## Plat-Admn-301 Latest Study Questions, Plat-Admn-301 Dumps Reviews

The RealValidExam is one of the top-rated and leading platforms that offer real and exam trainers verified Salesforce Certified Platform Administrator II Plat-Admn-301 practice test questions. These Salesforce Certified Platform Administrator II Plat-Admn-301 exam questions are designed after deep research and verified by qualified Salesforce Plat-Admn-301 exam preparation experts. So rest assured that you will get the top-notch RealValidExam Plat-Admn-301 exam questions. These RealValidExam Plat-Admn-301 exam questions are the ideal Salesforce Certified Platform Administrator II Plat-Admn-301 exam preparation material that will prepare you to perform well for the final Salesforce Certified Platform Administrator II Plat-Admn-301 Certification Exam. So rest assured that with the RealValidExam Plat-Admn-301 exam questions you will get everything that is necessary for Plat-Admn-301 exam preparation and success. Take a decision right now and just get registered in Salesforce Plat-Admn-301 certification exam and start preparation with RealValidExam Plat-Admn-301 exam questions. The RealValidExam is committed since the beginning to

offer the top-notch Salesforce Certified Platform Administrator II Plat-Admn-301 exam questions to Salesforce Certified Platform Administrator II Plat-Admn-301 exam candidates.

## Salesforce Certified Platform Administrator II Sample Questions (Q183-Q188):

### NEW QUESTION # 183

A previous consultant helped Universal Containers automate many of its business processes. The administrator changed the email address on the consultant's user record and deactivated it. The consultant called to say they continue to get email messages from failed flows and processes.

What steps should the administrator perform to stop the fault messages from going to the consultant?

- A. Export Flow Interviews filtered by LastModifiedBy.email using Data Loader. In the .csv file, change LastModifiedBy to the System Admin and upload changes with Data Loader.
- **B. Set Send Process or Flow Error Email' to Apex Exception Email Recipients' in Automation settings. Add the System Admin's email to the Apex Exception Email page in Setup.**
- C. Request an Email Log from Email Log Files in Setup and filter the request by the consultant's email. Manually update any flows or processes listed on the log.
- D. Create a custom metadata type and associate the LastModifiedBy field. Write a flow that updates the field in any flows or processes equal to the consultant's name.

**Answer: B**

Explanation:

This option will allow the administrator to change the recipient of the fault messages from the consultant's email to the system admin's email without modifying any flows or processes. The other options are either not feasible or not effective. References:

### NEW QUESTION # 184

Cloud Kicks uses a Lightning web component to provide instructions to sales reps. An administrator needs to correct a spelling error in the displayed text in one of the Lightning web components.

What is the recommended tool to make the change?

- A. Salesforce Lightning Inspector
- B. Developer Console
- **C. VisualStudio Code**
- D. Developer Org

**Answer: C**

Explanation:

VisualStudio Code is a recommended tool to make the change in the displayed text in one of the Lightning web components.

VisualStudio Code is an integrated development environment (IDE) that supports Salesforce development tools such as Salesforce Extensions for Visual Studio Code, Salesforce CLI, and Lightning Web Components. You can use VisualStudio Code to create, edit, debug, and deploy Lightning web components and other Salesforce metadata. To make the change in the displayed text, you need to open the HTML file of the Lightning web component in VisualStudio Code and modify the text element accordingly.

### NEW QUESTION # 185

users at Northern Trail Outfitters have a lot of fields on their new account records because they track their accounts and competitors on the Account object. For accounts created for customers, they need access to different fields than the accounts used to track competitors. For partner accounts, they need different values in the Industry field.

What should the administrator use to resolve the issues?

- A. Required Fields
- B. Business Processes

- C. Record Types
- D. Flow Builder

**Answer: C**

Explanation:

record types allow administrators to offer different business processes, picklist values, and page layouts to different users based on their profiles. By using record types for accounts and contacts at AW Computing, administrators can track their accounts and competitors on different record types with different fields on their page layouts. For partner accounts, they can also use record types to specify different values in the Industry picklist field. References: [https://help.salesforce.com/s/articleView?id=sf.customize\\_recordtype.htm&type=5](https://help.salesforce.com/s/articleView?id=sf.customize_recordtype.htm&type=5)

#### NEW QUESTION # 186

The administrator at Cloud Kicks has been asked to delete a large number of quote line items. They receive a .csv file with the record IDs to be deleted. The administrator uses Data Loader to delete them and selects Use Bulk API. When the job runs, every record shows an 'entity is deleted' error in the error file that is created. What is the reason for the error?

- A. This is the standard error message when records are deleted using Bulk API.
- B. One of the IDs in the batch referenced a record that was in the recycle bin.
- C. The batch size selected was greater than the 200 record limit.
- D. Deleting with Data Loader can only be done in Batch API mode.

**Answer: B**

Explanation:

One of the IDs in the batch referenced a record that was in the recycle bin because deleting records with Bulk API does not delete records permanently but moves them to the recycle bin. Therefore, if a record ID in the batch matches an existing record ID in the recycle bin, an 'entity is deleted' error will occur.

#### NEW QUESTION # 187

Cloud Kicks (CK) has a backup team of employees that helps short-staffed departments. These users could be working with sales one day and service the next. CK is implementing new Lightning record pages for each department so that they view records in a way that makes sense for each department.

How should the administrator ensure this is configured correctly?

- A. Adjust the profile of the backup users each day to align with the proper access they require.
- B. Allow the backup team users to update their own profile with Delegated Administration.
- C. Configure one app per department and activate record pages for each app.
- D. Create permission sets for each department and assign them to the backup team users.

**Answer: C**

Explanation:

Configuring one app per department and activating record pages for each app will ensure that users view records in a way that makes sense for each department. An app is a collection of items that work together to serve a particular function. An app can have different record pages for different objects and profiles. By activating record pages for each app, the administrator can customize what users see based on their app context.
