be added to the pattern, such as Execute Command, Parse File, Set Parameter Value, etc. Operations are the basic building blocks of a pattern that perform specific actions on the target device or the MID Server.
* CI Attributes: This tab shows the list of attributes that can be set or updated for the CI type of the pattern, such as name, serial number, manufacturer, etc. CI attributes are used to populate the CI record in the CMDB with the information collected by the pattern.
* Temporary Variables: This tab shows the list of temporary variables that can be created or used by the pattern, such as $result, $output, $user_var, etc. Temporary variables are used to store and manipulate data within the pattern, such as the output of a command, the value of a parameter, or the result of a calculation.
* CMDB Dashboard: This tab shows the CMDB dashboard that displays the CI record and its related lists, such as relationships, identification rules, sensors, etc. The CMDB dashboard is used to preview and verify the outcome of the pattern on the CI record in the CMDB.

* 2: ServiceNow Discovery Overview, page 11

## NEW QUESTION # 98
Which choice best describes a Functionality Definition?

- A. Defines what protocols to detect from within a Behavior.
- B. Defines the IP addresses to discover.
- C. Defines what Behavior to use from a Discovery Schedule.
- D. Defines what CI identifiers to use.

**Answer: C**

Explanation:
A Functionality Definition is a configuration record that defines what protocols to detect from within a Behavior. A Behavior is a set of Functionality Definitions that Discovery uses to identify and explore a device or application. A Functionality Definition specifies the order, type, and parameters of the probes that Discovery launches to gather information about a device or application12.
:
Functionality Definition
Behavior

## NEW QUESTION # 99
For the Parse Variable pattern operation, what is required to have two different parsing methods to populate variables?

- A. Two different Debug Mode sessions.
- B. A tabular and a scalar variable.
- C. Two different steps.
- D. Two different Define Parsing selections on the same step.

**Answer: C**

Explanation:
The Parse Variable pattern operation allows you to extract information from the output of a previous operation and save it in a variable. You can choose from different parsing methods, such as JSON File, XML File, Regular Expression, or Custom Script. To have two different parsing methods to populate variables, you need to use two different steps, each with a different Define Parsing selection. For example, you can use one step to parse a JSON file and another step to parse an XML file. You cannot use two different parsing methods on the same step, as the Define Parsing selection is unique for each step.
References:
* Parse command output: This article explains how to use the Parse command output operation and the different parsing methods available.
* Pattern Designer: Parse Variable - JSON File gives error: This article provides a troubleshooting tip for using the JSON File

parsing method.
* Examples of EVAL scripts used in Discovery patterns: This article provides some examples of custom scripts that can be used for the Custom Script parsing method.

**NEW QUESTION # 100**
