Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q525-Q530):

NEW QUESTION # 525
A company is concerned that two NAT instances in use will no longer be able to support the traffic needed for the company's application. A solutions architect wants to implement a solution that is highly available fault tolerant, and automatically scalable What should the solutions architect recommend?

- A. Replace the two NAT instances with Spot Instances in different Availability Zones and deploy a Network Load Balancer.

- B. Remove the two NAT instances and replace them with two NAT gateways in the same Availability Zone.
- C. Use Auto Scaling groups with Network Load Balancers for the NAT instances in different Availability Zones.
- D. Remove the two NAT instances and replace them with two NAT gateways in different Availability Zones.

Answer: D

NEW QUESTION # 526

A solutions architect needs to connect a company's corporate network to its VPC to allow on-premises access to its AWS resources. The solution must provide encryption of all traffic between the corporate network and the VPC at the network layer and the session layer. The solution also must provide security controls to prevent unrestricted access between AWS and the on-premises systems.

Which solution meets these requirements?

- A. Configure AWS Transit Gateway to connect to the VPC. Configure route table entries to direct traffic from on premises to the VPC. Configure instance security groups and network ACLs to allow only required traffic from on premises.
- B. Configure AWS Site-to-Site VPN to connect to the VPC. Configure route table entries to direct traffic from on premises to the VPC. Configure instance security groups and network ACLs to allow only required traffic from on premises.
- C. Configure AWS Direct Connect to connect to the VPC. Configure the VPC route tables to allow and deny traffic between AWS and on premises as required.
- D. Create an IAM policy to allow access to the AWS Management Console only from a defined set of corporate IP addresses Restrict user access based on job responsibility by using an IAM policy and roles

Answer: B

Explanation:
This solution meets the requirements of providing encryption at both the network and session layers while also allowing for controlled access between on-premises systems and AWS resources.
AWS Site-to-Site VPN: This service allows you to establish a secure and encrypted connection between your on-premises network and AWS VPC over the internet or via AWS Direct Connect. The VPN encrypts data at the network layer (IPsec) as it travels between the corporate network and AWS.
Routing and Security Controls: By configuring route table entries, you can ensure that only the traffic intended for AWS resources is directed to the VPC. Additionally, by setting up security groups and network ACLs, you can further restrict and control which traffic is allowed to communicate with the instances within your VPC. This approach provides the necessary security to prevent unrestricted access, aligning with the company's security policies.
Why Not Other Options?:
Option A (AWS Direct Connect): While Direct Connect provides a private connection, it does not inherently provide encryption. Additional steps would be required to encrypt traffic, and it doesn't address the session layer encryption.
Option B (IAM policies for Console access): This option does not meet the requirement for network-level encryption and security between the corporate network and the VPC.
Option D (AWS Transit Gateway): Although Transit Gateway can help in managing multiple connections, it doesn't directly provide encryption at the network layer. You would still need to configure a VPN or use other methods for encryption.

NEW QUESTION # 527

The Amazon EC2 web service can be accessed using the _____ web services messaging protocol. This interface is described by a Web Services Description Language (WSDL) document.

- A. XML-RPC
- B. SOAP
- C. CORBA
- D. DCOM

Answer: B

NEW QUESTION # 528

A company is developing a monolithic Microsoft Windows based application that will run on Amazon EC2 instances. The application will run long data-processing jobs that must not be in-terrupted. The company has modeled expected usage growth for the next 3 years. The company wants to optimize costs for the EC2 instances during the 3-year growth period.

- A. Purchase an EC2 Instance Savings Plan with a 3-year commitment. Adjust the hourly com-mitment based on the plan recommendations.
- B. Deploy the application on EC2 Spot Instances. Use an Auto Scaling group with a minimum size of 1 to ensure that the application is always running.
- C. Purchase a Compute Savings Plan with a 3-year commitment. Adjust the hourly commit-ment based on the plan recommendations.
- D. Purchase a Compute Savings Plan with a 1-year commitment. Renew the purchase and adjust the capacity each year as necessary.

Answer: C

Explanation:
For steady, predictable EC2 usage with potential changes in instance families over time, AWS recommends Savings Plans. Compute Savings Plans "apply to any EC2 instance regardless of region, instance family, operating system, or tenancy," and also apply to AWS Fargate and AWS Lambda, delivering the most flexibility over a multi-year horizon. A 3-year term provides the highest discount among Savings Plans for long-lived workloads. EC2 Instance Savings Plans are limited to a chosen instance family in a region; as needs evolve (e.g., size or family changes), discounts may not fully apply. Spot Instances are not appropriate for long, interruption-sensitive jobs because Spot capacity can be reclaimed with short notice. Therefore, a Compute Savings Plan (3-year) best matches cost optimization with flexibility for growth and changes.

NEW QUESTION # 529
Application developers have noticed that a production application is very slow when business reporting users run large production reports against the Amazon RDS instance backing the application. the CPU and memory utilization metrics for the RDS instance-d not exceed 60% while the reporting queries are running. The business reporting users must be able to generate reports without affecting the applications performance.
Which action will accomplish this?

- A. Create a read replica and connect the application to it.
- B. Create a read replication and connect the business reports to it.
- C. Increase the size of the RDS instance
- D. Enable multiple Availability Zones on the RDS instance

Answer: B
